STAGE OF TIDE...

COMPARISON WITH PREVIOUS SURVEYS; TOPO., HYDRO., AND CHARTS:
Due to a scale difference only a visual comparison was made with the U.S.G.S.
Oregon City, Oregon, 15 minute quadrangle, scale, 1:62500. Planimetry which is
common to the map manuscript and quadrangle is in agreement.

REMARKS.
All corrections and additions which were found during the field edit were
applied to the map manuscript and a final compilation office review was then
made.

FORWARDED TO.....Washington Office DATE...10 April 1947

R. A. Earle Chief of Party

FIELD INSPECTION REPORT
T-8706 and T-8707
Project CS-322

1 to 25: All the information that is applicable to these side headings is given in the "Field Inspection Report, Project CS-322, Area of the Third Radial Plot", which was enclosed with the Descriptive Report for Quadrangles T-8702 and T-8703. This Descriptive Report has been submitted.

Approved by: R. A. Earle
Chief of Party

Respectfully submitted:

Charles Hanawich
Topographic Engineer
Amendment to File Data

Since project CS-322 was reviewed and registered, it was decided that a Completion Report for each project would be written and filed in the Bureau of Archives. This Completion Report should include all special reports, correspondence of probable future interest or importance, a project layout, a photo index, and a copy of the initial and supplementary project instructions.

A special file has been set up in the library for Division of Photogrammetry projects. The Completion Report and other special reports will be filed under the project number, and these will be arranged in numerical order.

The following reports and records for project CS-322 are now filed in the Bureau Archives, rather than according to the red notes in the Descriptive Reports:

A. Special Reports:
   1. Investigation of Boundary Monuments and Land Lines for Radial Plots 1, 2, 3, and 4
   2. Radial Plots 1, 2, 3, and 4
   3. Legal descriptions of boundaries
   4. Field Inspection for plots 1, 2, 3, and 4

Access No. CS-322 Kept. 1 2 3 4

B. Computations: Triangulation and Traverse
   943/072 0-6785

C. Field records:
   1. Horizontal Angles (form 250) 12 vol. 943/08 943/09 0-7082 0-7083
   2. Traverse Measurements (form 590) 9 vol.
   3. Descriptions (form 525) and recoveries (form 526) 943/0A 0-6786
   4. Prickling cards (form N-982-1) for tri. and Trav.
   5. Recoverable Topographic stations (form 524) Div. of Photogrammetry
      General File

D. Recovery of bench marks (form 685) Filed in Leveling See:

E. Supplemental data: maps, plans
   These were transferred to the Map Section (Mr. Stanley, Chief), Division of Charts, to be selectively filed or discarded.

LTS

January 1951
26. Control:

At the time this project was started there were seven existing horizontal control stations within the area of the two map manuscripts. All were recovered and six were identified for use in the radial plot.

A geodetic party established seven permanent triangulation stations in this area. Five of these stations were identified for use in the radial plot. Data relative to adjusting an error in the U. S. Engineer traverse south from Oregon City along U. S. Highway No. 99E, is found in the "Descriptive Report Third Radial Plot, Project CS-322", which was attached to the descriptive report for Map Manuscripts T-8702 and T-8703.

As the error in the traverse was not constant it was impossible to adjust the geographic positions of stations, MIX (USE), 1936 (OREG.) and D-14 (USE), 1936. They have been radially plotted as recoverable topographic stations.

A complete tabulation of the horizontal control stations which were originally in the area of these two map manuscripts is attached to the "Field Inspection Report, Project CS-322, Area of the Third Radial Plot". This report is included with the descriptive report for Map Manuscripts T-8702 and T-8703, which has been forwarded.

27. Radial Plot:

The facts concerning the radial plot for the area of these two map manuscripts have been fully covered in the "Descriptive Report, Third Radial Plot, Project CS-322". This radial plot report was included with the descriptive report for Map Manuscripts, T-8702 and T-8703, which has been forwarded.

28. Detailing:

Compilation was done in accordance with instructions for Project CS-322 and special instructions applicable to planimetric mapping.

The high-water line and shoreline features of the Willamette River were delineated and detailed from photographs obtained from the U. S. Engineers at Portland, Oregon, and ratio printed at a scale of 1:8000 by the Coast and Geodetic Survey in the Washington Office. In all inland areas
the original photography was adequate. The 1:5000 scale contact prints, taken along the shorelines of the Willamette River, were a great help in interpreting detail.

In some cases it was difficult to interpret, from the ratio print, the correct shape and size of buildings. This was attributed to the loss of sharpness when the contact prints were enlarged.

When any item relative to the field inspection data was doubtful, it could be clarified by consultation with the field man who had done the inspection work. It was therefore unnecessary to make discrepancy overlays for the field edit work.

The classification symbols for tree or brush areas are placed on the inside of the curled line which denotes the limits of said areas. These curled lines and the letter symbols are in green acid ink.

All boundary and claim lines are shown by appropriate symbols in red acid ink. A legend shown in the margin of each map manuscript identifies these lines.

Pertinent notes, relative to various items, have been lettered in the margins of the map manuscripts.

29. Supplemental Data:

The following map which was used to supplement the photographs has been forwarded:

Black line print - Map of Oregon City, Oregon, Scale: 1" = 600'

30. Mean High-Water Line:

The Willamette River south of Willamette Falls, between Oregon City and Newberg, is not affected by tidal action. This part of the river is a pool in which the water level is controlled by the height of sluice boards placed above the dam at Willamette Falls. The U.S. Engineers usually maintain a water level at an elevation of 51.6 ft. above Mean Sea Level which is the elevation of the first tier of sluice boards. After considerable study the field inspection unit decided to show a highwater line of 52.0 ft. above Mean Sea Level in this part of the river. (A detailed discussion on this subject may be found in paragraph 7 of the "Field Inspection Report, Area of the Third Radial Plot, Project CS-322," which has been forwarded).

There are no marsh areas immediately bordering the high-water line.

The high-water line is shown by a continuous heavy-weight black acid ink line. The approximate water level during the normal spring floods is at the bottom of the bluff which is shown along both shores of the Willamette River and around the several small islands located in the river.
31. **Low-Water and Shoal Lines:**

The field inspection unit did not indicate any low-water lines in the area of these two map manuscripts. The approximate limits of covered rock areas, which are shoal at the water level of 52.0 ft above Mean Sea Level, were indicated by the field inspection unit. These areas have been shown enclosed within a light-weight dashed acid ink line and appropriately noted.

32. **Details Offshore from the High-Water Line:**

Several small rocky islands and several rocks which are at the water level of 52.0 ft above Mean Sea Level are the only details offshore from the high-water line.

33. **Wharves and Shoreline Structures:**

All piers, wharves, dolphins, piling areas, etc., have been shown.

34. **Landmarks and Aids to Navigation:**

In the area of Map Manuscript T-8706 copies of Form 567 are being submitted recommending the charting of the following objects:

- APEX WEST TRANSMISSION TOWER, ROCK ISLAND.
- APEX MID-CHANNEL TRANSMISSION TOWER, ROCK ISLAND.
- Airway Bein, No. 34, Rocks Min.

In the area of Map Manuscript T-8707 copies of Form 567 are being submitted recommending the charting of the following object:

- STANDPIPE (Green), 1946.

35. **Hydrographic Control:**

Seventy-five objects were located radially for use as temporary hydrographic signals. They are indicated on the map manuscripts by 2.0 mm black acid ink circles with a number lettered nearby. This number refers to a description which is listed in the left-hand margin of the map manuscript.

36. **Landing Fields and Aeronautical Aids:**

There are no landing fields within the limits of these two map manuscripts. Form 567 is being submitted for the retention of AIRWAY BEACON #56 as an aeronautical aid.

37. **Geographic Names:**

Only undisputed geographic names are shown on the map manuscript.

Geographic Names are the subject of the special report, "Investigation of Geographic Names, Project CS-322, Area of the Third Radial Plot", which has been forwarded.
38. Recoverable Topographic Stations:

In the area of Map Manuscript T-3706 copies of Form 524 are being submitted for the following:

- MIX (USE), 1946.
- D-14 (USE), 1946.
- ROCK ISLAND UPPER LIGHT STAND, 1946.
- ROCK ISLAND LOWER LIGHT STAND, 1946.
- APEX WEST TRANSMISSION TOWER, 1946.
- APEX MID-CHANNEL TRANSMISSION TOWER, 1946.
- SAWDUST BURNER, (Dornbecher Lumber Mill), 1946.
- Monumented Property Corner on Section Line 4 and 9, T 3S, R 1E, 1947.

In the area of Map Manuscript T-3707 copies of Form 524 are being submitted for the following:

- Cupola ELF, 1946.
- Cupola ABE, 1946.
- STANDPIPE (Green), 1946.
- Township Corner T 2-3S, R 1-2E, 1946.

39. Junctions:

Complete and satisfactory junctions have been made between Map Manuscript T-3706 and T-3707 and with adjoining map manuscripts.

40. Bench Marks:

Bench marks have been detailed as identified by the field inspection units. Each bench mark is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 foot lettered nearby.

41. Donation Land Claims and Section Lines:

Donation land claims and section lines were located on ozalid prints of the map manuscripts after the initial compilation had been completed. These lines, with pertinent explanatory notes, were placed on the prints in red and purple ink respectively, by the field party, and were traced on the map manuscripts by the compilers. The ozalid prints containing these lines are being forwarded.

44. Comparison with Existing Topographic Surveys:

See record sheet which accompanies each map manuscript.

45. Comparison with Nautical Charts:

There are no nautical charts of the area of these two map manuscripts.
Approved and forwarded:

R. A. Earle
Chief of Party

Respectfully submitted:
April 14, 1947

J. Edward Deal Jr.
J. Edward Deal, Jr.,
Photogrammetric Engineer
FIELD EDIT REPORT
T-3706 and T-3707
Project CS-322

46. Methods:

These map manuscripts were field edited in accordance with the Field Edit Instructions dated 24 August 1945. All corrections and additions have been made accurately on the field edit prints in colored ink, or the place where a correction or addition is to be made has been indicated by a note which refers to a field photograph. All features which are to be deleted have been crossed out in colored ink.

New buildings were located either by pacing or taping and are shown on the field edit prints. A legend on each of these prints will furnish a key to all the symbols and to the different colored inks used.

47. Adequacy of the Compilation:

The planimetry as delineated on the map manuscripts may be considered as complete and adequate with respect to the corresponding ground detail. Except for the deletions, corrections, additions, and notations made on the field edit prints, it is also accurate, in regard to relative position.

Any drafting of detail that seemed to be questionable was called to the attention of the Compilation Office by appropriate notes. The numerous buildings which were deleted consisted for the most part of small barns, garages, shacks, and buildings nearing the end of their useful life. New cultural detail was located by planimetric methods or field measurements on the field photographs or ozalid sheets. The names of roads were verified from official signs or other official sources.

All offshore and shoreline features were checked and several corrections were noted. Other minor changes, omissions, additions, and deletions were noted and corrected.

In accordance with the field edit instructions, the map manuscripts were examined for completeness and accuracy in regard to geographic names, boundaries, public and private lines and detail by Mr. Millin, Assistant County Surveyor of Clackamas County at Oregon City, Oregon. The geographic names in this area have been reviewed by Mr. Lewis A. McArthur, Collaborator for the U. S. Coast and Geodetic Survey.

48. Accuracy Tests:

No horizontal accuracy tests were run in this area. For map accuracy tests near the area of these map manuscripts refer to the field edit report for T-8699 to T-3707 inclusive.
49. **Bench Mark Elevations:**

The elevations of the bench marks shown on these sheets have been checked.

50. **Donation Land Claims and Section Lines:**

Donation land claims and section lines have been indicated on the ozalid prints of the map manuscripts by a special field party. These lines have been indicated in red and purple ink, respectively, and supplemented, if necessary by explanatory notes. These prints will be submitted with the field edit sheets.

Since there were few recovered corners located during the initial investigation of land lines in this area, an additional field investigation was made supplemented by the aid of the land lines indicated on the ozalid prints. A summary of the additional information and of the corners found is given below. This information is not listed in the special report on the investigation of boundary monuments and lines in the area of the third radial plot.

T-8706 - Section Corner 34-35-3-2, T 2-3S R 1E
Corner marked by identifiable property lines (intersection of fence line and an old abandoned road). The recovery of this corner was verified by local residents and by Mr. Meldrum, Clackamas County Surveyor. A pricking card has been submitted. The original mark was destroyed and has not been restored.

Monumented Property Corner on Section Line 4-9, T 3S R 1E
This monumented property corner, also serving as a line marker for section line 4-9, was verified by Mr. Meldrum, County Surveyor

T-8707 - Section Corner 13-18-24-19, T 3S R 1-2E
Corner marked by identifiable property lines. The recovery of this corner was verified by local residents and by Mr. Meldrum. A pricking card has been submitted. The original mark was destroyed and has not been restored.

From additional information obtained at Mr. Meldrum's Office it was found that the Bonneville Power Administration had found the stones marking section corners 11-12-13-14, T 3S R 1E and 12-7-13-18, T 3S R 1-2E. A through search was made without success for these two corners, however, the section line joining them, as indicated on the map manuscripts, was checked against the measurements indicated on the Bonneville Power Admin. Plat and found to be in fair agreement. For example, the measurements from the centerline of the power line projected along the ground to the section line was not in error by more than 5 meters.

For additional information refer to our letter dated 9 April 1947, on the subject of mapping land lines.

Chief of Party
Paragraph numbers not used in this report have been adequately covered in other parts of the descriptive report.

The detailed area of this map manuscript follows the irregular pattern indicated on the project layout.

Slight changes in position were made of two of the towers on the Bonneville Power Administration Transmission Line.

41. Donation Land Claims and Section Lines.

Changes made to Donation Land Claim and section lines and claim names, which are to be verified as original claims, have been shown on an ozalid print of the map manuscript. This print is being forwarded to the Portland Office for verification.

44. Comparison with Existing Topographic Surveys.

Oregon City, Ore., U.S.G.S. 1:62,500 1911-12
Oregon City, Ore., U.S.G.S. 1:62,500 1938-39

Planimetry common to the quadrangle maps and the map manuscript is in good agreement.

45. Comparison with Nautical Charts.

There are no nautical charts in the area of this map manuscript.

Review Report of

Planimetric Map Manuscript T-8707

Paragraph numbers not used in this report have been adequately covered in other parts of the descriptive report.

Woodland north of Willamette has been re-delineated.

41. Donation Land Claim and Section Lines.

The Donation Land Claim layout north of the Willamette River has been entirely reconstructed on an ozalid print of the map manuscript. This print is being forwarded to the Portland Office for verification.

44. Comparison with Existing Topographic Surveys.

Comparison has been made with the following quadrangles and all planimetry in common areas is superseded by T-8707:

45. Comparison with Nautical Charts.

There are no nautical charts in the area of this map manuscript.

Names underlined in red approved by L. Mckeen 5/2014.
29 July 1947

To: Chief, Division of Photogrammetry, U.S. Coast & Geodetic Survey, Washington 25, D.C.

Subject: Review of Map Manuscript T-8706

Reference: Your Letter 78-ear dated 18 July 1947

The changes in the position of land lines, as recommended by the Washington Office, are accepted, as the adjustments do not contradict any planimetric detail shown on the map manuscript.

The following donation land claims should be added to the map manuscript:

✓ Heirs at law of Oliver P. and Mary Anne Potts
✓ Nathaniel Bell
✓ Daniel Brock

The limits of these three new claims have been shown on the ozalid print and excerpts from copies of the original deeds have been written on the reverse of said print.

The John S. Kauffman claim, which you questioned, is a homestead claim and should not be shown on the published map.

R. A. Earle,
Lt. Comdr., USCGS,
Chief of Party
To: Chief, Division of Photogrammetry, U.S. Coast & Geodetic Survey, Washington 25, D.C.

Subject: Review of Map Manuscript T-8707.

Reference: Your Letter 78-ea dated 17 July 1947

The changes in the location of land lines, as recommended by the Washington Office, are in agreement with data on file in the court house at Oregon City and with the General Land Office plats. Since the General Land Office plat data cannot be disproved without extensive field investigation, the changes, as shown in purple crayon on the ozalid print, are accepted.

R. A. Earle,
Lt. Comdr., USCGS, Chief of Party
