STATISTICS (III)

Land Area (Sq. Statute Miles): 61

Shoreline (More than 200 meters to opposite shore): None

Shoreline (Less than 200 meters to opposite shore): None

Recoverable Topographic Stations established: None

Number of Temporary Hydrographic Stations located by radial plot:

None

Leveling (to control contours) - miles: 2

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record, give the surname and initials (not initials only).

Remarks:

Contours by Henry M. Eldridge
General Procedure in the Production of Topographic Quadrangles for the War Department

This quadrangle, together with similar adjoining maps produced under Project C.S.284, was prepared by the Coast and Geodetic Survey for the War Department under "General Specifications for War Department Mapping Program" issued about December 1941, in which is incorporated the "Standard of Accuracy for a National Map Production Program" issued by the Bureau of the Budget under date of June 10, 1941.

The general procedure in the production of this and the adjoining quadrangles was:

FIELD SURVEYS

Aerial photography with the Coast and Geodetic Survey nine-lens camera, with airplane and flight crew furnished by the U. S. Coast Guard. The photographs were taken to the scale of 1:20,000.

Ground inspection of the photographs for identification of control points, and classification and clarification of planimetric details on the photographs.

Contouring by planetable directly on the photographs. Supplementary vertical control was established by means of an extensive subordinate level net, furnishing unmarked elevations at road intersections, driveways, and numerous other points identifiable on the photographs.

COMPILATION OF MANUSCRIPT

Compilation on the map manuscripts by radial plot methods (celluloid hand templets) of all planimetry and contours. These manuscripts were drawn on the scale of 1:20,000 on celluloid sheets on which polyconic projections had been ruled with the Projection Ruling Machine in the Washington Office. Compilation was accomplished in the Baltimore Tampa Photogrammetric Office.

FIELD EDIT

Comparison of a copy of the manuscript with the ground. This included inspection for completeness and accuracy as well as the location by planetable methods of additional details, checking of nautical and aeronautical aids to navigation, etc.
Accuracy Tests - Application of systematic horizontal and vertical accuracy tests to check the maps for conformity with the specifications. These tests consisted of comparison of the map position and elevation of selected random points with the true position and elevation as independently determined by standard survey methods.

PROCESSING IN THE WASHINGTON OFFICE

Review - Examination of the manuscript for accuracy and completeness of compilation and compliance with specifications, correcting where necessary; addition of military and state grids and other special features; and verification of the general adequacy of the manuscript as a basis for the production of a finished map.

Drafting and Reproduction - Preparation of smooth color separation drawings on 1:20,000 scale on metal-mounted "blueline" copies of the manuscript. From these drawings, negatives and printing plates were prepared for reproduction of the finished map on the scale of 1:31,680 or 1:25,000.
FIELD INSPECTION REPORT
QUADRANGLE T-6190
PROJECT CS-284
F. L. Gallen, Chief of Party

1. DESCRIPTION OF AREA

The area covered by this quadrangle in general is undeveloped land. The north section has several farms on the higher ground, the lower ground being mostly swamp. The central and western section is quite flat and poorly drained. The eastern section is quite hilly, and very well drained. There are numerous ponds and depressions on the ridge between Allen Creek and Moore's Creek. Drainage for this area follows a well-defined pattern. Mill Creek and Dorns Creek which are tributaries to Town Creek drain the northern section of the area. Allen Creek and Moore Creek drain the central and eastern section of the area. Several bays which are flat wet weather swamps appear in different sections of the area and the drainage from them has been delineated on the photographs.

2-3. See the report for Quadrangle 8185.

4-5. See the report for Quadrangle 8184.

6. See the report for Quadrangle 8185.

7-13. These items do not apply to this quadrangle.

14-15-16. See the report for Quadrangle 8184.

17. This quadrangle lies entirely in Brunswick County, North Carolina. Only political boundaries will apply and these will be added by the field edit party.

18. See the report for Quadrangle 8184.

19. Junctions with Quadrangle 8184 to the north, 8197 to the south and 8191 to the west are all on overlapping photographs. The junctions have been checked in the field and should be satisfactory. There is no modern survey to the east.

Reviewed and Approved
F. L. Gallen
Chief of Party

Submitted by:
Henry Mc Eldridge
Senior Photogrammetric Aid
There are ten U.S. Coast & Geodetic Survey Triangulation Stations used to establish secondary control and detail points. Two of these Triangulation Stations are within the limits of this map manuscript and eight are just outside the limits.

Those stations within the limits are:

MILL, 1932
FUNSTON, 1942

Those stations just outside the limits are:

BOLIVIA, 1942
WINNABOW, 1942
IN, 1917
OAKS, 1917
ORTON CHURCH CUPOLA, 1917
EAST GABLE OF ORTON BARN, 1917
RUINS, 1917
CYRESS, 1932

In order to facilitate the identification of horizontal control on the office photographs, the field party established Field Inspection Stations at well-defined points, near the following triangulation stations.

OAKS, 1917
RUINS, 1917
CYRESS, 1932
FUNSTON, 1942
WINNABOW, 1942

These Field Inspection Stations are shown by circles in orange ink on the glossy side of the map manuscript.

RADIAL PLOT:

The radial plot for this map manuscript is described in Section 4 of the descriptive report for the Radial Plots of Projects CS-275 and CS-284, which has been submitted to the Washington Office.

DETAILING:

Nine lens unmounted office photographs were used in detailing this map manuscript.
DETAILING: (cont'd)

Drainage throughout the area of this map manuscript was very obscure and the field party's interpretation was accepted, after verification, by stereoscopic examination of the office photographs.

Two unusually wide and well-defined lanes not indicated by field inspection were noted on the office photographs. These were interpreted as fire lanes, by the compilation office, and are shown on the map manuscript by dashed black lines.

The compiler was able to interpret the office photographs satisfactorily from the data furnished by the field inspection party.

SUPPLEMENTAL DATA:

There are no previous topographic surveys covering the area of this map manuscript available to the compilation office.

The field party furnished the compilation office with a blue-line print of the State Highway & Public Works Commission Highway Map of Brunswick County, scale 1" = 1 mile.

Paragraphs 30 to 36 do not apply to this map manuscript.

GEOGRAPHIC NAMES:

A list of Geographic names is attached to this descriptive report showing undisputed, disputed and recommended geographic names. Undisputed geographic names only, are shown on the map manuscript.

DISCREPANCY OVERLAY:

A discrepancy overlay has been prepared to accompany this map manuscript. On it are notes calling the attention of the field edit party to additional information needed to make this map manuscript complete. Questions concerning correct interpretation, comments, and such notes as are deemed likely to be of assistance during the field edit are also included. The numbers of all bench marks are shown for the convenience of the Baltimore Compilation Office, in scaling the geographic positions from the red-line print.

HORIZONTAL ACCURACY:

The horizontal accuracy of the location of well-defined and less
39 **HORIZONTAL ACCURACY: (cont'd)**

Well-defined points of detail is believed to be within the limits set forth in the instructions for Project CS-264, paragraph 59, dated July 15, 1942.

40 **RECOMMENDATIONS FOR FUTURE SURVEYS:**

The planimetric detail as presented on this map manuscript is believed to be complete, but is subject to field edit for corrections, additions and deletions.

41 **JUNCTIONS:**

Complete and satisfactory junctions have been made as follows:

- To the North with map manuscript for Survey No. T-8197
- To the South with map manuscript for Survey No. T-8197
- To the West with map manuscript for Survey No. T-8191

To the East, a comparison of junctions was made with the Corps of Engineers, U. S. Army, Tactical Map, Wilmington Quadrangle, N. C. Junction was in disagreement at the following points:

Disagreement at junction with the location of Orton Pond.

- Marsh at Latitude 34° 02' 20" and Longitude 78° 00' is shown as water area. A marsh area is shown bordering this water area.

- At Latitude 34° 05' 10" and Longitude 78° 00' Funston road is not in agreement.

- Detail is not complete on quadrangle north of Latitude 34° 05' at Longitude 78° 00'.

- Contours are in complete disagreement.

42 **REMARKS:**

The field party has furnished an adequate description of the area covered by this map manuscript, in the field report which is attached to the compilation office descriptive report.

44 **COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES:**

No Topographic Quadrangles of this area were available to the compilation office.

44. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES: (cont'd)

A general comparison was made with a blue-line print of the N.C. State Highway and Public Works Commission map of Brunswick County. Lack of minute detail on this map does not permit an accurate comparison. However, common roads are in fair agreement.

45. COMPARISON WITH NAUTICAL CHARTS:

There are no nautical charts which cover the area of this map manuscript.

The handwritten note in the image reads: **CHECK or WRITE**.
Between January, 1942 and July, 1944, this Bureau completed 323 quadrangles. These maps have been published, or are in the process of being published on scales of 1:31,680 or 1:25,000. This series of quadrangles includes a land area of approximately 15,000 square miles. Incident to this work, a considerable volume of survey records and data has accumulated which will be filed for future reference. This material is filed as follows:

Registered and Filed in the Vault

Cloth-mounted copy of the published quadrangle.
- published quadrangle at 1:20,000 scale

Black and white cloth-mounted copy of the map manuscript. This copy is filed to preserve original survey detail shown on the manuscript at 1:20,000 scale which may not have been shown on the published sheet. For political boundaries, woodland, marsh, and swamp limits, refer to the published quadrangle for the finally adopted positions.

Descriptive Report.

Division

Filed in the Photogrammetric Section—Surveys Branch

Field inspection photographs.

Contoured photographs (on which planestable contouring work was performed.)

Field edit sheet.

Descriptions of recoverable topographic stations (Form 524), filed in Reviewing Unit.

Supplementary traverse and level records.

Field notes, computations, lists of positions, and tabulations of results of horizontal and vertical accuracy tests.

Reproduction proof.

Correction sheet (copy of quadrangle showing in red changes to be made when next printed.)

Check lists of work performed on each sheet in the Washington Office during review, drafting, edit, and reproduction.

Original celluloid manuscript.
Copies of specifications and all instructions to field parties and field offices.

*Filed in Reproduction Branch*

Glass negatives of the color separation drawings.

*Filed in the Library*

Special report on field work by Commander K. T. Adame, 1944.

Special report on office work by B. G. Jones, 1944.

Season's report on field work by Commander F. L. Gallen, 1944.

Season's report on field work by Commander R. L. Schoppe, 1944.

*Delivered to the Army Map Service in accordance with the contract*

Film negatives and film positives of the color separation drawings.

All color separation drawings.

*Original celluloid manuscript*

A correction sheet consisting of a copy of the first edition of the quadrangle with notes in red indicating changes desirable at the next printing.
DIVISION OF CHARTS
SURVEYS BRANCH

REVIEW OF AIR PHOTOGRAPHIC SURVEY T-8190

FUNSTON QUADRANGLE

This quadrangle manuscript has been examined for completeness, accuracy, and conformity with the specifications. It is adequate for smooth drafting, reproduction and publication. Revisions found to be necessary in this office are discussed on the next page.

Horizontal and Vertical Accuracy

For the nearest vertical accuracy test see the descriptive report on survey T-3184.

There is no horizontal accuracy test in this area.

Previous Surveys

This manuscript has been compared with the following previous topographic surveys of this Bureau and other agencies. This map is satisfactory to supersede the previous surveys over the common area.

There are no previous topographic surveys in this area.

Comparison with Nautical Charts Nos.

The manuscript has not been applied to the charts at the date of this review. The following comments are pertinent to the compilation and correction of nautical charts:

There are no nautical charts which cover the area of this map manuscript.
The following revisions of the map manuscript were found to be necessary and were accomplished as a part of this review:

Only changes of a minor nature were necessary during the review of this map manuscript.
