U. S. COAST AND GEODETIC SURVEY
DEPARTMENT OF COMMERCE

DESCRIPTIVE REPORT

Type of Survey: Planimetric Air Photographic

T-8699, T-8700 &

Field No.: Office No.: T-8701

LOCALITY

State: OREGON

General locality: Multnomah & Clackamas Counties

Locality: Tigard, Lake Grove & Oswego, Oregon

1947

CHIEF OF PARTY

R. A. Earle

LIBRARY & ARCHIVES

DATE: December 26, 1947
RECORD SHEET

GENERAL LOCALITY... Washington County, Oregon
LOCALITY... Tigard, Oregon

PHOTOS ORDERED... Aug. 1945... REC'D. 9-24, 26, 1945
PROJECTION ORDERED... Sept. 1945... REC'D. 11-6-1945

CONTROL:
COMPUTED... Bunce... VERIFIED... Harris.
PLOTTED... Foster... VERIFIED... Bunce.

PHOTO PREPARATION:
CONTROL... Harris.
AZIMUTHS... Davidson.

PASS POINTS... Bunce.

TEMPLETS... Bunce... VERIFIED... Harris.

RADIAL PLOT:
Harris
PLOTTED BY... Deal... DATE... 7-12-46
VERIFIED... Harris... DATE... 7-18-46

COMPILE:
DETAIL POINTS... Bushnell... DATE... 7-30-46
DETAIL BY... Davidson... DATE... 10-31-46
VERIFIED BY... Davidson... DATE... 12-20-46

DATE OF PHOTOS... 3484 to 3487, 11-27-45
STAGE OF TIDE... There are no tidal waters within the limits of this map manuscript.

COMPARISON WITH PREVIOUS SURVEYS; TOPO., HYDRO., AND CHARTS:
Due to a scale difference only a visual comparison was made with the USGS Tualatin, Oregon, 15 min. quadrangle, Scale: 1:62500. U.S. Highway 99W has been re-located in several places and a new overpass has been built over the railroad in Tigard, since the quadrangle map was made. Elsewhere the planimetry common to the map manuscript and quadrangle map is in agreement.

REMARKS:
All corrections and additions which were found during the field edit were applied to the map manuscript and a final compilation office review was then made.

FORWARDED TO... Washington Office... DATE... 14, February 1947.

Amendment to File Data

Since project CS-322 was reviewed and registered, it was decided that a Completion Report for each project would be written and filed in the Bureau of Archives. This Completion Report should include all special reports, correspondence of probably future interest or importance, a project layout, a photo index, and a copy of the initial and supplementary project instructions.

A special file has been set up in the library for Division of Photogrammetry projects. The Completion Report and other special reports will be filed under the project number, and these will be arranged in numerical order.

The following reports and records for project CS-322 are now filed in the Bureau Archives, rather than according to the red notes in the Descriptive Reports:

A. Special Reports:
   1. Investigation of Boundary Monuments and Land Lines for Radial Plots 1, 2, 3, and 4
   2. Radial Plots 1, 2, 3, and 4
   3. Legal descriptions of boundaries
   4. Field Inspection for plots 1, 2, 3, and 4

Access No. CS-322 Rep't. 1

B. Computations: Triangulation and Traverse 943/G72 G-6785

C. Field records:
   1. Horizontal Angles (form 250) 12 vol. 943/G8 G-7082
   2. Traverse Measurements (form 590) 9 vol.
   3. Descriptions (form 525) and recoveries (form 526)
   4. Pricking cards (form M-982-1) for tri. and Trav.
   5. Recoverable Topographic stations (form 524)

Access No. 943/GA G-6786

D. Recovery of bench marks (form 685) Filed in Leveling Sec.

E. Supplemental data; maps, plans
   These were transferred to the Map Section (Mr. Stanley, Chief), Division of Charts, to be selectively filed or discarded.

LTS

January 1951
26. Control:

At the time this project was started there were eight horizontal control stations within the area of these three map manuscripts. Seven were recovered and six of these were identified for use in the radial plot. A geodetic party established four new triangulation stations in the area of Map Manuscript T-8699. Three of these were identified for use in the radial plot. In addition a field unit from this office established three temporary control stations and one new triangulation station in the area of Map Manuscript T-8701.

A complete tabulation of the horizontal control stations which were originally in the area of these three map manuscripts is attached to the "Field Inspection Report, Project CS-322, Area of the Third Radial Plot". This report is included with the descriptive report for Map Manuscripts T-8702 and T-8703 which has been forwarded.

27. Radial Plot:

The facts concerning the radial plot for the area of these three map manuscripts have been fully covered in the "Descriptive Report, Third Radial Plot, Project CS-322". This radial plot report was included with the descriptive report for Map Manuscripts T-8702 and T-8703 which has been forwarded.

28. Detailing:

Compilation was done in accordance with instructions for Project CS-322 and special instructions applicable to planimetric mapping.

The high-water line and shoreline features were delineated and detailed from photographs obtained from the office of the U. S. Engineers Corps, Portland, Oregon, and ratio printed at a scale of 1:8000 by the Coast & Geodetic Survey in the Washington Office. In all inland areas the original photography was adequate. The 1:5000 scale contact prints, taken along the shorelines of the Willamette River, were a great help in interpreting detail.

In some cases it was difficult to interpret, from the ratio print, the correct shape and size of buildings. This was attributed to the loss of sharpness when the contact prints were enlarged.
When any item relative to the field inspection data was doubtful, it could be clarified by consultation with the field man who had done the inspection work. It was, therefore, unnecessary to make discrepancy overlays for the field edit work.

The classification symbols for tree or brush areas are placed on the inside of the curled line which denotes the limits of said areas. These curled lines and the letter symbols are in green acid ink.

All boundary and land claim lines are shown by appropriate symbols in red acid ink. A legend shown in the margin of each map manuscript identifies these lines.

Pertinent notes, relative to various items, have been lettered in the margins of the map manuscripts.

29. Supplemental Data:

The following map which is being forwarded with the map manuscripts, was used to supplement the photographs:

\[\text{Blue Print City of Oswego, Oregon Scale: 1" = 200'}.\]

\[\text{Filed with map manuscript T-6701}\]

The following maps or plans which were also used have been forwarded:

\[\text{Multnomah County Assessors Office Sheets Nos. 18 and 30.}\]

\[\text{Map of Clackamas County, Ore. (for reference purposes only).}\]

30. Mean High-Water Line:

There are no high-water lines within the area of Map Manuscripts T-8699 and T-8700. Portions of the Willamette River fall within the area of Map Manuscript T-8701.

All of the high-water line was detailed from information submitted by the field units, which was shown on single lens ratio prints, scale 1:8000. These photographs were taken by the U.S. Engineers at a contact scale of 1:10,000 on 10 August 1944, when the water level of the Willamette River was 3.3 ft. above M.L.W. and on 26 September 1944, when the water level was 1.7 ft. above M.L.W. The field inspector's interpretation of the high-water line was verified by stereoscopic examination of the photographs before detailing was attempted.

The mean high-water line is shown by a continuous heavy-weight black acid ink line at a plane five feet above the Engineers low-water datum which is 1.29 ft. above mean sea level.

There are no marsh areas immediately bordering the high-water line.
31. **Low-Water and Shoal Lines:**

The field inspection unit indicated an indefinite low-water line around three small rock areas, in the Willamette River, which bare at low-water. This low-water line has been shown by a light-weight dotted line which encloses the area and has been appropriately noted. There were no shoal areas indicated by the field inspection unit.

32. **Details Offshore from the Mean High-Water Line:**

Several small rock islands are the only details offshore from the high-water line.

33. **Wharves and Shoreline Structures:**

All piers, wharves, dolphins, piling areas, etc., have been shown. Most of the dolphins and piling areas have been indicated by the field inspection unit on the 1:5000 scale contact prints and cross referenced to the U. S. Engineers photographs.

34. **Landmarks and Aids to Navigation:**

In the area of Map Manuscript T-8701 copies of Form 567 are being submitted recommending the charting of the triangulation station, "STACK, WHITE CONCRETE, 1946", as a nautical landmark.

35. **Hydrographic Control:**

Twenty-two objects were located radially, and one by a sextant fix, for use as temporary hydrographic signals. These were used during the recent hydrographic survey of this part of the Willamette River, by the ship "Westdahl". They are shown on the map manuscript with 2.0 mm black acid ink circles with a short description lettered nearby. This office compiled the shoreline and adjacent detail on Map Manuscript T-8701 in March 1946, and furnished the ship "Westdahl" with black and white prints at a scale of 1:5000.

36. **Landing Fields and Aeronautical Aids:**

There are no landing fields or aeronautical aids within the limits of these three map manuscripts.

37. **Geographic Names:**

Only undisputed geographic names are shown on the map manuscripts. Geographic Names are the subject of the special report, "Investigation of Geographic Names, Project GS-322, Area of the Third Radial Plot", which will be forwarded.

38. **Recoverable Topographic Stations:**

In the area of Map Manuscript T-8699 copies of Forms 524 are being submitted for the following:

PTS No. 18, 1911 (USGS), 1945.
T 1S-23 R 1E Section Corner 3-4-33-34, 1946.
T 23 R 1E Section Corner 9-10-15-16, 1946.

39. Junctions:

Complete and satisfactory junctions have been made between Map Manuscripts T-8699, T-8700 and T-8701, and with adjoining map manuscripts.

40. Bench Marks:

Bench marks have been detailed as identified by the field inspection units. Each bench mark is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 foot lettered nearby.

41. Donation Land Claims and Section Lines:

Donation land claims and section lines were located on ozalid prints of the map manuscripts after the initial compilation had been completed. These lines, with pertinent explanatory notes, were placed on the prints in red and purple ink respectively, by the field party, and were traced on the map manuscripts by the compilers. The ozalid prints containing these lines are being forwarded.

44. Comparison with Existing Topographic Surveys:

See record sheet which accompanies each map manuscript.

45. Comparison with Nautical Charts:

There are no nautical charts of the area of these three map manuscripts.
Approved and forwarded:

R. A. Earle
Chief of Party

Respectfully submitted:
February 5, 1947

J. Edward Deal, Jr.
Photogrammetric Engineer
FIELD EDIT REPORT
T-8699 to T-8701 inclusive
Project CS-322

46. Methods:

These map manuscripts were field edited in accordance with the Field Edit Instructions dated 24 August 1945. All corrections and additions have been made accurately on the field edit prints in colored ink, or the place where a correction or addition is to be made has been indicated by a note which refers to a field photograph. All features which are to be deleted have been crossed out in colored ink.

New buildings were located either by pacing or taping and are shown on the field edit prints. A legend on each of these prints will furnish a key to all the symbols and to the different colored inks used.

47. Adequacy of the Compilation:

The planimetry as delineated on the map manuscripts may be considered as complete and adequate with respect to the corresponding ground detail. Except for the deletions, corrections, additions, and notations made on the field edit prints, it is accurate, also in regard to relative position.

Any omissions, or drafting of detail, that seemed to be questionable was called to the attention of the Compilation Office by notes. Due to extensive construction of new buildings (especially houses), several new roads, and other features, a large amount of cultural detail had to be added in the area of these three sheets. Additional changes and additions are also to be expected in the future because of contemplated construction work. This new cultural detail was located by planimetric methods or field measurements on the field photographs or the original sheet. Several changes and omissions were noted and corrected in drainage. The names and numbers of roads or streets, which were indicated on the prints, were obtained and the spelling verified from official road signs. Other minor changes, omissions, additions, and deletions were noted and corrected.

In T-8701, all offshore and shoreline features were checked. Several additions and corrections were noted. The heights of a few isolated rocks that were omitted during the field inspection were obtained by the field editor. The vertical and horizontal clearance of the railroad bridge over the Willamette River was verified.

In accordance with the field edit instructions, the map manuscripts were examined for completeness and accuracy in regard to geographic names, boundaries, public 'land 'lines, and detail by Mr. W. E. Kidder, a real estate dealer in Tigard and for many years a native of this town (in T-8699); by Mr. W. E. Simonton, Engineer for the Murphy Real Estate Company of Oswego, and for many years a resident of the area (in T-8700); and by Mr. H. G. Richardson, City Surveyor, Portland (in T-8701).
48. **Accuracy Tests:**

The results of the horizontal accuracy test on these map manuscripts are attached to the back of this report.

These maps are believed to comply with the standard map accuracy requirements.

49. **Bench Mark Elevations:**

The elevations of the bench marks shown on the sheets have been checked.

50. **Donation Land Claims and Section Lines:**

Donation land claims and section lines were located on additional ozalid prints of the map manuscripts by a special field party after the initial compilation had been completed. These lines were indicated in red and purple ink, respectively, and supplemented, if necessary, by explanatory notes. These additional ozalid prints will be submitted with the field edit sheets.

HORIZONTAL ACCURACY TEST
Map Manuscripts T-8699, T-8700 & T-8701.
Project CS-322

This test consists of a check traverse between triangulation stations TIGARD, 1946 and IRON MTN, 1946. The traverse is 5.5 statute miles in length; the probable error is one part in 31,900. There are 43 test points available. 24 of the test points fall in T-8699, 18 in T-8700, and 1 in T-8701. In the tabulation, the geographic position from the traverse computation is referred to as T.P.No., and the scaled position from the map manuscripts is referred to as M.M.No. The scale of the map manuscripts is 1:8,000.

Test points No. 5, 7, and 8 were not scaled inasmuch as these points were established at the intersection of a highway and private drives. The less well defined points are 1, 11, 16, 23-3, 30, 32, 34, and 38; the remaining test points are well defined.

All the points were found to test within the standard map accuracy requirements.

Review Report of

Planimetric Map Manuscript T-8699

Subject numbers not used in this report have been adequately covered in other parts of the descriptive report.

Many of the woodland areas and orchards have very regular boundary limits which were not evident on the manuscript. This was particularly true of orchards where definite rectangular areas were shown with rounded corners giving these areas an oval appearance. These areas have been corrected by the reviewer.

41. Donation Land Claims and Section Lines.

The south boundary of the Thomas Stott D.L.C., which extends east to the Willamette Meridian, has been moved north. The distances from this boundary north to the section line and south to the township line are in agreement with the G.L.O. plats. There are no plats or other maps available for the area south of the township line on T-8699.

The portion of the west boundary of the Geo. Richardson D.L.C., which was shown following Ore. Hwy. No. 217, has been moved eastward and now follows the section line.

The north boundary of the David C. Graham D.L.C. has been moved south and the west boundary has been moved in a westerly direction. The new position of the north boundary is in agreement with the G.L.O. plat and is also the same position as shown on the contact prints submitted by the Portland Office.

The west boundary was moved to agree with the measured distance on the G.L.O. plat.

The east boundary of the John L. Hicklin D.L.C. has been drawn parallel to the east line of the small hiatus adjoining it.

Section corner 25-26-35-36 is indicated as a recovered monumented corner in the Special Report on Investigation of Boundary Monuments and Lines, Area of the Third Radial Plot. No recovery card or photo identification was submitted for this corner, therefore,
this corner has been shown in the above report and on
the manuscript as an unrecovered corner.

On the basis of measurements given on the G.L.O.
plats, the section corner has been moved eastward.
This ties it in with the D.L.C. boundaries, and the
data on the adjoining manuscript T-8693.

Section corners 1-2-35-36 and 1-2-11-12 have been
moved eastward and are now in agreement with the G.L.O.
plat.

The section line from corner 26-27-34-35 to
corner 10-11-14-15 has been moved eastward. The original
field location as submitted was in order and the error
in location of the section line occurred in the com-
ilation of the manuscript.

Section corners 2-3-34-35 and 2-3-10-11 have been
moved eastward because of the above change.

All D.L.C. boundaries falling along this section
line have been moved accordingly.

44. Comparison with Existing Topographic Surveys.

Tualatin, Oreg., U.S.G.S., 1:62,500, 1914
" " U.S.E. , 1:62,500, 1938-39

The more recent U.S.E. quadrangle is in good agree-
ment with the map manuscript. Refer to the Record Sheet

45. Comparison with Nautical Charts.

There are no nautical charts or other surveys by
the Bureau in the area of this map manuscript.

Results of the horizontal accuracy test run on
this map manuscript have been verified. It is believed
that this map complies with national standard map
accuracy requirements.

28. Detailing

The numerous Oswego Lake shoreline changes were made to bring it into agreement with the line as established by the field inspection party.

41. Donation Land Claims and Section Lines

Minor adjustments were made to two land claims. Section lines were adjusted to agree with the position they originally occupied on the General Land Office plats.

44. Comparison with Existing Topographic Surveys

The more recent U.S.E. quadrangle is in good agreement with the map manuscript.

45. Comparison with Nautical Charts.

There are no nautical charts or other surveys by the Bureau in the area of this map manuscript.

48. Accuracy Tests

Results of the horizontal accuracy test run on this map manuscript have been verified. It is believed that this map complies with national standard map accuracy requirements.

Reviewed by: Reviewed under direction of:

Photogrammetrist Chief, Review Section

6/17/47
Division of Photogrammetry
Review Report of
Planimetric Map Manuscript T-8701

Subject numbers not used in this report have been adequately covered in other parts of the descriptive report.

28. Detailing

Detail corrections on this map manuscript were confined to the relocation of buildings and dolphins and the clarification of woodland boundaries and classifications.

41. Donation Land Claims and Section Lines

The boundaries of four Donation Land Claims were corrected on the map manuscript. Distances and courses shown on the General Land Office plats were used to make these adjustments.

44. Comparison with Existing Topographic Surveys

Oregon City, Oregon, U.S.G.S., 1:62,500, 1911-12
Oregon City, Oregon, U.S.E., 1:62,500, 1938-39
The more recent U.S.E. quadrangle is in good agreement with the map manuscript.

45. Comparison with Nautical Charts

There are no nautical charts or other surveys by the Bureau in the area of this map manuscript.

48. Accuracy Tests

Results of the horizontal accuracy test on this map manuscript have been verified. It is believed that this map complies with national map accuracy requirements.

TO BE CHARTED \ TO-BE-DELETED { STRIKE OUT ONE

I recommend that the following objects which have (have not) been inspected from seaward to determine their value as landmarks, be charted on (deleted from) the charts indicated.

The positions given have been checked after listing by: [Signature]

R. A. Earle
Chief of Party.

Note: (Unadjusted Field Computation) STACK, White Concrete, 1945.

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and nonfloating aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.

Names underlined in red approved by L. Kerx on 5/4/47
DEPARTMENT OF COMMERCE
U. S. COAST AND GEODETIC SURVEY
c/o Swan Island Postal Station
Portland 18, Oregon

17 June 1947

To: Chief, Division of Photogrammetry
   U. S. Coast & Geodetic Survey
   Washington 25, D. C.

From: Lt. Comdr. R. A. Earle

Subject: Review of Map Manuscript T-3699

Reference: Your Letter, 78-RCR, dated 3 June 1947

The changes in the location of land lines indicated in the above
reference have been verified or disproved by notes on the attached
original print of the map manuscript.

As stated in other review reports, many of these changes are ac-
cepted if they are in agreement with G.I.O., plat data, and if they do
not necessarily disagree with local county maps which are often very
sketchy. By accepting the lines in this manner we are, however, often
throwing out the results of the field investigation which proved, in
many cases, that the G.I.O. plats were wrong. As you know, the pho-
tographs of the field investigation have not been submitted to this of-

cice for further study, however, these are not requested as we would
not have the personnel for a detailed field investigation.

The writer is not at all satisfied, either with our original
field investigation of these lines, or the changes made in Washington
where the tendency seems to be to hold ancient G.I.O., plats as final
and accept the section lines as straight lines. If the pressure
from a backlog of work, at both the District Office and the Photogram-
metric Office, ever subsides, I will attempt to write a detailed re-
port giving instructions on the location of all types of land lines.
This could be used in case our Bureau is ever again involved in a pro-
ject of this type.

DEPARTMENT OF COMMERCE
U.S. COAST AND GEODETIC SURVEY
o/o Swan Island Postal Station
Portland 18, Oregon

2 July 1947

To: Chief, Division of Photogrammetry
U.S. Coast & Geodetic Survey
Washington 25, D.C.

From: Lt. Comdr. R. A. Earle

Subject: Review of Map Manuscript T-8700

Reference: Your Letter, 76-ear, dated 19 June 1947

In reply to the above reference, the records at the courthouses in Multnomah, Clackamas and Washington Counties do not include the names of the following questionable claims:

John Dovee
Pembroke Gault
O. A. Greenes
David Powers

Robert E. Stephanson
J. S. Dickerson
Darius Taylor

Officials at the various county courthouses state that the above claims are either legal subdivisions or homestead claims, of which no permanent record was kept. They should not be shown on the map manuscript.

The claims of Caleb Barnes and Charles W. Bryant were recorded in the Clackamas County Courthouse, however, they were homestead claims and not donation land claims. They should not be shown.

The claim to the east of the Charles Brown D.L.C., is listed in the records of Clackamas County as the Waters Carmen Homestead Claim. It should not be shown on the published map.

Due to changes during the year in water levels in this area, the compiler accepted the field inspector's interpretation of the shoreline of Oswego Lake after verification by use of the stereoscope. Sufficient pass points were then radially plotted, by using the office photographs, to compile this shoreline. These pass points were then pricked on the field photographs on which the shoreline had been identified and the shoreline was then compiled directly from the field photograph. This method should have resulted in an exact duplication of the shoreline as established by the field inspector. In view of the careful office review at the compilation office, by Mr. Barron, it cannot be understood why it was necessary for the reviewer at the Washington Office to make numerous changes in the shoreline of Oswego Lake. This was stated in Paragraph 28 of the Review Report.
In Paragraph 41 of the Review Report, it was stated that section lines were adjusted to agree with the position they originally occupied on the G.L.O. plats. Information is respectfully requested as to whether or not this is the method used. This office has repeatedly called attention to the fact that the G.L.O. plats are very inaccurate and the above method should eliminate all time spent on an actual field verification of these lines.

Changes on this map manuscript were not forwarded for our approval, however, unless we can find something in county records to disprove your changes, we usually accept them. This is done not because we feel the original position was incorrect but because old records are so inadequate that we can not disprove a change without another comprehensive field inspection.

R. A. Earle

To: Chief, Division of Photogrammetry, U.S. Coast & Geodetic Survey, Washington 25, D.C.

Subject: Review of Map Manuscript T-3701.

The suggested changes in the position of land lines in the area of T-3701, which were made by the Washington Office, have been investigated.

It is believed that the field man used information he obtained from property owners and private surveyors when he originally located the land lines on this sheet. As there are no existing surveys or data on file in the Clackamas County Courthouse to substantiate this local information, it is recommended that the G.L.O. plat data, which cannot be disproved without extensive field investigation, be used to locate the lines.

The corrections recommended by the Washington Office were shown in red crayon on an ozalid print of T-3701. In order to bring these lines into better agreement with the G.L.O. plat data, it was necessary to make some slight changes. These are shown in green crayon pencil on the ozalid print. Pertinent notes have also been added giving reasons for the changes.

All changes made in the Washington Office and verified or slightly changed by this office; have been applied to the smooth draft sheet and corrected on the map manuscript.

R. A. Earle, Lt. Comdr., USCGG, Chief of Party

---

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under “Comparison with Charts” in the Review.
