STATISTICS (III)

Land Area (Sq. Statute Miles): 58

Shoreline (More than 200 meters to opposite shore): None

Shoreline (Less than 200 meters to opposite shore): None

Number of Recoverable Topographic Stations established: 2

Number of Temporary Hydrographic Stations located by radial plot: none

Statute
Leveling (to control contours) -/miles: 36

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Remarks:
General Procedure in the Production of Topographic Quadrangles for the War Department

This quadrangle, together with similar adjoining maps produced under Project C.S. 284, was prepared by the Coast and Geodetic Survey for the War Department under "General Specifications for War Department Mapping Program" issued about December 1941, in which is incorporated the "Standard of Accuracy for a National Map Production Program" issued by the Bureau of the Budget under date of June 10, 1941.

The general procedure in the production of this and the adjoining quadrangles was:

FIELD SURVEYS

Aerial photography with the Coast and Geodetic Survey nine-lens camera, with airplane and flight crew furnished by the U. S. Coast Guard. The photographs were taken to the scale of 1:20,000.

Ground inspection of the photographs for identification of control points, and classification and clarification of planimetric details on the photographs.

Contouring by planetable directly on the photographs. Supplementary vertical control was established by means of an extensive subordinate level net, furnishing unmarked elevations at road intersections, driveways, and numerous other points identifiable on the photographs.

COMPILATION OF MANUSCRIPT

Compilation on the map manuscripts by radial plot methods (celluloid hand templets) of all planimetry and contours. These manuscripts were drawn on the scale of 1:20,000 on celluloid sheets on which polyconic projections had been ruled with the Projection Ruling Machine in the Washington Office. Compilation was accomplished in the Baltimore Temple Photogrammetric Office.

FIELD EDIT

Comparison of a copy of the manuscript with the ground. This included inspection for completeness and accuracy as well as the location by planetable methods of additional details, checking of nautical and aeronautical aids to navigation, etc.
Accuracy Tests - Application of systematic horizontal and vertical accuracy tests to check the maps for conformity with the specifications. These tests consisted of comparison of the map position and elevation of selected random points with the true position and elevation as independently determined by standard survey methods.

PROCESSING IN THE WASHINGTON OFFICE

Review - Examination of the manuscript for accuracy and completeness of compilation and compliance with specifications, correcting where necessary; addition of military and state grids and other special features; and verification of the general adequacy of the manuscript as a basis for the production of a finished map.

Drafting and Reproduction - Preparation of smooth color separation drawings on 1:20,000 scale on metal-mounted "blueline" copies of the manuscript. From these drawings, negatives and printing plates were prepared for reproduction of the finished map on the scale of 1:31,680 or 1:25,000.
FIELD INSPECTION REPORT
QUADRANGLE T-8202
PROJECT CS-284
F. L. CALLAHAN, CHIEF OF PARTY.

1. The area covered by this quadrangle is generally low and swampy except for the land lying west of Buck Creek, which rises abruptly out of the swamp to an elevation of about 40 feet, or 20 feet higher than the Buck Creek Swamp. The north-central section of this quadrangle is flat and poorly drained, with small swamps where water stands in wet weather. Large flat grassy savannahs lie along the Waccamaw River. These average two feet higher than the surrounding swamps and are cut by numerous small swamps which enter the savannahs from the south or west.

The drainage for this area follows a well developed pattern. A large portion of the drainage is accomplished by the Waccamaw River, which enters the quadrangle in the northeast corner, flows southwest and leaves by the southeast corner. Drainage for the west side of the quadrangle flows into Buck Creek, which in turn flows into Waccamaw River about two miles southeast of Longs Cross Roads.

The roads in this whole area are generally poor in wet weather, being composed of natural dirt and sand, except for State Route No. 9, which is a Class 1 type.

2. The field inspection is believed to be complete except for some small items erroneously omitted, which may be noted in the field edit and the classification of bridges, which will also be added at that time.

3. See report for Quadrangle T-8189.

4. The horizontal control for this quadrangle was established by the U. S. C. & G. Survey and by the State Local Control Survey, which established stations titled H. O. 410 to H. O. 424, inclusive, in 1935. All recovered stations which were necessary for control were pricked on the photographs and forwarded to the Baltimore Office in December, 1942.

5. Third order elevations were established on the H. O. line of traverse stations, which were established by a State local control survey in 1935. Two U. S. G. S. bench marks, 44DE and 45DE, were recovered. All bench marks necessary for vertical control were pricked on the photographs and forwarded to the Baltimore Office in December, 1942.

See paragraph two, side heading 5, of the Report for Quadrangle T-8189 for information concerning supplementary level lines.

7-13, inclusive, do not apply to this area.

14. Roads were classified according to instructions, a copy of which is attached to the Report for Quadrangle T-8199.

15. See Report for Quadrangle T-8199.

17. The North Carolina-South Carolina state line can be drawn on the map from the geographic positions of the state line monuments which have been plotted on the photographs during recovery operations. Political boundaries will be added during field edit.

18. Geographic Names for this quadrangle are the subject for special report by A. J. Wraight on Project CS-234.

19. Junctions with Quadrangle T-8195 on the north have been made and checked in the field.

Junctions with Quadrangle T-8201 on the east have been made and checked in the field.

Junctions with Quadrangle T-8206 on the south have been made and checked in the field.

Junctions with the Mixonville Quadrangle, U.S.G.S., were satisfactory with two exceptions:

(1) Near Lat. 38°55', Long. 78°045', the 40-foot contour was shown on the U.S.G.S. quadrangle in the wrong position. This was thoroughly checked in the field and the proper position for this contour is indicated on photograph 8216.

(2) Near Lat. 38°55', Long. 78°045', the 20-foot contour was shown on the U.S.G.S. quadrangle in the wrong position. This was thoroughly checked in the field and the proper position indicated on photograph 8216.

Elevations adjacent to the contours in question bear out the revised positions.

The contours along the junction of T-8202 and Mixonville quadrangle were transferred from the U.S.G.S. unedited advance sheet to the photographs used by this party before contouring was started. This afforded a better opportunity for comparison and revision where necessary.

Approved:

F. L. Gallen,
Chief of Party.

L. A. Chambers
Prin. Photogrammetric Aid.
26 CONTROL:

Eight Triangulation Stations shown within the limits of this map manuscript and five Triangulation Stations shown within one minute of the limits of this map manuscript, were used as control for secondary and detail points.

Triangulation Stations within the limits of this map manuscript are:

H.0. 410, 1942 (Civil Works Administration)
H.0. 412, 1942 (Civil Works Administration)
H.0. 415, 1942 (Civil Works Administration)
H.0. 419, 1942 (Civil Works Administration)
H.0. 423, 1942 (Civil Works Administration)
Olympic, 1942 (U. S. C. & G. S.)
State Line Mon., 1934 (U. S. C. & G. S.)
Conway, Pinewild, Loris Road Fork, Wampee Quad. (U.S.G.S.)

Triangulation Stations within one minute of the limits of this map manuscript are:

H.0. 61 (Civil Works Administration)
H.0. 307 (Civil Works Administration)
H.0. 402 (Civil Works Administration)
H.0. 426 (Civil Works Administration)
Leon, 1932 (U. S. C. & G. S.)

27 RADIAL PLOT:

The radial plot for this map manuscript will be described in Section 1 of the descriptive report for the radial plot of Projects CS-275 and CS-281, which will be submitted in the near future.

28 DETAILING:

Nine lens unmounted photographs were used for the compilation of this map manuscript.

A small area in the southwest section of this map manuscript, outlined on the discrepancy overlay, and a small area in the southeast section of this map manuscript, also outlined on the discrepancy overlay, were not field inspected. Drainage shown in these areas was interpreted from stereoscopic examination of the office photographs. Wooded area classifications were interpreted by comparison with other similar wooded areas which had been field inspected and classified.

The remaining area of the map manuscript was satisfactorily field inspected for office interpretation of the photographs.

All drainage, as field inspected, was verified on the office photographs by stereoscopic examination and some slight alterations were made.
DETAILING: (cont'd)

Additional drainage, revealed by stereoscopic examination of the office photographs, has been shown by a dot and dash symbol.

Where the field inspection party did not furnish this compilation office with the limits of swamp and marsh areas; these areas, have been shown with the usual symbol and have not been outlined with a dashed line.

SUPPLEMENTAL DATA:

There are no previous topographic surveys, by the U. S. Coast and Geodetic Survey, covering this area.

MEAN HIGH WATER LINE:

No navigable waters on this map manuscript.

LOW WATER AND SHOAL LINES:

No navigable waters on this map manuscript.

DETAILS OFFSHORE FROM THE MEAN HIGH WATER LINE:

There were no details offshore from the mean high water line.

WHARVES AND SHORELINE STRUCTURES:

There were no wharves or shoreline structures.

LANDMARKS AND AIDS TO NAVIGATION:

There were no landmarks or aids to navigation.

HYDROGRAPHIC CONTROL:

There was no hydrographic control.

DISCREPANCY OVERLAY:

A discrepancy overlay has been prepared to accompany this map manuscript. On it are shown two areas which have not been field inspected, and State and County Boundary lines. Appropriate notes which will aid the field edit party during the field edit, have been shown. A set of general notes are shown for interpretation of symbols and clarification of the map manuscript detail. The names or numbers of bench marks have been shown for future use of the Baltimore Compilation Office.

GEOGRAPHIC NAMES:

A white print of the general highway and transportation map, Horry County, S. C. and a white print of Columbus County, North Carolina, both used as Geographic Name lists have been submitted to the compilation office by the field inspection party.
38 GEOGRAPHIC NAMES: (cont'd)

A list of disputed, undisputed and recommended Geographic Names is attached to this descriptive report.

39 HORIZONTAL ACCURACY:

The horizontal accuracy of this map manuscript is believed to be within the limits set forth, for well-defined points and less well-defined points of detail in the instructions for Projects CS-264 and 285, Paragraph 59, dated July 15, 1942.

40 RECOMMENDATIONS FOR FUTURE SURVEYS:

The planimetric detail as presented on this map manuscript is believed to be complete, including all field inspection data and strict interpretation of the office photographs where field data was missing. This map manuscript is subject to a field edit for additions and corrections.

41 JUNCTIONS:

The following satisfactory junctions have been completed with this map manuscript.

To the North - T-8195
To the South - T-8206
To the East - T-8201

To the West - It is understood by this compilation office, that an acceptable survey has been made to the west of this map manuscript by another agency of the U.S. Government. This survey was not available to this compilation office for comparison of junction.

43 REMARKS:

The description as prepared by the field inspection party adequately describes the area covered by this map manuscript.
Respectfully submitted,
May 1, 1943

Between January, 1942 and July, 1944, this Bureau completed 323 quadrangles. These maps have been published, or are in the process of being published on scales of 1:31,680 or 1:25,000. This series of quadrangles includes a land area of approximately 15,000 square miles. Incident to this work, a considerable volume of survey records and data has accumulated which will be filed for future reference. This material is filed as follows:

Registered and Filed in the Vault

Cloth-mounted copy of the published quadrangle.
published quadrangle at 1:20,000 scale
Black and white cloth-mounted copy of the/map
-manuscript. This copy is filed to preserve
original survey detail shown on the manuscript
at 1:20,000 scale which may not have been shown
on the published sheet. For-political-boundaries,
woodland, marsh-and-swamp-limits, refer to the
published quadrangle for the finally adopted
positions outlines.

Descriptive Report.

Filed in the Photogrammetric Section—Surveys Branch

Field inspection photographs.

Contoured photographs (on which planetable contouring
work was performed.)

Field edit sheet.

Descriptions of recoverable topographic stations
(Form 524), filed in Reviewing-Unit Section.

Supplementary traverse and level records.

Field notes, computations, lists of positions, and
tabulations of results of horizontal and vertical
accuracy tests.

Reproduction proof.

Correction sheet (copy of quadrangle showing in
red changes to be made when next printed.)

Check lists of work performed on each sheet in the
Washington Office during review, drafting, edit, and
reproduction.

Original celluloid manuscript.
Copies of specifications and all instructions to field parties and field offices.

Filed in Reproduction Branch

Glass negatives of the color separation drawings.

Filed in the Library

Special report on field work by Commander K. T. Adams, 1944.

Special report on office work by B. G. Jones, 1944.

Season's report on field work by Commander F. L. Gallen, 1944.

Season's report on field work by Commander R. L. Schoppe, 1944.

Delivered to the Army Map Service in accordance with the contract

Film negatives and film positives of the color separation drawings.

All color separation drawings.

Original celluloid manuscript.

A correction sheet consisting of a copy of the first edition of the quadrangle with notes in red indicating changes desirable at the next printing.
DIVISION OF CHARTS
SURVEYS BRANCH

REVIEW OF AIR PHOTOGRAPHIC SURVEY T-8202

LONGS QUADRANGLE

This quadrangle manuscript has been examined for completeness, accuracy, and conformity with the specifications. It is adequate for smooth drafting, reproduction and publication. Revisions found to be necessary in this office are discussed on the next page.

Horizontal and Vertical Accuracy
The closest horizontal accuracy test is on T-8201.
The closest vertical accuracy test is on T-8195.

Previous Surveys
This manuscript has been compared with the following previous topographic surveys of this Bureau and other agencies. This map is satisfactory to supersede the previous surveys over the common area.

There are no previous topographic surveys in this area.

Comparison with Nautical Charts Nos.
The manuscript has not been applied to the charts at the date of this review. The following comments are pertinent to the compilation and correction of nautical charts:

There are no navigable waters on this map manuscript.
The following revisions of the map manuscript were found to be necessary and were accomplished as a part of this review:

Only changes of a minor nature were necessary during the review of this map manuscript.
