COMPARISON WITH PREVIOUS SURVEYS; TOPO., HYDRO., AND CHARTS:
Due to scale difference only a visual comparison was made with the U.S.G.S.

Portland, Ore. - Wash. 15 quadrangle, Scale: 1:62500...Planimetry common to
the quadrangle and map manuscript is in good agreement.

Comparison was made with Nautical Chart No. 6155, Scale: 1:20,000 by use of
the vertical projector. In general the bridges, wharves, piers, docks, etc.,
(see reverse side)

REMARKS...All corrections and additions which were found during field edit were
applied to the map manuscript. A final compilation office review was then made.

FORWARDED TO...Washington Office...DATE...November 5, 1946

COMPARISONS (continued)

common to the map manuscript and chart are in fair agreement. Many changes have occurred along the shoreline since the chart was made. Along the northeast shoreline of the Willamette River between Lat. 45° 31' 45" and Lat. 45° 32' 15", the high-water line of the chart and map manuscript are not in agreement. The chart also differs with Topographic Survey No. 6619a of 1938, 1939, in this area.

Comparison was made with Topographic Surveys No. 6619a and No. 6619b of 1938, 1939, by use of prints of the topographic surveys on clear acetate. Scale: 1:8000 furnished by the Washington Office. Planimetry common to the two topographic surveys and the map manuscript is in very good agreement.

Daily readings of the U.S. Engineer tide gauge located at Government Moorings on the west shore of the Willamette

Tide from (III): River just south of the St. Johns Bridge. The 0+00 of the gauge is M.L.W. Columbia River, which is 1.29 ft. above Mean Sea Level. Spring Range:

Camera: (Kind or source) K 17, 12 inch focal length.

Field Inspection by: See remarks, page 3 date:

Date of Mean High-Water Line Location (III): February 1946
NOTE: The U.S. Engineers photographs taken on September 26, 1944 were used to delineate the high-water line of the Willamette River shown on the map manuscripts. They were taken when the water level in the Willamette River was 1.65 ft. above M.L.W. From these a water line of 5.0 ft. above M.L.W., the datum of this project was delineated.

FIELD INSPECTION REPORT
QUADRANGLES T-8687 and T-8688
PROJECT CS-322

1 to 25: All the information that is applicable to these side headings is given in the "Field Inspection Report, Project CS-322, Area of the Second Radial Plot", which was enclosed with the "Descriptive Report for Quadrangles T-8674 and T-8675". This Descriptive Report has been submitted. Side heading numbered 13, discussed in the above mentioned field inspection report, is not applicable to Quadrangles T-8687 and T-8688.

Approved by:

R. A. Earle
Chief of Party

Respectfully submitted:

Charles Hanavich
Topo. Engineer
Amendment to File Data

Since project CS-322 was reviewed and registered, it was decided that a Completion Report for each project would be written and filed in the Bureau of Archives. This Completion Report should include all special reports, correspondence of probable future interest or importance, a project layout, a photo index, and a copy of the initial and supplementary project instructions.

A special file has been set up in the library for Division of Photogrammetry projects. The Completion Report and other special reports will be filed under the project number, and these will be arranged in numerical order.

The following reports and records for project CS-322 are now filed in the Bureau Archives, rather than according to the red notes in the Descriptive Reports:

A. Special Reports.
   1. Investigation of Boundary Monuments and Land Lines for Radial Plots 1, 2, 3, and 4
   2. Radial Plots 1, 2, 3, and 4
   3. Legal descriptions of boundaries
   4. Field Inspection for plots 1, 2, 3, and 4

B. Computations: Triangulation and Traverse 943/072 G-6785

C. Field records:
   1. Horizontal Angles (form 250) 12 vol. 943/GH G-7082
   2. Traverse Measurements (form 590) 943/GH G-7083
   3. Descriptions (form 525) and recoveries
      (form 526) 943/GA G-6786
   4. Pricking cards (form M-982-1) for tri. and Trav.
   5. Recoverable Topographic stations (form 524) Div. of Photogrammetry General File

D. Recovery of bench marks (form 685) Filed in Leveling Sec.

E. Supplemental data: maps, plans
   These were transferred to the Map Section (Mr. Stanley, Chief), Division of Charts, to be selectively filed or discarded.

275
January 1951
26. **Control:**

At the time this project was started there were one hundred and fifteen existing horizontal control stations in the area of these two map manuscripts. Eighty were recovered and twenty-five of these were identified for use in the radial plot.

One new triangulation station was established in the north central part of T-8688 namely: BEAUMONT SCHOOL STACK, 1946. This station was helpful in rigidly fixing the photographs in that area.

Due to the large number of horizontal control stations in the area of Map Manuscript No. T-8687, and to the density of the street system, public buildings, and numerous notes pertaining thereto, only the identified horizontal control stations are shown on the map manuscript. The geographic positions of the recovered but not identified horizontal control stations are plotted on an overlay on acetate with the names of the stations tabulated and attached thereto. In the area of Map Manuscript No. T-8688 all recovered horizontal control stations are plotted directly on the map manuscript.

A complete tabulation of the horizontal control stations which were originally in the area of these two map manuscripts is attached to the "Field Inspection Report, Project CS-322, Area of the Second Radial Plot". This report is included with the descriptive report for map manuscripts numbers T-8674 and T-8675, which was forwarded on October 11, 1946.

The one new triangulation station established in this area is listed in a tabulation attached to a special report, "Third-Order Triangulation and Traverse, Project CS-322, Area of the Second Radial Plot", which has been forwarded.

Your attention is called to a letter to the Director, dated October 17, 1946, on "Erroneous Listing of Intersection Station, PORTLAND, OLDS, WORTMAN & KING DEPARTMENT STORE, BLACK IRON STACK, 1916, r1942".

27. **Radial Plot:**

The facts concerning the radial plot for the area of these two map manuscripts have been fully covered in the "Descriptive Report, Second Radial Plot, Project CS-322". This radial plot report was included with the descriptive report for map manuscripts numbers T-8674 and T-8675, which was submitted to the Washington Office on October 22, 1946.
Detailing:

Compilation was done in accordance with instructions for Project CS-322 and special instructions applicable to planimetric mapping.

The high-water line and shoreline features were delineated and detailed from photographs obtained from the office of the U.S. Engineer Corps, Portland, Oregon, and ratio printed at a scale of 1:8000 by the Coast & Geodetic Survey in the Washington Office. In all inland areas the original photography was adequate. The 1:5000 scale contact prints, taken along the shorelines of the Willamette River, were a great help in interpreting detail.

In some cases it was difficult to interpret, from the ratio print, the correct shape and size of buildings. This was attributed to the loss of sharpness when the contact prints were enlarged.

When any item relative to the field inspection data was doubtful, it could be clarified by consultation with the field man who had done the inspection work. It was, therefore, unnecessary to make discrepancy overlays for the field edit work.

The classification symbols for tree or brush areas are placed on the inside of the curled line which denotes the limits of said areas. These curled lines and the letter symbols are in green acid ink.

All boundary and land claim lines are shown by appropriate symbols in red acid ink. A legend shown in the margin of each map manuscript identifies these lines.

Pertinent notes, relative to various items, have been lettered in the margins of the map manuscripts.

The names of public buildings in the area of Map Manuscript No. T-8687 have been tabulated in the right hand margin.

29. Supplemental Data:

The following maps or plans, which will be forwarded with the map manuscripts, were used to supplement the photographs:

Blue print, Layout plans, Albina Eng. & Mach. Works, Inc. Scale: 1" = 50'

Black line print, Southern Pacific Co. Station plan, East Portland, Powell St. to 3rd Ave. Scale: 1" = 100'

Black line print, Station map, Spokane, Portland & Seattle Ry., Portland Terminals (on two prints) Scale: 1" = 100'

Black line print, West Side Harbor Survey, N.W. 19th Ave. to N.W. Nicolai St. Scale: 1" = 50'
Black line print, West Side Harbor Survey, N.W. 14th St. to N.W. 20th St. Scale: 1" = 50'

Black line print, Station plan, Southern Pacific Co., East Portland, Powell St. to Market St. Scale: 1" = 100'

The following maps and plans which were also used, will be forwarded when map manuscripts adjacent to T-8697 and T-8698 are corrected after field edit:

Black line print, Northern Pacific Ry., operated by S.P. & S. Ry. Co., Terminals Div., Scale: 1" = 400'

Blue print, Willamette Iron & Steel Corp. Scale: 1" = 60'

Black line print, Yard, Northern Pacific Terminal of Oregon, Scale: 1" = 200'

Black line print, Union Pacific R.R. Yards, Scale: Unknown

Blue line print, Map of the City of Portland, Scale 1" = 1500'

Blue line prints, Sheets 20, 21, 27, 28, 32, and 33 of a set of 74 sheets published by the Multnomah County Assessor’s Office Scale 1" = 600'

30. **Mean High-Water Line:**

There are no high-water lines within the area of Map Manuscript No. T-8698. That portion of the Willamette River which is used for the main harbor of Portland, Oregon, falls within the area of Map Manuscript No. T-8697.

All of the high-water line was detailed from information submitted by the field parties, which was shown on single lens ratio prints, Scale 1:8000. These photographs were taken by the U.S. Engineers at a contact scale of 1:10000 on Sept. 26, 1944, when the water level of the Willamette River was 1.65 ft. above mean low-water. The field inspector’s interpretation of the high-water line was verified by stereoscopic examination of the photographs before detailing was attempted.

The mean high-water line is shown by a continuous heavy-weight black acid ink line at a plane five feet above the Engineers low-water datum which is 1.29 feet above mean sea level.

There are no marsh areas immediately bordering the high-water line.

31. **Low-Water and Shoal Lines:**

The field inspection unit indicated a definite low-water line at several places along the shorelines of the Willamette River. This low-water line has been shown by a light-weight dash and dot black acid ink line and appropriately noted. The field inspection unit did not indicate any shoal areas.
32. **Details Offshore from the Mean High-Water Line:**

There are no offshore details in the Willamette River within the area of Map Manuscript No. T-8687.

33. **Wharves and Shoreline Structures:**

Six of the principal bridges which span the Willamette River and over which most of the traffic connecting the East and West sides of Portland, Oregon, flows, have been shown. There are many piers, wharves, dolphins, old piling areas, etc., in this part of the Willamette River.

34. **Landmarks and Aids to Navigation:**

Forms 567 are being submitted for the following:

- **Recommended for charting as new nautical landmarks:**
  - MAST (Old Battleship Oregon), 1946, Historical Monument
  - STACK (Tri. Sta. PORTLAND, GENERAL ELECTRIC Co. (Concrete Stack), 1938)
  - TANK (Tri. Sta. PORTLAND, STETTLER Co. TANK, 1935)

- **Recommended for retention as nautical landmarks:**
  - STACK (Tri. Sta. PORTLAND RY. LIGHT & POWER Co. STACK, 1935)
  - STACK (Tri. Sta. PORTLAND, U.P.R.R. Co. STACK, 1935)
  - TANK (Tri. Sta. PORTLAND, CROWN MILLS, BLUE TANK, 1935)
  - TANK (Tri. Sta. PORTLAND, U.P.R.R. Co. WHITE TANK, 1935)
  - CLOCK TOWER (Tri. Sta. PORTLAND, UNION DEPOT CLOCK TOWER, U.S.E., 1906)

Forms 567 are being submitted recommending the deletion as a nautical landmark of "TANK" (Tri. Sta. PORTLAND, TERMINAL NO. 1, ELEV. TANK, 1935, which will be torn down in the near future.

There are no fixed aids to navigation in this part of the Willamette River.

35. **Hydrographic Control:**

Sixty-seven objects were located radially, for use as temporary hydrographic signals. These were used during the recent hydrographic survey of this part of the Willamette River, by the ship "Westdahl". They are shown on the map manuscript with 2.0 mm black acid ink circles and a short description is lettered nearby. This office furnished the vessel "Westdahl" with black and white prints, Scale: 1:5000, of the shoreline and adjacent detail, and with typewritten lists of the descriptions of the temporary hydrographic stations.

36. **Landing Fields and Aeronautical Aids:**

There are no Landing Fields or Aeronautical Aids within the limits of these two map manuscripts.
Since Δ is as abundant as the "STACK", "MAST" & "FLAGPOLE" (or the north edge of the area), these markers are not necessary and have been removed from the published map.

39. **Junctions:**

Complete and satisfactory junctions have been made between Map Manuscripts No's. T-8687 and T-8688, and with adjoining map manuscripts.

40. **Bench Marks:**

Bench marks have been detailed as identified by the field inspection units. Each bench mark is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 ft. lettered nearby.
Investigation of Boundary Monuments and Land Lines
Area of the Second Radical Plat
Filed in Div. Phagam General Fils under "Sp'1 Rpts."

...
41. Donation Land Claims and Section Lines:

Donation Land Claims and section lines were located on ozalid prints of the map manuscripts after the initial compilation had been completed. These lines, with pertinent explanatory notes, were placed on the prints in red and purple ink respectively, by the field party; and were then traced on the map manuscripts by the compilers. The ozalid prints containing these lines are being forwarded.

44. Comparison with Existing Topographic Surveys:

See record sheet which accompanies each map manuscript.

45. Comparison with Nautical Charts:

See record sheet which accompanies each map manuscript.

Approved and forwarded:

Robert A. Earle
Chief of Party

Respectfully submitted:

October 29, 1946

J. Edward Deal, Jr.
Photogrammetric Engineer
46. **Methods:**

These map manuscripts were field edited in accordance with the Field Edit Instructions dated 24 August, 1945. All corrections and additions have been made accurately on the field edit prints in colored ink, or the place where a correction or addition is to be made has been indicated by a note which refers to a field photograph. All features which are to be deleted have been crossed out in colored ink.

New buildings were located either by pacing or taping and are shown on the field edit prints. A legend on each of these prints will furnish a key to all the symbols and to the different colored inks used.

47. **Adequacy of the Compilation:**

The planimetry as delineated on the map manuscripts may be considered as complete and adequate with respect to the corresponding ground detail. Except for the deletions, corrections, additions, and notations made on the field edit prints, it is accurate, also, in regard to relative position.

Any omissions or drafting of detail that seemed to be questionable was called to the attention of the Compilation Office by notes. If there seemed to be a discrepancy in the drafting of roads or streets, field measurements were taken and indicated on the field edit prints.

In T-8687 all the shoreline features were checked. Newly constructed buildings, dolphins, piling, and changes in piers were noted by the field editor. The names of several churches which were omitted during the field inspection were obtained during the field edit. Other minor changes and omissions in this quadrangle and in T-8688 were noted and corrected during the field edit. The additional names and numbers of streets which were indicated on the prints were obtained and verified from official street signs.

It is to be noted that the names of city parks should not include the word "city" as a part of the name for the park. For example in T-8688, the name is not Grant City Park but Grant Park (city).

Some difficulty was encountered in determining the ends of submarine cable crossings in T-8687 because of docked ships and barges; however, it is believed that all cable crossings or pipeline and cable areas have been indicated. The vertical and horizontal clearances of all the bridges were found to be in agreement with the U.S. Coast Pilot - Pacific Coast (sixth edition, 1942) except for the vertical clearance at the Ross Island Bridge.
The vertical clearance of 124 feet above the datum plane for this Project or 5 feet above the UBE adopted low-water plane is believed to be correct. This fact was verified by Mr. C. G. Powers, Multnomah County Surveyor, who stated that his records indicate that the vertical clearance of this county owned bridge is 129 feet above the UBE adopted low-water plane.

In accordance with the field edit instructions, the map manuscripts were examined for completeness and accuracy in regard to geographic names, boundaries, public land lines, and detail by Mr. H. C. Richardson, City Surveyor, Portland. The geographic names in this area have been reviewed by Mr. Lewis A. McArthur, Collaborator for the U.S. Coast & Geodetic Survey.

48. Accuracy Tests:

Results of the horizontal accuracy test on T-8687 and T-8688 are attached to the back of this report.

These maps are believed to comply with the standard map accuracy requirements.

49. Bench Mark Elevation:

The elevations of the bench marks shown on the sheets have been checked. Some of the elevations at the USC & GS bench marks are unadjusted elevations and are subject to correction when adjusted.

50. Donation Land Claims and Section Lines:

Donation land claims and section lines were located on additional ozalid prints of the map manuscripts, by a special field party, after the initial compilation had been completed. These lines were indicated in red and purple ink respectively, and supplemented if necessary, by explanatory notes. These additional ozalid prints will be submitted with the field edit sheets.

51. Geographic Names:

Refer to the addendum in the "Special Report on Geographic Names Project CS-322, Area of the Second Radial Plot", for information on the following geographic names:

ALBINA, ALAMEDA, IRVINGTON, ROSE CITY, LAURELHURST, LADDS ADDITION

HORIZONTAL ACCURACY TEST
Map manuscript T-8688 & T-8687

Plane Coordinate positions, which were established from the various traverses run by the City of Portland, on the Lambert Projection, Oregon State, North Zone, were obtained from the City Surveyor of Portland, Mr. H. G. Richardson, who stated that these coordinate positions were of fourth-order accuracy or better and that no position is in error more than three feet.

Since the majority of these coordinate positions were for section, quarter section or city boundary corners, which were located at the centerline intersections of streets or roads, it was decided to utilize most of them as test points to check the accuracy of the map manuscripts.

The location of each of these points was indicated by the City Surveyor on several County Assessors Maps, which will be forwarded to Washington. Each position used as a test point has been assigned a numerical test point number and is indicated in red on the County Assessor's Map or sheet attached thereto.

In the tabulation of the test points, the coordinate position is referred to as T.P.No. and the scaled position from the map manuscript (Scale 1:8000) is referred to as M.M.No.

**TABULATION OF TEST POINTS (T-8688)**

<table>
<thead>
<tr>
<th>Description of Point</th>

26. **Control.**

Nineteen of the recovered stations were identified for use in the radial plot and were plotted on the manuscript in the Portland Compilation Office. The remaining stations had been accurately plotted on an overlay ruled with one minute grids. These stations were pricked on the map manuscript by holding the manuscript over the overlay and registering the grid minute by minute. The stations were then checked for accuracy against the geographic positions of the stations. Many of the stations were prominent objects on buildings and it was necessary to recompile the buildings so that they fell in correct relation with the station and its description. A list of the stations, originally attached to the overlay sheet, was attached to the map manuscript and was identified on the manuscript by numbers corresponding to the numbers on the list.

28. **Detailing.**

Although the detailing was generally complete and accurate, a number of corrections were necessary by the reviewer because of a tendency on the part of the compiler not to allow for relief displacement of the image of elevated objects such as buildings and tanks, viz:

A tank, station No. 49, was moved due north about 0.5 mm.

A tank, station No. 8, was moved due west about 1.5 mm and the building it was located on was also extended in a westerly direction.

Building No. 54, station No. 27, was moved in a southwesterly direction about 1.0 mm and centered on the block.

Building No. 37, station 17, was redrafted and centered on the block.

It should be noted that in each of the above instances the feature in error was a triangulation station with an established geographic position. Towers, tanks, buildings, etc., with a geographic position should be located by plotting the position in preference to locating it by radial line intersections on the photo plot or by adjustment between plot points during the detailing.
The railroad yard limits were accurately compiled but some changes were made to the track pattern and track alignment to better represent the actual conditions. The track curves immediately due west of roundhouse No. 132 which were smoothly rounded and evenly spaced were redrawn to show the actual character of the curve. Similarly, the yard due north of roundhouse No. 14 was redrawn to show its characteristic track pattern.

The yard and buildings in the immediate vicinity of triangulation station No. 9 were redrafted. Very minor changes were made to water front areas such as running dock limits parallel to the buildings. Minor corrections were also made to the alignment of streets and buildings.

44. Comparison with Existing Topographic Surveys.

The map manuscript compared favorably with the following topographic quadrangles:

U.S.G.S. Portland, Oreg.-Wash., 1:62,500, 1896,1905,1940
U.S.E. Portland, Oreg.-Wash., 1:62,500, 1939-40

44a. Comparison with Previous Topographic Surveys of this Bureau.

The following topographic surveys fall in the area of the map manuscript:

<table>
<thead>
<tr>
<th>Survey</th>
<th>Scale</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>T-1546</td>
<td>1:10,000</td>
<td>1884</td>
</tr>
<tr>
<td>T-6619a</td>
<td>1:5,000</td>
<td>1938</td>
</tr>
<tr>
<td>T-6619b</td>
<td>1:5,000</td>
<td>1938</td>
</tr>
</tbody>
</table>

The above surveys are reviewed in the Record Sheet for T-8687 with the exception of survey T-1546. Numerous changes have occurred since this latter survey and all previous topographic surveys are now superseded by the map manuscript.

45. Comparison with Nautical Charts.

See Record Sheet for T-8687.

This map manuscript has not been applied to the nautical charts as of the date of this review report.

Review Report of

Planimetric Survey, Manuscript No. T-8688

Paragraphs not used in this review have been adequately covered in other parts of this report.

28. Detailing.-

Detailing of the manuscript was considered good. It was necessary to relocate the position of several streets and to re-ink a large portion of the compilation which had been nearly obliterated by excessive clearing. The Albertina School boundary, not shown by the compiler, was added by the reviewer.

44. Comparisons with Existing Topographic Quadrangles.-

The manuscript compared favorably with the following topographic quadrangles:

45. Comparison with Previous Topographic Surveys of this Bureau.-

None in this area.

Subject: Overlay for map manuscript T-8687

Reference: Memorandum, Horizontal and vertical control on map manuscripts and published maps

In a letter dated 28 March 1946 you were requested not to prepare overlays for any of the map manuscripts in this project. Yet for T-8687 an overlay has been prepared showing all the horizontal control stations not used in controlling this map, although there was adequate room to show all the stations and their reference numbers directly on the manuscript.

If you have shown these horizontal control stations on an overlay thinking that these stations would not be shown on the published map, there is enclosed a copy of a memorandum that I have prepared for the Drafting Section stating our policy in regard to showing control on the published maps for this project.

You will please show all the map information on the map manuscripts in the future and if, as implied in paragraph 7 of the enclosed memorandum, there is a need to make a selection of stations to be shown on the published maps, the selection will be made in the Review Section in this office.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.
Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
