RECORD SHEET

GENERAL LOCALITY Columbia River, Ore.-Wash.
LOCALITY Government Island, Ore.
     Sept. 26, 1945
     Aug. 1945
     Oct. 1, 1945
     Nov. 1945
PHOTOS ORDERED REC'D. Jan. 21, 1946
PHOTO PREPARATION:
CONTROL I. L. Harris
AZIMUTHS Letson & Salazar
PASS POINTS J. L. Harris
TEMPELTS Myers VERIFIED Harris
RADIAL PLOT:
PLOTTED BY I. L. Harris DATE 11-2-45
VERIFIED J. E. Deal DATE 11-6-45

COMPARISON WITH PREVIOUS SURVEYS: TOPO., HYDRO., AND CHARTS:
Due to the scale difference only a visual comparison could be made with the USGS CAMAS Quadrangle. Common planimetric detail is in fair agreement however the Washington-Oregon State Line boundary, as shown on the quadrangle, is in error. The boundary line as shown on the map manuscript was verified by various engineers from Multnomah County...

(Continued on Reverse Side)
REMARKS All corrections and additions which were found during field edit were
applied to the map manuscripts. A final compilation office review was then made.

FORWARDED TO Washington, D. C. DATE July 23, 1946

R. A. Earle
Chief of Party
COMPARISONS (continued)

Changes due to erosion or building up were noted at the following places:

The north shore of an unnamed island at Lat. 45° 34' 30" and Long. 122° 27' 30" has built up from 20 to 100 meters. The east end of this same island has receded approximately 100 meters.

The north shore of Government Island has built up for distances ranging from 10 to 100 meters.

The northeast shore of Government Island has receded as much as 50 meters and riprap has now been placed along this shore to prevent further erosion. The south shore of this island has receded slightly.

At some places where the chart and map manuscript are in disagreement, it is evident that the bank line as shown on the map manuscript is the high-water line of the chart.

COMPARISON WITH PREVIOUS SURVEYS: TOPO., HYDRO., AND CHARTS:

Due to a scale difference only a visual comparison could be made with the USGS CAMAS Quadrangle. Common planimetric detail is in fair agreement however, the high-water line is in disagreement in several places due to a datum difference.

By using the vertical projector, comparison could be made with nautical chart No. 5136. It was noted that the high-water line on the chart seems higher than that on the map manuscript. (Continued on Reverse Side)

REMARKS: All corrections and additions which were found during field edit were applied to the map manuscript. A final compilation office review was made.

FORWARDED TO Washington, D.C. DATE July 23, 1946

R. A. Earle Chief of Party
COMPARISONS (Continued)

Changes due to erosion or building up were noted at the following places:

On the north shore of Lady Island the bank has eroded for distances ranging up to 25 meters. On the south shore of this same island the shoreline has receded as much as 25 meters.

Between Long. 122°25'00" and Long 122°25'40", along the north shore of Camas Slough, the shoreline has receded for distances ranging from 1 to 25 meters.

At some places where the chart and map manuscript are in disagreement it is evident that the bank line of the map manuscript is the high-water line of the chart.

FIELD INSPECTION REPORT
QUADRANGLES T-3684 and T-3685
PROJECT CS-322

1 to 25: Except for the supplemental data listed below under side headings 10 and 17, all information applicable to these side headings is given in the "Field Inspection Report, Project CS-322, Area of the First Radial Plot". This report was enclosed with the Descriptive Report for Quadrangles T-8709 and T-8710, which has been submitted.

10. Details Offshore from the High-Water Line:

The heights of the rocks located in Quadrangle T-3685 at the west end of Camas Slough, on Ione Reef, and at the east end of Lady Island, will be reported by the Ship WESTDAHL.

17. Boundary Monuments and Lines:

In addition to the Donation Land Claims in Clark County, Washington, other claims which were granted by the Federal Government, have been compiled on the map manuscripts at the request of Mr. Charles Deaco, Clark County Engineer and Mr. Bernard Morris, Clark County Surveyor. These claims are, as in the case of the Donation Land Claims, the basis for property surveys.

These claims include pre-emption claims, timber claims, and mineral claims. No attempt was made to distinguish between these various types of claims inasmuch as the required information was not available at the Clark County Court House. These other claims were listed with the Donation Land Claims in the Special Report on Boundary Monuments and Lines; however, they are noted as Land Claims rather than Donation Land Claims on the Map Manuscripts.

Approved by: Respectfully submitted:

R. A. Earle Charles Hanavich
Chief of Party Photogrammetric Engineer

*Special Report: Investigation of Boundary Monuments and Land Lines ... Area of the First Radial Plot.
Filed in Rm. Photogram. Gen. Files under "Special Reports"
Amendment to File Data

Since project CS-522 was reviewed and registered, it was decided that a Completion Report for each project would be written and filed in the Bureau Archives. This Completion Report should include all special reports, correspondence of probable future interest or importance, a project layout, a photo index, and a copy of the initial and supplementary project instructions.

A special file has been set up in the library for Division of Photogrammetry projects. The Completion Report and other special reports will be filed under the project number, and these will be arranged in numerical order.

The following reports and records for project CS-522 are now filed in the Bureau Archives, rather than according to the red notes in the Descriptive Reports:

A. Special Reports:
   1. Investigation of Boundary Monuments and Land Lines for Radial Plots 1, 2, 3, and 4
   2. Radial Plots 1, 2, 3, and 4
   3. Legal descriptions of boundaries
   4. Field Inspection for plots 1, 2, 3, and 4

B. Computations: Triangulation and Traverse
   Access No. 943/GBZ 0-6705

C. Field records:
   1. Horizontal Angles (form 250) 12 vol. 943/GH 0-7082
   2. Traverse Measurements (form 590) 9 vol.
   3. Descriptions (form 525) and recoveries (form 526)
   4. Pricking cards (form N-922-1) for tri. and trav.
   5. Recoverable Topographic stations (form 524)

D. Recovery of bench marks (form 685) Filed in Leveling Sec.

E. Supplemental data; maps, plans
   These were transferred to the Map Section (Mr. Stanley, Chief), Division of Charts, to be selectively filed or discarded.

LTS
January 1951
26. **Control:**

Sixteen horizontal control stations, located in the area of the two map manuscripts, were recovered. Ten of these were satisfactorily identified on the field photographs. Two permanent triangulation stations and one temporary traverse station were established to supplement the existing horizontal control stations.

The position of triangulation station TEE 2, 1940 (OREG.), U.S.E. was plotted on map manuscript No. T-8685 from plane coordinates, Oregon North Zone. The field unit recommended that this station be listed as destroyed, but it could be used for controlling the photographs. See Form 526 for a detailed description.

A complete tabulation of the horizontal control stations, which were originally in the area of these two map manuscripts, is attached to the "Field Inspection Report, Project CS-322, Area of the First Radial Plot". This report is included with the descriptive report for map manuscripts T-8709 and T-8710 which was forwarded to the Washington Office on July 5, 1946.

A complete tabulation of supplemental horizontal control stations which were established in 1945 and 1946 is attached to a special report, "Third Order Triangulation and Traverse, Project CS-322, Area of the First Radial Plot", which was forwarded to the Washington Office on July 12, 1946.

27. **Radial Plot:**

The facts concerning the radial plot for the area of these two map manuscripts have been fully covered in the "Descriptive Report, First Radial Plot, Project CS-322". This radial plot report was included with the descriptive report for map manuscripts T-8709 and T-8710 which was forwarded to the Washington Office on July 5, 1946.

28. **Detailing:**

Compilation was done in accordance with instructions for Project CS-322 and special instructions applicable to planimetric mapping.

The photography was adequate. The refight photographs made on Nov. 21, 1945, were helpful in determining the high-water line and other shoreline details. They were not satisfactory for accurately determining the detail falling in the outer limits of the photograph or for orientation and use.
in the radial plotting of the minor pass points. In some cases it was
difficult to interpret, from the ratio print, the correct shape and size
of buildings. This was attributed to the loss of sharpness when the
contact prints were enlarged.

When any item relative to the field inspection data was doubtful, it could
be clarified by consultation with the field man who had done the inspection
work. It was, therefore, unnecessary to make discrepancy overlays for the
field edit work.

The classification symbols for tree or brush areas are placed on the inside
of the curled line which denotes the limits of said areas. These curled
lines and the letter symbols are in green acid ink.

All boundary and land claim lines are shown by appropriate symbols in red
acid ink. A legend shown in the margin of each map manuscript identifies
these lines.

Pertinent notes, relative to various items, have been lettered in the margins
of the map manuscripts.

29. Supplemental Data:

The following maps or plans were used to supplement the photographs:

Industrial map of Camas and Washougal, Wash., Scale 1" = 1000'.
Forwarded to Washington Office on July 15, 1946.

Sheets 36, 37, 44, and 45 of a set of 74 sheets published by the
Multnomah County, Oregon, Assessor's Office, Scale 1" = 600'.
Forwarded to Washington Office with the Geographic Names Report
on July 15, 1946.

Black and white print of Camas, Washington, Scale 1" = 400'.
Compiled for Camas Street Department and forwarded herewith.

Photostat, Aluminum Co. of America, plant map, Scale 1" = 200'.
Forwarded herewith.

Black and white print, Crown Willamette Paper Co., Camas Mill
Scale 1" = 200'. Forwarded herewith.

30. Mean High Water Line:

The mean high-water line was detailed from information submitted by the
field parties and from stereoscopic examination of the photographs. Most
of the shoreline data is shown on field photographs taken on Nov. 21, 1945.
The mean high-water line is shown by a continuous heavy-weight black acid
ink line at a plane five feet above the U.S. Engineers low-water datum which is 1.29 ft. above mean sea level. There are no marsh areas immediately bordering the mean high-water line. The bank line at the normal flood stage of the river has been noted.

31. **Low-Water and Shoal Lines:**

The field inspection unit did not furnish any information on definite or indefinite low-water lines in the area of these two map manuscripts. Approximate shoal lines have been shown by a light dashed black acid ink line as indicated by the field inspection unit.

32. **Details Offshore from the Mean High-Water Line:**

The offshore details include rocks, boulder areas, and small islands. They have been shown in accordance with the data submitted by the field inspection parties.

33. **Wharves and Shoreline Structures:**

Piers, wharves, dolphins, etc., have been shown.

34. **Landmarks and Aids to Navigation:**

In the area of Map Manuscript No. T-8685, MAST, 1946, is recommended as a landmark for nautical charts. Form 567 is attached.

In the area of Map Manuscript No. T-8685, the landmark TOWER shown on nautical chart No. 6156 is recommended for deletion. Form 567 is attached.

The below listed three aids to navigation, for which Form 567 is attached, fall in the area of T-8684:

- **Mc GUIRE ISLAND LOWER DIKE LIGHT**
- **HASSAHO ROCK LIGHT**
- **QUARRY LIGHT**

The below listed nine aids to navigation, for which Form 567 is attached, fall in the area of T-8685:

- **CAMAS SLough RANGE FRONT LIGHT**
- **CAMAS SLough RANGE REAR LIGHT**
- **LADY ISLAND RANGE FRONT LIGHT**
- **LADY ISLAND RANGE UPPER LIGHT**
- **CAMAS LIGHT**
- **IONE REEF LIGHT**
- **TROUTDALE LIGHT**
- **GOVERNMENT ISLAND RANGE FRONT LIGHT**
- **GOVERNMENT ISLAND RANGE REAR LIGHT & LADY ISLAND RANGE REAR LIGHT** (Two names are listed for light on this structure)
35. **Hydrographic Control:**

See paragraph 12 of the "Field Inspection Report, Project CS-322, Area of the First Radial Plot" which is included in the Descriptive Report for Map Manuscripts Nos. T-8709 and T-8710. This report was forwarded to the Washington Office on July 5, 1946.

36. **Landing Fields and Aeronautical Aids:**

A small portion of Troutdale Airport falls in the southeast corner of Map Manuscript No. T-8685.

There are no aeronautical aids within the limits of these two map manuscripts.

37. **Geographic Names:**

Only undisputed geographic names are shown on the map manuscripts.

Geographic names are the subject of a special report, "Investigation of Geographic Names, Project CS-322, Area of the First Radial Plot", which was forwarded to the Washington Office on July 12, 1946.

38. **Recoverable Topographic Stations:**

Copies of Forms 524 are being submitted for the one recommended landmark and twelve aids to navigation listed in paragraph No. 34 of this descriptive report.

In addition copies of Forms 524 are being submitted for the following:

- T 1-N R 3-E, Section Corner 4,5,8,9, 1945
- T 1-N R 3-E, Section Corner 5,6,7,8, 1945
- T 1-N R 3-E, Section Corner 3,4,9,10, 1945

39. **Junctions:**

Complete and satisfactory junctions have been made between map manuscripts Nos. T-8684 and T-8685 and with adjoining map manuscripts.

40. **Bench Marks:**

Bench marks have been detailed as identified by field inspection units. Each bench mark is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 foot lettered nearby.

41. **Comparison with Existing Topographic Surveys:**

See record sheet which accompanies each map manuscript.
45. **Comparison with Nautical Charts:**

See record sheet which accompanies each map manuscript.

J. Edward Deal, Jr.  
Photogrammetric Engineer
FIELD EDIT REPORT  
T-3684 and T-3685  
Project CS-322

46. Methods:

These map manuscripts were field edited in accordance with the Field Edit Instructions dated 24 August 1945. All corrections and additions have been made accurately on the field edit print in colored ink; or the place where a correction or addition is to be made has been indicated by a note to refer to the field photograph. All features which are to be deleted have been crossed out in colored ink.

New buildings were located either by pacing or taping in the field and are shown on the field edit prints. A legend on each of these prints will furnish a key to all symbols and to the different colored inks used.

47. Adequacy of the Compilation:

The planimetry as delineated on the map manuscripts may be considered as complete and adequate with respect to the corresponding ground detail. Except for the deletions, corrections, additions, and notations made on the field edit prints, it is also accurate in regard to relative position.

In the town of Camas, where the relative widths of streets (between curbs) seemed to be in error, field measurements were taken and noted on sheet T-3685. The boundary limits of Blue Lake Park were obtained by the field edit party. Any drafting of detail that seemed to be questionable was called to the attention of the compilers and reviewers by notes.

Shoreline features could not be accurately checked because of the extreme high-water caused by the spring freshet. Some changes and additions, such as recently excavated ditches, have been noted.

In accordance with the field edit instructions, the accuracy and completeness of the map manuscripts in regard to geographic names, boundaries, public land lines, and detail were checked by Mr. B.G. Smith, City Engineer of Camas, Washington, and Mr. C.G. Powers, County Surveyor of Multnomah County, Portland. The geographic names shown on these sheets have been reviewed by Mr. Lewis A. McArthur of Portland.

48. Accuracy Tests:

Results of the horizontal accuracy test on T-3685 are attached to the back of this report. For data on the traverse, refer to "Special Report, Third-Order Triangulation and Traverse, Project CS-322, Area of the First Radial Plot", which has been submitted.

For additional map accuracy tests adjacent to the area of these map manuscripts, refer to the field edit reports on T-3677, T-3683, and T-3692.

These maps are believed to comply with the horizontal accuracy specifications.
49. **Bench Mark Elevations:**

The elevations of the bench marks shown on the field edit prints have been checked.

50. **Geographic Names:**

A thorough investigation was made to ascertain a geographic name established by local usage of the island just north of the east end of Government Island. The below listed individuals, who were consulted, claim that this island does not have a name.

- H. G. Richardson, City Surveyor  
  City Hall, Portland, Ore.

- Claude Powers, County Surveyor  
  County Court House, Portland, Ore.

- Robert A. Ostrom, River Pilot of USBR Tug "Gen. C. F. Powell"  
  4125 NE 72 Avenue, Portland, Ore.

- Bernard Morris, Asst. County Surveyor  
  Clark County Court House, Vancouver, Wash.

HORIZONTAL ACCURACY TEST
Map Manuscript T-8685
Project CS-322

This test consists of a spur traverse between triangulation station CAMAS, 1938 and A-6 (Temp. Sta.), 1945. The traverse is 1.5 statute miles in length and contains two test points within the limits of this manuscript. In the tabulation the geodetic position from the traverse computation is referred to as T.P.No., and the scaled position from the map manuscript (Scale 1:8,000) is referred to as M.M.No.

TABULATION OF TEST POINTS

<table>
<thead>
<tr>
<th>Description</th>

DIVISION OF PHOTOGRAMMETRY
Review Report of
Planimetric Map Manuscript No. T-3684

The first radial plot for Project CS-322, consisting of 14 surveys, was completed 14 March, 1946. Survey T-3684 is one of the first manuscripts in this group of surveys to be completed and reviewed. All of the field edit data were applied to the manuscript by the Portland, Oregon, Photogrammetric Office prior to final review.

27. RADIAL PLOT

Each of the office photographs within the area of the survey were oriented separately under the manuscript, holding to the existing horizontal control stations and photograph centers as established by the main radial plot, and the position of the planimetric details and pass points checked by radial intersections. The radial plot is believed to be within the required accuracy. Planimetric details in the following areas, however, failed to meet the standard of accuracy:

McGuire Island Lower Bike Light: Position of this light and planimetry in immediate vicinity were changed a maximum of 2 mm.

Latitude 45° 34' 40" and Longitude 122° 27': Shore line and off-shore details changed in position a maximum of 2 mm.

Government Island: Roads changed in positions from 1 mm to 2 mm.

The planimetry in these areas were corrected by the reviewer, holding to re-intersected and newly established detail points. The errors in the original detailing apparently were due to errors in location of detail points by the compiler.

28. DETAILING

The field inspection data of December 1945 and February 1946; and the results of the field edit data of May 1946 as applied to the manuscript by the Portland Photogrammetric Office were checked during the review.

A drafting overlay was prepared to facilitate the smooth drafting of this manuscript.

34. LANDMARKS AND AIDS TO NAVIGATION

The position of McGuire Island lower Bike light, as radially plotted by the compilation office, was found to be 1.6 mm in error after re-intersecting this light during review. The position has been listed of Form 567 and forwarded to Nautical Charts to supersede the position submitted originally.

38. COMPARISON WITH PREVIOUS TOPOGRAPHIC SURVEYS:

The planimetric features appearing on the following surveys are superseded by Survey T-3684 in all common areas:

<table>
<thead>
<tr>
<th>Survey</th>
<th>Scale</th>
<th>Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>T-2085</td>
<td>1:10,000</td>
<td>1891</td>
</tr>
<tr>
<td>T-2522</td>
<td>1:10,000</td>
<td>1890</td>
</tr>
</tbody>
</table>

Considerable changes were noted upon comparison with these surveys,
especially the island just northeast of Government Island. This island now lies much farther to the west.

33. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

This side-heading is not applicable to Survey T-8684

44. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES:

In general, planimetry common to the quadrangle and the manuscript are in good agreement, except for the position of the M.N.W. line, which is probably due to datum difference.

The planimetry shown on Survey T-8684 supersedes that appearing on the above-mentioned quadrangle.

45. COMPARISON WITH NAUTICAL CHARTS:

No. 6156 1:40,000 1942

Discrepancies, in addition to those listed below, have been noted in the Record Sheet which accompanies the Descriptive Report.

The first light just southeast of McGuire Island Lower Dike Light, as shown on the chart, was noted as a dolphin by the field inspection party and shown as such on the manuscript.

Hassalo Rock, appearing on the chart, was not shown on the manuscript, because its image was not visible on any of the photographs.

This survey has not been applied to Chart 6156 at the date of this review.

Chief, Division of Photogrammetry

Chief, Division of Coastal Surveys
DIVISION OF PHOTOGRAMMETRY
Review Report of
Planimetric Survey Manuscript No. T-8685

Subjects (paragraph numbers) not used in this review have been adequately covered in other parts of this report.

23. DETAILING

The field inspection data of November 1945 and February 1946; and the field edit data of May 1946 as applied to the manuscript by the Portland Photogrammetric Office, were checked during the review.

34. Landmarks and Aids to Navigation

The Camas Pulp Mill Stack (concrete) shown on Chart 6156 as a landmark has been destroyed. Form 567 has been submitted for its deletion. However, the triangulation intersection station Camas, Crown-Willamette Paper Co., Brick Stack (largest and tallest) has been established in 1945 in almost the same position. Form 567 has been submitted for this new landmark.

43. Comparison with Previous Topographic Survey

The planimetric features appearing on the following survey are superseded by Survey T-8685 in all common areas; except for off-shore rocks:

   T-2522       1:10,000       1900

44. Comparison with Existing Topographic Quadrangles

The planimetry of T-8685 supersedes that of the above-named quadrangle in their common areas.

45. Comparison with Nautical Chart

   No. 6156       1:40,000       1942, revision Oct. 1945

The Record Sheet accompanying this descriptive report gives adequate comparison data.

This Survey sheet has not been applied to Nautical Chart 6156 as of the date of this review.

49. Donation Land Claims, Land Claims, and Section Lines:

South of the Columbia River: Donation Land Claim lines on the map manuscript were checked against Multnomah County assessment maps (numbers 44 and 45) and against General Land Office plats.

North of the Columbia River: Donation Land Claim lines on the map manuscript could be checked only against Field Inspection data on the contact prints Nos. 727, 736, 739, 759, 751, and 755 upon which the lines had been drawn in red.

o/o Swan Island Postal Station
Portland 18, Oregon

Subject: Map manuscript T-5685

With the materials forwarded to this office for map manuscript T-5685 there were three plates showing the street system in the city of Camas, Washington, and on one of these copies was the note, "All names of streets have been changed. Copy of revisions can be obtained from local newspaper office, Camas Post, 25 cents." The three plates showing the street system have identically the same names and these also correspond to the names shown on the map manuscript.

Please inform us by return mail if we are to accept the names shown on the maps and on the map manuscript, and if we are not, please obtain the Camas Post map referred to and forward it at your earliest convenience.

From: Lt. Comdr. R. A. Earle

Subject: Map Manuscript T-8685

In reply to the above reference, the reason for having the note "All names of streets have been changed, etc.", on a copy of one of the plats showing the street system of Camas, Washington, is unknown.

The names of streets as shown on the plat and map manuscript are correct and these names were checked during field edit.

It is probable that the copy of the plat was one which had been posted several years ago when names were changed, and that personnel of the County Courthouse, instead of issuing copies of that plat, referred residents to the local newspaper office.

---

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under “Comparison with Charts” in the Review.
