STATISTICS (III)

Land Area (Eq. Statue Miles): 55

Shoreline (More than 200 meters to opposite shore): None

Shoreline (Less than 200 meters to opposite shore): None

Number of Recoverable Topographic Stations established: 11
(10 bench marks and 1 azimuth reference monument)

Number of Temporary Hydrographic Stations located by radial plot: None

Leveling (to control contours) - miles:

Roman numerals indicate whether the item is to be entered by,

II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname

and initials (not initials only).

Remarks: This manuscript was received too late to be completed
as part of the War Mapping Project.
General Procedure in the Production of Topographic Quadrangles for the War Department

This quadrangle, together with similar adjoining maps produced under Project C.S.289-B, was prepared by the Coast and Geodetic Survey for the War Department under "General Specifications for War Department Mapping Program" issued about December 1941, in which is incorporated the "Standard of Accuracy for a National Map Production Program" issued by the Bureau of the Budget under date of June 10, 1941.

The general procedure in the production of this and the adjoining quadrangles was:

**FIELD SURVEYS**

Aerial photography with the Coast and Geodetic Survey nine-lens camera, with airplane and flight crew furnished by the U. S. Coast Guard. The photographs were taken to the scale of 1:20,000.

Ground inspection of the photographs for identification of control points, and classification and clarification of planimetric details on the photographs.

Contouring by planitable directly on the photographs. Supplementary vertical control was established by means of an extensive subordinate level net, furnishing unmarked elevations at road intersections, driveways, and numerous other points identifiable on the photographs.

**COMPILATION OF MANUSCRIPT**

Compilation on the map manuscripts by radial plot methods (celluloid band templets) of all planimetry and contours. These manuscripts were drawn on the scale of 1:20,000 on celluloid sheets on which polyconic projections had been ruled with the Polygon Ruling Machine in the Washington Office. Compilation was accomplished in the Baltimore & Tampa Photogrammetric Office.

**FIELD EDIT**

Comparison of a copy of the manuscript with the ground. This included inspection for completeness and accuracy as well as the location by planitable methods of additional details, checking of nautical and aeronautical aids to navigation, etc.
Accuracy Tests - Application of systematic horizontal and vertical accuracy tests to check the maps for conformity with the specifications. These tests consisted of comparison of the map position and elevation of selected random points with the true position and elevation as independently determined by standard survey methods.

PROCESSING IN THE WASHINGTON OFFICE

Review - Examination of the manuscript for accuracy and completeness of compilation and compliance with specifications, correcting where necessary; addition of military and state grids and other special features; and verification of the general adequacy of the manuscript as a basis for the production of a finished map.

Drafting and Reproduction - Preparation of smooth color separation drawings on 1:20,000 scale on metal-mounted "blueline" copies of the manuscript. From these drawings, negatives and printing plates were prepared for reproduction of the finished map on the scale of 1:31,680 or 1:25,000.
FIELD INSPECTION REPORT
QUADRANGLE T-8308
Project CS-269-B
F. L. Galen, Chief of Party

1. DESCRIPTION OF AREA:

The area covered by this quadrangle lies in Surry, Sussex and Southampton Counties, Va. It consists of swamp, farmland and higher rolling timberland. A large portion of the swampland is found along the southern and eastern extremities of the survey. Elevations range from about 35 feet in the southern and eastern portions to around 125 feet in the northwest corner. The growth in the swamps is mostly gum and cypress trees, with a heavy undergrowth of briars and brush. The higher timberland is largely pines with only a small amount of brush to be found. The farmland is found on the higher portions of land and is flat to rolling in terrain. Two small incorporated towns serve the people of the immediate vicinity. They are: Ivor which is found in the southeast corner and Wakesfield which is found in the northwest corner. The crops most raised in this vicinity are peanuts, cotton, corn and a few grain crops.

2. COMPLETENESS OF FIELD INSPECTION:

See report for T-8307.

3. INTERPRETATION OF THE PHOTOGRAPHS:

See report for T-8307.

4. HORIZONTAL CONTROL:

See report for T-8307.

5. VERTICAL CONTROL:

See report for T-8307.

6. CONTOURS AND DRAINAGE:

See report for T-8317.

7-13. The items under these headings in the field inspection report do not apply to this area.

14. ROAD CLASSIFICATION:

See report for T-8317.

15. BRIDGES AND CULVERTS:

See report for T-8317.
16. BUILDINGS AND STRUCTURES:

See report for T-8307.

17. BOUNDARY MONUMENTS AND LINES:

This quadrangle lies in Surry, Sussex and Southampton Counties, Va., and the boundaries are shown on the photographs covering the area. The boundaries for the town of Wakefield are shown on the photograph, while a map is submitted for the town line of Ivor. One boundary monument for the town of Ivor is pricked on topo photo No. 12977.

18. GEOGRAPHIC NAMES:

See report for T-8317.

19. JUNCTIONS:

Junctions with quadrangle T-8307 on the east, T-8291 on the south have been made and are in agreement. There are no recent contemporary surveys to the north. Junctions with the Soil Conservation Service surveys have been made in the field. Final junction is to be made by the compilation office.

20. PHOTOGRAPHS USED:

Photographs used in surveying this area were No's: 12976, 12977, 12978, 13018, 13019 and 13020. Single lens photos No. 107-129, 107-130, 107-131, 107-132, 107-133, 107-134, 107-135, 105-34 and 105-34.

Approved and forwarded by:

F. L. Gallen
Chief of Party

Henry M. Eldridge
Senior Photogrammetric Aid.
Contours and Field Inspection
as above
April 4th, May 1944
26 CONTROL:

The Field Party recovered and identified on the 1:20,000 field photographs the following horizontal control stations.

Those falling within the limits of the Map Manuscript are:

WAKEFIELD, 1941
IVOR, 1944
WAKEFIELD WATER TANK, MUNICIPAL, 1944
P.T.S. No. 13 (U.S.G.S.) 1918 — Position from USGS triangulation
BM "79", 1918 (U.S.G.S.)

Note: "79", 1918 (U.S.G.S.) could not be held during the running of the radial plot.

Those falling just outside the limits of the Map Manuscript are:

PTS 132, 1917 (U.S.G.S.)
PTS 182, 1917 (U.S.G.S.)
DREDDON, 1944
ZUNI WATER TANK, N. & W. R.R., 1944

The Field Party established field inspection stations at well defined points of detail near many of the above horizontal control stations.

All of the above horizontal control stations except "79", 1918 (U.S.G.S.) were used to establish photograph centers, secondary control points, and detail points.

27 RADIAL PLOT:

The Radial Plot for this Map Manuscript is part of the main Radial Plot No. 6 of Project C.S. 289, which will be described in Paragraph 27 of the descriptive report of Map Manuscript for Survey No. T-8291, which will be submitted to the Washington Office in the near future.

28 DETAILING:

The field inspection data furnished the Compilation Office for this Map Manuscript, were satisfactory. These
28 DETAILING: (Continued)

data were shown partly on nine lens 1:20,000 field photographs and partly on 9”x9” single lens photographs.

Sufficient nine lens office photographs covered the area to adequately detail this Lap Manuscript.

All detailing was accomplished in accordance with the field inspection data and careful office interpretation of the photographs.

Drainage wide enough to show both shores with clarity has been shown in black acid ink. All drainage too narrow to show both shores has been shown in blue acid ink, using the standard symbol for perennial and intermittent streams, as the case warranted.

Tree areas have been shown with a symbol in green acid ink and classified according to instructions received from the Washington Office.

Political boundaries have been detailed, as shown on the field photographs. A map of Ivor, Va. on tracing cloth, scale 1 inch equals 500 feet, was furnished by the Field Party to aid in the detailing of the boundary for this town. All boundary lines have been shown on the reverse side of the Lap Manuscript in blue acid ink.

29 SUPPLEMENTAL DATA:

There are no previous surveys, made by the U. S. Coast and Geodetic Survey, covering the area of this Lap Manuscript.

Iap of Ivor, Va. (tracing cloth) scale 1 inch equals 500 ft., was furnished the Compilation Office by the Field Party.

Photostat copies, scale 1:20,000, of a portion of a contemporary survey to the West of this Lap Manuscript, made by the Soil Conservation Service, were furnished the Compilation Office for junction purposes.
30 **MEAN HIGH-WATER LINE:**

Not applicable.

31 **LOW-WATER AND SHOAL LINES:**

Not applicable.

32 **DETAILS OFFSHORE FROM THE HIGH-WATER LINE:**

Not applicable.

33 **TERRACE AND SUCCESSION LINES:**

Not applicable.

34 **LANDMARKS AND AIDS TO NAVIGATION:**

Not applicable.

35 **HYDROGRAPHIC CONTROL:**

Not applicable.

36 **LANDING AREAS AND AERONAUTICAL AIDS:**

There are no landing fields or recommended aeronautical aids within the limits of this Map Manuscript.

37 **DISCREPANCY OVERLAY:**

A discrepancy overlay has been prepared to accompany this Map Manuscript. On it are notes which are deemed likely to be of assistance during any future field edit. A set of general notes is included to aid in the interpretation of the symbols shown on the Map Manuscript.

38 **GEOGRAPHIC NAMES:**

The results of a geographic names investigation were furnished the Compilation Office on a copy of the U. S. Geological Survey Ivor, Va. 15 minute quadrangle. Only
the undisputed names have been shown on the l'ap Manuscript. A list of undisputed, disputed and recommended names is attached to this descriptive report.

39 **HORIZONTAL ACCURACY:**

The horizontal accuracy of this l'ap Manuscript is believed to be within the limits set forth for well defined and less well defined points of detail for War Mapping Projects.

40 **RECOMMENDATIONS FOR FUTURE SURVEYS:**

The planimetry, as presented on this l'ap Manuscript is believed to be complete, except as noted herein.

41 **REMARKS:**

The description, as furnished in the field report, adequately describes the area of this l'ap Manuscript.

42 **JUNCTIONS:**

A satisfactory junction has been made with the following:

To the East with l'ap Manuscript for Survey No. T-8307
To the South with l'ap Manuscript for Survey No. T-8291
To the North no contemporary survey is available to the Compilation Office for junction purposes.

To the West the Compilation Office has been furnished, for junction purposes, photostat copies, scale 1:20,000, of parts of a contemporary survey made by the Soil Conservation Service.

Junction could not be completed between these photostat copies and the l'ap Manuscript at the following:
JUNCTIONS: (Continued)

Drainage shown on photostat at Lat. 36° 52' 33"
not visible on the photographs,
Road shown on Map Manuscript at Lat. 36° 53' 58"
not shown on photostat,
Road shown on Map Manuscript at Lat. 36° 54' 47"
not shown on photostat,
Road shown on Map Manuscript at Lat. 36° 55' 24"
not shown on photostat,
Road shown on Map Manuscript at Lat. 36° 55' 11"

Road shown on Map Manuscript at Lat. 36° 56' 02"
not shown on photostat,
Road shown on Map Manuscript at Lat. 36° 56' 09"
not shown on photostat,
Stream shown on the Map Manuscript at Lat. 36° 56' 39"
is not shown on the photostat,
Stream shown on the Map Manuscript at Lat. 36° 56' 53"
is not shown on the photostat,
Stream shown on the Map Manuscript at Lat. 36° 57' 10"
is not shown on the photostat,
Stream shown on the Map Manuscript at Lat. 36° 56' 07"
does not agree with photostat location,
Stream shown on the Map Manuscript at Lat. 36° 57' 09"
is not shown on the photostat,
Stream shown on the Map Manuscript at Lat. 36° 57' 21"
does not agree with photostat location,
Stream shown on the Map Manuscript at Lat. 36° 57' 31"
does not agree with photostat location,
Railroad at Lat. 36° 58' 28" is not in agreement,
Road at Lat. 36° 58' 33" is not in agreement,
Road at Lat. 36° 53' 45" is not in agreement,
Stream at Lat. 36° 58' 42" is not in agreement,
Stream shown on Map Manuscript at Lat. 36° 58' 46"
is not shown on photostat,
Stream at Lat. 36° 59' 02" is not in agreement,
Stream shown on Map Manuscript at Lat. 36° 59' 14"
not shown on photostat,
Stream shown on Map Manuscript at Lat. 36° 59' 16"
not shown on photostat,
Road shown on Map Manuscript at Lat. 36° 59' 22"
not shown on photostat,

Adjustments have been made in so far as possible in order to bring these junctions into closer agreement. Those
discrepancies which have been crossed out in red have been corrected.
42 JUNCTIONS: (Continued)

Stream shown on Map Manuscript at Lat. $36^\circ59'23"$ not shown on photostat,
Road shown on Map Manuscript at Lat. $36^\circ59'30"$ not shown on photostat,
Road at Lat. $36^\circ59'38"$ is not in agreement,
Stream shown on Map Manuscript at Lat. $36^\circ59'46"$ not shown on photostat,
Stream shown on photostat at Lat. $36^\circ59'54"$ is not visible on the photographs.

Contours are not in good agreement. However, it is believed that adjustments could be made with little shift in the contours of either the Map Manuscript or the Soil Conservation Service Survey.

43 RECOVERABLE TOPOGRAPHIC STATIONS:

Form 524 is being submitted for each of ten bench marks and one azimuth reference monument which were established on this Map Manuscript by radial intersections of field identified locations.

44 COMPARISON WITH EXISTING TOPOGRAPHIC SURVEYS:

Due to scale difference only a visual comparison could conveniently be made with the U. S. Geological Survey Ivor, Va. 15 minute quadrangle. Common planimetric features seem to be in good agreement.

45 COMPARISON WITH NAUTICAL CHARTS:

There are no nautical charts covering the area of this Map Manuscript.

FIELD EDIT REPORT
TO ACCOMPANY
QUADRANGLE T-8308
PROJECT OS-209-B (South)
F. L. Gallen
Chief of Party

5. The designation and elevation of each bench mark appearing on the
map manuscript have been checked and verified. Two bench marks
Y 231 and U.S.G.S. 26, 1913, that did not appear on the map manuscript
have been added by the field edit party.

14. Unclassified roads appearing on the map manuscript, were classified
in accordance with instructions for road classifications. Because
of their present condition many class 5 roads were deleted.

15. All bridges were classified in accordance with instructions for bridge
classifications.

16. All buildings added by the field edit party were classified.

17. The boundary line between Southampton and Surry Counties has been placed
on the ozalid print from information obtained from County Highway maps
published at a scale of 1 mile to the inch and from information obtained
on the ground. The highway map mentioned above shows the boundary line
along the northwest side of Southampton County as a straight line and it
has been shown as such on the ozalid print. Boundary monuments on this line have
been recovered and marked on photographs. The line as shown on the manuscript was
located by connecting the monumented positions by straight lines during review.
The boundary line between Southampton and Sussex Counties has been re
inked on the ozalid print. This should be a straight line but it was
shown on the map manuscript as a curved line. The line located by monumented
positions on manuscript.

The re-inked county line as shown on the ozalid print running southwest
from the tri-county corner does not join by about two hundred feet with
the boundary line shown on the Hanry, Virginia, quadrangle, published at
a scale of 2 inches to the mile, which lies to the west of this quadrangle.
The boundary line shown on T-8308 if prolonged would make a junction with
the county boundary line shown on the Hanry quadrangle at the point where
the boundary line crosses County Highway 626. There is a bend in the
boundary line at this point.

46. The field edit was accomplished by visual inspection in the field. All
notes were made on an ozalid print of the map manuscript and were transferred
to a duplicate ozalid print. The various field edit notes have been inked
on the ozalid print using the following color scheme:

Deletions ......................... Green
Additions, classifications, names
and notes .......................... Black
Political sub-divisions .............. Violet
Notes on the discrepancy overlay have been checked off
in red ink.
47. The detail as compiled on this sheet was complete and adequate with few additions or deletions necessary.

48. Two tests were made to determine the accuracy of contours in this quadrangle. Both tests were made on the outer portions of single lens photographs that were used for contouring: In addition to accurately locating the 20' interval contours, the adjacent 5' contours were accurately located: this type of test would place all contours within the five foot limits of the area tested.

Contours were located by taking planimetric shots on the contour approximately 100 meters apart. The final check was inked in red on the photograph.

A test was run by Henry M. Eldridge on single lens photograph No. 107-129 to check the work of Sam C. Dionisiio and another test was run by Sam C. Dionisiio on single lens photograph No. 102-133 to check the work of William F. Deescher. Both tests show that the areas tested were well within the limits of 5' intervals and very little shift would place them in their true geographic position.

It is recommended that the contours in this quadrangle be accepted as complying with the national standard map accuracy requirements.

The Horizontal accuracy test in this quadrangle will be scaled by the Washington Office.

49. No survey was made to the north of this quadrangle. Junctions with T-8307, on the east, and T-8291 on the west will be made later by the field edit party when they are received. Junctions with the Manzy, Virginia, quadrangle published at a scale of 1:31,680 has been checked and is satisfactory, except for minor shifts, see paragraph No. 17 for discrepancy in the county boundary junctions.

This test consists of a traverse between triangulation stations BERLIN, 1944 and IVOR, 1944. The traverse is 8.4 statute miles long and the closing error is 2.88 meter or 1 part in 4800. The closing error was adjusted through the traverse. 19 test points were computed. In the tabulation the geodetic position from the traverse computations is referred to as T. No. and the scaled position from the map manuscript is referred to as M. No. The "direction of displacement" refers to the direction of the scaled position from the geodetic position.

Test points No. 1 to 6 are in quadrangle T-8291, and points No. 5 to 19 are in quadrangle T-8308.

Notes: The handwritten note on the image reads: "Names endorsed and approved by L. V. e.K. on 1/24/45."
Between January, 1942 and July, 1944, this Bureau completed 323 quadrangles. These maps have been published, or are in the process of being published on scales of 1:31,680 or 1:25,000. This series of quadrangles includes a land area of approximately 15,000 square miles. Incident to this work, a considerable volume of survey records and data has accumulated which will be filed for future reference. This material is filed as follows:

Registered and Filed in the Vault

Cloth-mounted copy of the published quadrangle.

published quadrangle at 1:20,000 scale

Black and white cloth-mounted copy of the map

manuscript. This copy is filed to preserve

original survey detail shown on the manuscript

at 1:20,000 scale which may not have been shown

on the published sheet. For political boundaries,

woodland, marsh, and swamp limits, refer to the

published quadrangle for the finally adopted

positions, outlines.

Descriptive Report.

Filed in the Photogrammetric Section—Surveys Branch

Field inspection photographs.

Contoured photographs (on which planitable contouring work was performed.)

Field edit sheet.

Descriptions of recoverable topographic stations

(Form 524), filed in Reviewing-Unit Section.

Supplementary traverse and level records.

Field notes, computations, lists of positions, and tabulations of results of horizontal and vertical accuracy tests.

Reproduction proof.

Correction sheet (copy of quadrangle showing in red changes to be made when next printed.)

Check lists of work performed on each sheet in the Washington Office during review, drafting, edit, and reproduction.

Original celluloid manuscript.
Copies of specifications and all instructions to field parties and field offices.

Filed in Reproduction Branch

Glass negatives of the color separation drawings.

Filed in the Library

Special report on field work by Commander K. T. Adam, 1944.

Special report on office work by B. G. Jones, 1944.

Season's report on field work by Commander F. L. Gallen, 1944.

Season's report on field work by Commander R. L. Schoppe, 1944.

Delivered to the Army Map Service in accordance with the contract

Film negatives and film positives of the color separation drawings.

All color separation drawings.

Original celluloid manuscript.

A correction sheet consisting of a copy of the first edition of the quadrangle with notes in red indicating changes desirable at the next printing.

SURVEYS BRANCH

REVIEW OF AIR PHOTOGRAPHIC SURVEY T-8308

IVOR QUADRANGLE

This quadrangle manuscript has been examined for completeness, accuracy, and conformity with the specifications. It is adequate for smooth drafting, reproduction and publication. Revisions found to be necessary in this office are discussed on the next page.

**Horizontal and Vertical Accuracy**

A horizontal accuracy test was run in this quadrangle and found to be satisfactory. The report of the test is enclosed in this Descriptive Report.

Two vertical accuracy tests were run in this quadrangle and found to be satisfactory. See Item 48 in the Field Edit Report enclosed in this Descriptive Report.

This manuscript has been compared with the following previous topographic surveys of this Bureau and other agencies. This map is satisfactory to supersede the previous surveys over the common area.

There are no previous topographic surveys in this area.

**Comparison with Nautical Charts Nos.**

The manuscript has not been applied to the charts at the date of this review. The following comments are pertinent to the compilation and correction of nautical charts:

There are no nautical charts covering this area.
The following revisions of the map manuscript were found to be necessary and were accomplished as a part of this review:

Only changes of a minor nature were necessary during the review of this map manuscript.

Reviewed under direction of D. H. Benson

Inspected by B. G. Jones

Examined and approved:

K.T. Adams
