COMPARISON WITH PREVIOUS SURVEYS; TOPO., HYDRO., AND CHARTS:
Due to scale differences only a visual comparison could be made with the Portland, Oregon - Washington, U.S.G.S. 15 minute quadrangle, scale 1:62500. Except for new construction, since the quadrangle was made, such as Vanport Housing Project, Portland Meadows Race Track and new streets and roads the quadrangle and map manuscripts are in good agreement. (See reverse side)

REMARKS
All corrections and additions which were found during field edit were applied to the map manuscripts. A final compilation office review was then made.

FORWARDED TO...Washington Office...DATE...October 22, 1946

R. A. Earle
Chief of Party
Comparison was made with nautical charts No. 6154, Scale: 1:40,000 and No. 6155, Scale: 1:20,000 by use of the vertical projector. There have been many changes made in the area north of the Columbia Slough, between Longitude 122° 30' and Longitude 122° 42' since the charts were made. Switzer Lake and two ponds to the north of this lake have been filled. Two mud sloughs have been partially filled and shortened due to construction of Denver Ave. (U.S. Hwy. 99W) and the Vanport Housing Project. "Portland Meadows" a new race track has been built in this area.

and quadrangle are in good agreement.

Comparison was made with nautical charts No. 6154, Scale: 1:40,000, No. 6155, Scale: 1:20,000 and No. 6156, Scale: 1:40,000 by use of the vertical projector. The following differences were noted:

1- Switzler Lake and two ponds north of Switzler Lake have been filled.
2- The Columbia Slough has been divided by a dike and construction of a pump house at Latitude 45° 34' 58" and Longitude 122° 38' 56"
3- At Latitude 45° 34' 05" and Longitude 122° 37' 58", a new road has divided a branch of the Columbia Slough. Approximately 200 meters north of this point a bridge has been built across the Columbia Slough.
4- New roads, a golf course, the Army Air Base and the Portland Airport have been constructed since the charts were made.

1 to 25: All the information that is applicable to these side headings is given in the "Field Inspection Report, Project CS-322, Area of the Second Radial Plot", which was enclosed with the Descriptive Report for Quadrangles T-8674 and T-8675. This Descriptive Report has been submitted. Side heading numbered 12, discussed in the above mentioned field inspection report, is not applicable to Quadrangles T-8680 and T-8681.

Approved by:  

R. A. Earle  
Chief of Party

Respectfully submitted:  

Charles Hansovich  
Topo. Engineer
Amendment to File Data

Since project CS-322 was reviewed and registered, it was decided that a Completion Report for each project would be written and filed in the Bureau of Archives. This Completion Report should include all special reports, correspondence of probable future interest or importance, a project layout, a photo index, and a copy of the initial and supplementary project instructions.

A special file has been set up in the library for Division of Photogrammetry projects. The Completion Report and other special reports will be filed under the project number, and these will be arranged in numerical order.

The following reports and records for project CS-322 are now filed in the Bureau Archives, rather than according to the red notes in the Descriptive Reports:

A. Special Reports:

1. Investigation of Boundary Monuments and Land Lines for Radial Plots 1, 2, 3, and 4
2. Radial Plots 1, 2, 3, and 4
3. Legal descriptions of boundaries
4. Field Inspection for plots 1, 2, 3, and 4

Access No. CS-322 Rept. 1  " " 2  " " 3  " " 4

B. Computations: Triangulation and Traverse

943/GTZ G-6785

C. Field records:

1. Horizontal Angles (form 250) 12 vol. 943/GH G-7082
2. Traverse Measurements (form 590)
   9 vol.
3. Descriptions (form 525) and recoveries
   (form 526)
4. Pricking cards (form M-982-1) for
   Ele. and Trav.
5. Recoverable Topographic stations

Access No. 943/GA G-6786 Div. of Photogrammetry
General File

D. Recovery of bench marks (form 685)

Filed in Leveling Sec.

E. Supplemental data: maps, plans

These were transferred to the Map Section (Mr. Stanley, Chief), Division of Charts, to be selectively filed or discarded.

January 1951
26. **Control:**

At the time this project was started there were fifteen existing horizontal control stations in the area of these two map manuscripts. Eight were recovered and six of these were identified for use in the radial plot.

In order to more satisfactorily control the orientation of the photographs, two new triangulation stations were established. One of these was located in the west central part of T-3681 and the other was located in the central part of T-3680. They were prominent brick stacks on public schools and could be easily identified on the photographs.

A complete tabulation of the horizontal control stations which were originally in the area of these two map manuscripts is attached to the "Field Inspection Report, Project CS-322, Area of the Second Radial Plot". This report is included with the descriptive report for map manuscripts No's. T-3674 and T-3675, which has been submitted.

A complete tabulation of supplemental horizontal control stations which were established in 1945 and 1946 is attached to a special report, "Third-Order Triangulation and Traverse, Project CS-322, Area of the Second Radial Plot", which has been submitted. Triangulation Station NEW 2 (U.S.B.), 1941 was plotted from Oregon North Zone, coordinates furnished by the U.S. Engineers office at Portland, Ore. They are:

\[
\begin{align*}
X &= 1,460,591.73 \\
Y &= 711,738.98
\end{align*}
\]

27. **Radial Plot:**

The facts concerning the radial plot for the area of these two map manuscripts have been fully covered in the "Descriptive Report, Second Radial Plot, Project CS-322". This radial plot report was included with the descriptive report for map manuscripts No's. T-3674 and T-3675.

28. **Detailing:**

Compilation was done in accordance with instruction for Project CS-322 and special instructions applicable to planimetric mapping.
In the areas of the Columbia Slough and Peninsula Drainage Canal there were no night photographs taken in November 1945. This office was fortunate in obtaining a flight of 1:10000 scale contact prints from the U.S. Army Engineer Office at Portland, Ore., taken on May 20, 1944, when the water level in the river was 6.6 feet above Mean Low Water. These were used to delineate the high-water line of 5.0 feet above Mean Low-Water in the area of these sloughs. In the extreme southwest area of T-8680 is a small portion of the Willamette River. U.S. Engineer 1:8000 ratio prints, taken on September 29, 1944 when the water level was 1.7 feet above Mean Low-Water, were used to delineate the high-water line in this area. In all inland areas the original photography was adequate. The 1:5000 scale single lens contact prints, taken along the shorelines of the Willamette and Columbia Rivers, were a great help in interpreting detail, in these areas.

In some cases it was difficult to interpret, from the ratio print, the correct shape and size of buildings. This was attributed to the loss of sharpness when the contact prints were enlarged.

When any item relative to the field inspection data was doubtful, it could be clarified by consultation with the field man who had done the inspection work. It was, therefore, unnecessary to make discrepancy overlays for the field edit work.

The classification symbols for tree or brush areas are placed on the inside of the curved line which denotes the limits of said areas. These curved lines and the letter symbols are in green acid ink.

All boundary and land claim lines are shown by appropriate symbols in red acid ink. A legend shown in the margin of each map manuscript identifies these lines.

Pertinent notes, relative to various items, have been lettered in the margins of the map manuscripts.

29. **Supplemental Data:**

The following maps or plans, which will be forwarded with the map manuscripts, were used to supplement the photographs:

- East Vanport, Oregon  
  Scale: 1" = 300'  
Portland Airport (The Port of Portland), Scale: 1" = 300'  
Portland Air Base (Layout), Scale: 1" = 400'  
Portland Army Air Base Building List. (Cahier)

- Portland Meadows (Race Track), paper tracing, Scale: 1" = 200'

The following maps and plans, which were also used, will be forwarded when map manuscripts adjacent to T-8680 and T-8681 are corrected after field edit:

- Map of City of Portland Scale: 1" = 1500' approx.
- Vanport City Layout Plan, Scale: Unknown
  Sheets 22, 23, 25, and 26 of a set of 74 sheets published by the Multnomah County Assessor's Office Scale: 1" = 600'
34. One landmark: (to be retained on charts: 61540, 61535, 115348
Portland Union Pacific R.R. Co., elevated, Black Sands 1852(c)
S.P. p. 369.
From 617 submitted
written note, reference to same page, referring above.

The following mean of flight, where after being secured, if the plane is located:

1. The following mean of flight, where after being secured, if the plane is located:
30. **Mean High-Water Line:**

The mean high-water line was detailed from information submitted by the field parties and from stereoscopic examination of the photographs. Most of the shoreline data is shown on U.S. Engineer photographs taken on May 20, 1944 and Sept. 26, 1944. See paragraph 28, "Detailing," for complete photographic data. The mean high-water line is shown by a continuous heavy-weight black acid ink line at a plane five feet above the U.S. Engineers low-water datum which is 1.29 feet above mean sea level.

There are no marsh areas immediately bordering the high-water line.

31. **Low-Water and Shoal Lines:**

The field inspection unit indicated a definite low-water line along the east shore of the Willamette River. This low-water line has been shown by a light-weight dash and dot black acid ink line. Indefinite areas which are low-water have been shown enclosed in a dotted black acid ink line and appropriately noted. The field inspection unit did not indicate any shoal areas within the limits of these two map manuscripts.

32. **Details Offshore from the Mean High-Water Line:**

A mud and brush island in the Peninsula Drainage Canal is the only offshore detail within the limits of these two map manuscripts.

33. **Wharves and Shoreline Structures:**

Piers, wharves, dolphins, etc., have been shown.

34. **Landmarks and Aids to Navigation:**

There are no landmarks or fixed aids to navigation within the limits of these two map manuscripts.

35. **Hydrographic Control:**

There were no hydrographic stations needed within the area of these two map manuscripts.

36. **Landing Fields and Aeronautical Aids:**

Most of the area of "Portland Airport" falls in the northeast part of Map Manuscript No. T-6661.

Forms 567 are attached recommending the retention as an aeronautical aid of the beacon at the Portland Airport. It is also triangulation station PORTLAND, COLUMBIA AIRPORT BEACON, 1943.

37. **Geographic Names:**

Only undisputed geographic names are shown on the map manuscripts.
Geographic Names are the subject of the special report, "Investigation of Geographic Names, Project GS-322, Area of the Second Radial Plot", which is being submitted.

38. **Recoverable Topographic Stations:**

Copies of Forms 524 are being submitted for the following:

**In the area of Map Manuscript No. T-8680**

- **TANK, (Elevated) Portland Traction Co., 1946**
- **GURODA, (Holy Redeemer School), 1946**
- **GRAY TANK, (Elevated) Nicolai Door Mfg. Co., 1946**
- **Portland Boundary Monument, 1946 (north boundary)**
- **Portland Boundary Monument, 1946 (**)**
- **Portland Boundary Monument, 1946 (**)**
- **Portland Boundary Marker, 1946 (**)**
- **T IN R 1E, Section Corner 14, 15, 22, 23, 1946**
- **T IN R 1E, Section Corner 15, 16, 21, 22, 1946**
- **Northeast Corner J. Rankin, Donation Land Claim, 1946**
- **Southwest Corner Wm. McClung, Donation Land Claim, 1946**
- **Southwest Corner Lewis Love, Donation Land Claim, 1946**

**In the area of Map Manuscript No. T-8681**

- **VERNON STANDPIPE, 1946**
- **T IN R 1E, Center of Section 12, 1946**
- **T IN R 2E, Center of Section 19, 1946**
- **T IN R 1E, Section Corner 13, 14, 23, 24, 1946**
- **Southeast Corner Wm. Hall, Donation Land Claim, 1946**
- **Southeast Corner Wm. McClung, Donation Land Claim, 1946**
- **Northwest Corner A. Whittaker, Donation Land Claim, 1946**
- **Southeast Corner of Government Lot No. 6, 1946**

39. **Junctions:**

Complete and satisfactory junctions have been made between Map Manuscripts Nos. T-8680 and T-8681, and with adjoining map manuscripts.

40. **Bench Marks:**

Bench marks have been detailed as identified by the field inspection units. Each bench mark is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 ft. lettered nearby.

41. **Donation Land Claims and Section Lines:**

Donation Land Claims and section lines were located on ozalid prints of the map manuscripts after the initial compilation had been completed. These lines, with pertinent explanatory notes, were placed on the prints in red and purple ink respectively, by the field party, and were then traced on the map manuscripts by the compilers. The ozalid prints containing these lines are being forwarded.
44. **Comparison with Existing Topographic Surveys:**

See record sheet which accompanies each map manuscript.

45. **Comparison with Nautical Charts:**

See record sheet which accompanies each map manuscript.

October 17, 1946  
J. Edward Deal, Jr.  
Photogrammetric Engr.
46. Methods

These map manuscripts were field edited in accordance with the Field Edit Instructions dated 24 August, 1945. All corrections and additions have been made accurately on the field edit prints in colored ink, or the place where a correction or addition is to be made has been indicated by a note which refers to a field photograph. All features which are to be deleted have been crossed out in colored ink.

New buildings were located either by pacing or taping and are shown on the field edit prints. A legend on each of these prints will furnish a key to all the symbols and to the different colored inks used.

47. Adequacy of the Compilation:

The panimetry as delineated on the map manuscripts may be considered as complete and adequate with respect to the corresponding ground detail. Except for the deletions, corrections, additions, and notations made on the field edit prints, it is accurate, also, in regard to relative position.

Any drafting of detail that seemed to be questionable was called to the attention of the Compilation Office by notes. Several large buildings and roads, which were recently constructed, were located by planetary methods on field photographs. The additional names and numbers of roads which were indicated on the prints were obtained and checked against the official road signs.

The Federal Housing Authority development of "East Vanport" is being torn down. Although some buildings are still intact it was definitely ascertained by the field edit party from the Federal Housing Authority that all buildings would be removed in the housing development of "East Vanport". The roads in the area have not been disturbed. Their final disposition could not be definitely determined from the officials at the time of the field edit; however, the orders and plans are subject to change.

The latest information on the disposition of the Portland Army Air Base is that it definitely will be utilized by the U.S. Army Air Corps Reserve and possibly by the Oregon National Guard. The Oregon National Guard is endeavoring to obtain the buildings that will not be used by the Air Corps Reserve.
It was reported by the field editor at the time of the field edit of T-8682 that some of the buildings would be torn down. In the latest conference with the Commanding Officer of the Air Base, it is probable that all buildings will remain intact.

In T-8680 a large race track "Portland Meadows" has been constructed recently; the original plan of this race track was obtained and by the use of the projector, the Compilation Office delineated the new detail by holding to most of the planimetry common to the plan and the map manuscript. This new and additional detail was verified in the field by the field edit party. A paper tracing of the original plan will be submitted.

In accordance with the field edit instructions, the accuracy and the completeness of the map manuscripts in regard to geographic names, boundaries, public land lines, and detail were checked by Mr. H. G. Richardson, City Surveyor, Portland. The geographic names in this area have been reviewed by Mr. Lewis A. McArthur, Collaborator for the U. S. Coast and Geodetic Survey.

48. **Accuracy Tests:**

Results of the horizontal accuracy test on T-3680 and T-3681 are attached to the back of this report.

These maps are believed to comply with the standard map accuracy requirements.

49. **Bench Mark Elevations:**

The elevations of the bench marks shown on the sheets have been checked.

50. **Donation Land Claims and Section Lines:**

Donation Land Claims and section lines were located on additional ozalid prints of the map manuscripts after the initial compilation had been completed by a special field party. These lines were indicated in red and purple ink, respectively and supplemented, if necessary, by explanatory notes. These additional ozalid prints will be submitted with the field edit sheets.

51. **Geographic Names:**

Refer to the addendum in the "Special Report on Geographic Names, Project CS-322, Area of the Second Radial Plot", for information on the following geographic names:

KENTON, WALNUT PARK, OVERLOOK and PORTLAND ELECTRIC POWER COMPANY.

HORIZONTAL ACCURACY TEST  
Map Manuscript T-8681 & T-8680  
Project CS-322

Plane Coordinate positions, which were established from the various traverses  
run by the City of Portland, on the Lambert Projection, Oregon State, North  
Zone, were obtained from the City Surveyor of Portland, Mr. H. C. Richardson,  
who stated that these coordinate positions were of fourth-order accuracy or  
better and that no position is in error more than three feet.

Since the majority of these coordinate positions were for section, quarter  
section or city boundary corners, which were located at the centerline inter-  
sections of streets or roads, it was decided to utilize most of them as test  
points to check the accuracy of the map manuscripts.

The location of each of these points was indicated by the City Surveyor on sev-  
eral County Assessors Maps, which will be forwarded to Washington. Each posi- 
tion used as a test point has been assigned a numerical number (test point num- 
ber) and is indicated in red on the County Assessor’s Map or sheet attached thereto.

In the tabulation of the test points, the coordinate positions are referred to as T.P.No. and the scaled positions from the map manuscript (Scale 1:8000) are referred to as M.M.No.

U.S. COAST AND GEOGRAPHIC SURVEY

DEPARTMENT OF COMMERCE
Division of Photogrammetry

Review Report of

Planimetric Survey, Manuscript No. T-8681

Paragraphs not used in this review have been adequately covered in other parts of this report.

28. Detailing.-

The map details were complete with the exception of a few minor additions or deletions which had been overlooked in the application of the field data to the map manuscript. A correction and addition was made to the delineation of brush land in the U. S. Army Ordinance Area. The alignment of N.E. Lombard Pl. was changed where it joins N.E. Columbia Blvd. in order to agree with the section line.

32. Donation Land Claims.-

The south boundary of the Anthony Whittaker D.L.C. was adjusted slightly to tie with the boundary on the adjacent sheet. West, north and east boundaries of William H. Payne D.L.C. was adjusted to agree with General Land Office Plat.

39. Section Lines.-

The section line now tying into N.E. Lombard Pl. had been incorrectly located so as to run about 2-1/2 millimeters south of the centerline of N.E. Lombard Pl. This was discovered in checking the junction with T-8690 and was corrected during review.

44. Comparison with Existing Topographic Surveys.-

T-8681 supersedes those sections of the following older Coast and Geodetic Survey sheets over the common area:

<table>
<thead>
<tr>
<th>Sheet</th>
<th>Scale</th>
<th>Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>T-2007</td>
<td>1:10,000</td>
<td>1890</td>
</tr>
<tr>
<td>T-2521</td>
<td>1:10,000</td>
<td>1900</td>
</tr>
</tbody>
</table>

T-8681 also has been compared with the following published quadrangles and supersedes the planimetry on those quadrangles over the common area:

Portland, Ore.-Wash., U.S.E., 1:62,500, 1939-40

Technical Assistant to the Chief, Div. of Photogrammetry

K. T. Adams Chief, Div. of Photogrammetry

Chief, Nautical Chart/Branch Division of Charts

E. N. Green Chief, Div. of Coastal Surveys
Paragraphs not used in this report have been adequately covered in other parts of this descriptive report.

26. **Control.**

One newly established triangulation station, "Kenton School Stack, 1946" and five older stations have been added to this map manuscript during review.

44. **Donation Land Claims and Section Lines.**

The Donation Land Claims and Section Lines were compared with these data: General Land Office plats, assessment maps, and the aerial photographs. The following corrections were made to the land lines:

1. South line of Alexander Brown D.L.C. added to this map manuscript.

2. J. Rankin D.L.C. adjusted to agree more favorably with the data.

3. J. R. Switzer, Lewis Love, and Wm. McClung tracks adjusted to agree with the data.

4. The section lines between the corners, 3-4-9-10 and 1-2-11-12, have been adjusted to junction with T-8679 and T-8681.

5. The section line between the corners, 9-10-15-16 and 3-4-9-10, has been adjusted to junction with T-8674.

44. **Comparison with Existing Topographic Surveys.**

This map manuscript has been compared with the following topographic surveys which it supersedes in common detail of common area:

- U.S.G.S. Quadrangle Portland, Oreg. 1:62,500
- U.S.G.S. & C.S. T-2007 1890

This map manuscript has not been applied to the nautical charts as of the date of this report.

From: Lt. Comdr. R. A. Earle

Subject: Donation Land Claims on T-8680

18 March 1947

The following information requested in the above reference is respectfully submitted:

1. David Allery - south of Lewis Love tract in sections 14 and 15.

This is not an original Donation Land Claim but is a legal subdivision known as Land Warrant No. 170. It is referred to as Government Lots No's. 1, 2 & 3 of Section 15 and Government Lot No. 5 of Section 14.

2. J. S. Gerow - north of Jas. Thompson tract in the NE\(^4\) Section 22.

There is a J. T. Gerow listed for the NW quarter of Section 22 and a J. T. Gerow listed for the northeast quarter of Section 22, however, these are not Donation Land Claims. The northwest quarter of Section 22 was acquired by a land warrant and the northeast quarter by certificate.

3. McKeown (name not complete) - west of the Jas. Thompson tract - in S\(^\frac{1}{2}\) Section 23.

There is a Wm. McKewon east of the Jas. Thompson tract in the southwest quarter of Section 23, however, the parcel of land was not a surveyed Donation Land Claim but was acquired by certificate.
The above information was obtained from the original land office plats and other data, on file in the office of Mr. Claude Powers, Surveyor of Multnomah County. Mr. Powers knows of no deed in Multnomah County which refers to the above parcels of land and states that they are known as legal government lots and not donation land claims.

Subject: Donation Land Claims on T-8680

Enclosed is an ozalid print of T-8680 upon which you will please note the following Donation Land Claims which are indicated on plats of the General Land Office but which were not shown on this map manuscript:

1. David Allery - south of Lewis Love tract - in sections 14 and 15.

3. McKeown (name not complete) - west of the Jas. Thompson tract - in S½ section 23.

If for any reason any or all of these tracts should not be shown, you will please inform me accordingly.
