Shoreline (More than 200 feet to opposite shore): 23

Shoreline (less than 200 feet to opposite shore): 6

Number of Recountable Topographic Stations established: 11

Number of Temporary Hydrographic Stations located by radial plot:

Leveling (to control contours) - miles: 22.9

Roman numerals indicate whether the item is to be entered by
(II) Field Party, (III) Compilation Party, or (VI) the Washington Office.

When entering names of personnel on this record give the surname
and initials, not initials only.

Remarks:
Summary Report to accompany T-07/3

T-07/3 is one of a series of eight quadrangles in Project KH-5(45) which are usually composed of three separate map manuscripts; i.e., one standard 7'/2 quadrangle, scale 1:20,000, and one 5'/2 and 3'/2 shoreline map manuscripts, scale 1:10,000, which are 3 3/4 in latitude and 7'/2 in longitude. T-07/3, however, has only one shoreline manuscript since such a minute portion would have fallen on the 3'/2 that it was combined with the 3'/2. Since there is only one shoreline manuscript, there will be no distinction made between 5'/2 and 3'/2.

The two descriptive reports, one covering the topographic work and the other the shoreline map, have been combined.

The general mapping operations were:

(a) Nine-lens photography and laboratory processing, 1:20,000 scale and 1:10,000 scale.
(b) The field work including identification of shoreline; identification and establishment of horizontal and vertical control, planimetric contouring, classification of photomosaic detail, and topographic names investigation. No shoreline was identified on the 1:20,000 photographs.
(c) Compilation by graphic methods. A reduction of the shoreline compilation which is limited to an onshore zone approximately 200 meters wide was traced directly to the 1:20,000 scale topographic compilation.
(d) Preliminary office inspection.
(e) Field edit.
(f) Final review of the manuscripts to assure completeness and conformity with specifications, and to include corrections in accordance with the field edit survey.
(g) Processing.

T-07/3 will be published and distributed by the Geological Survey at a scale of 1:24,000 as a standard topographic quadrangle in accordance with an agreement of March 25, 1947.

Data pertaining to T-07/3 will be filed and may be obtained as follows:

(a) Filed in the Division of Photogeography

1. Two manuscript sets, T-07/3 scale 1:20,000, T-07/3 scale 1:10,000; field edit and final review corrections applied.
2. Field edit report.
Filed in the Coast and Geodetic Survey archives

1. Combined descriptive report

2. cloth-backed lithographic print of T-3712 at 1:20,000 scale.

3. 1:10,000 scale cloth-backed lithographic print of shoreline map T-3712.

4. Upon T-3712 is published, a cloth-backed copy of the published map, at a scale of 1:20,000, will be registered.
FIELD INSPECTION REPORT

T-8743 (34-37.5/76-45/7.51)

Project Ph 5 (45)

Sub-project B

Riley J. Sipe, Chief of Party

All phases of the field work were done in accordance with The Directors
Instructions, Project Ph-5(45), Field, undated; and Supplement 1 to the
above, dated 11 December 1946, except for deviations noted herein.

The field work on this quadrangle was accomplished by the following
personnel.

1. Description of the Area.

The land area embraced by the quadrangle lies about one mile west of Morehead City, North Carolina and includes a portion of the Bogue Banks as well as the mainland. Bogue Sound splits the quadrangle from east to west.

Only in the extreme eastern portion of the quadrangle does Bogue Banks have any semblance of clear area with the remaining portion of these Banks being very thickly covered with trees and tangled underbrush. The woods and underbrush have grown up covering high sand dunes thus making extremely difficult country to work.

The cleared and populated end of Bogue Banks is a portion of Atlantic Beach, an important summer resort of North Carolina, which is in the process of rapid expansion.
The mainland portion extends westward along Bogue Sound from Morehead City. In general the land is thickly covered with pine, interspersed with low thick brush. Even though the land is relatively high it contains much swampy land.

Along Bogue Sound there are many small farms and numerous summer homes. Here too there is considerable new construction in progress.

The quadrangle is cut by two main roads; U.S. Highway 70 that extends northwest from Morehead City, and Highway-North Carolina # 24 which parallels Bogue Sound. The Atlantic and East Carolina Railroad crosses the quadrangle parallel to U.S. Highway # 70.

2. Completeness of Field Inspection.

It is believed that the field inspection is complete and adequate. As mentioned before there is much new construction in progress along the Bogue Sound and Atlantic Ocean shoreline and field edit must be alert for these added features.

3. Interpretation of the Photographs.

Since photography was of a recent date no difficulty was encountered in the interpretation of the photographic detail.

4. Horizontal Control.

Thirty two horizontal control stations were searched for or recovered; of these nine were identified on the photographs for control of the radial plot.

5. Vertical Control.

Vertical control consisted of the recovery of existing Bench Marks and the establishment of supplemental control by the use of the Wye Level. Eleven Bench Marks were recovered; seven Bench Marks were searched for but not recovered. Form # 685 is submitted on the eighteen marks involved. Forty fly-level elevations were established for contouring by running four level lines over 22.9 miles. The greatest error of closure was 0.6 ft. Adjustments were prorated over the entire line in which they occurred.

6. Contours and Drainage.

Contouring was done on 1:10,000 scale photographs in the Bogue Bank area. On the mainland 1:20,000 scale photographs were used. The prescribed
plantable procedures were employed in contouring this area and in the location of drainage. In the areas of exceptionally dense vegetative growth, particularly on the Bogue Banks, hand level lines were employed for economy.

Also on the Banks, a high narrow ridge parallels the shoreline. For clarity, and the elimination of excessive shift, a 5' contour along the base and 20' or 25' top contours were drawn to show this feature. See review report.

The drainage on the mainland forms a normal pattern and is augmented considerably by numerous drainage ditches in the cultivated sections. These ditches are very narrow and generally two to five feet deep. No attempt was made to contour same since it was felt that by so doing a distortion of the true character of the land would be created.

Drainage on the Bogue Banks is mainly by seepage. There is only one semi-pronounced drain in this section of the quadrangle, running east along the northern limits of the Banks. The remainder of the rainfall, which lies in the many pockets or depressions, is eliminated by seepage.

7. Mean High Water Line.

The mean high water line was inspected by skiff, by walking the shoreline, and by observation from points of vantage. The Atlantic Ocean beach is entirely a solid shoreline while the Bogue Sound shoreline contains both solid and apparent shoreline.

The tide in Bogue Sound is variable and fluctuates with the wind. A small variation in the water level exposes or floods much of the flats on the north side of Bogue Banks. This effect is present on the south shore of the mainland but not in such a great degree.

(The average tide range along Atlantic Beach is about 2.5 feet while the average tide range in Bogue Sound is about 2 feet.)

8. Low Water Line.

In Bogue Sound the low water line was found to be extremely variable from day to day due to the nature of the tide as mentioned above, and no definite low water line was determined. An approximate low water line was determined by observation and sketched on the photograph.

No low water line was determined along the Atlantic Ocean beach due to the roughness of the surf and the stage of the tide at the time of shoreline inspection. See Item 28 Compilation Report.

All wharves and shoreline structures are discernable on the photographs and no other comment is necessary.
10. **Detail Off-shore from Mean High Water Line.**

Detail noted off-shore from mean high water line consisted of spoil banks, a house on piles, and fixed aids to navigation. All these objects were located on the photographs.

11. **Landmarks and Aids to Navigation.**

All existing landmarks have been pricked and labeled on the photographs and their descriptions submitted on Form 567. All fixed aids to navigation were located by pricking directly on the photographs or by graphic triangulation.

12. **Hydrographic Control.**

In accordance with the project instructions the existing horizontal control was supplemented by permanently marked Topographic Stations in order to have horizontal control at not more than one mile intervals. Natural objects were selected in lieu of setting disks wherever possible.

13. **Aeronautical Aids and Landing Fields.**

There is one small airport approximately seven miles northwest of Morehead City on U.S. highway # 70. There are no other landing fields or aeronautical aids within the limits of this quadrangle.

14. **Road Classification.**

All roads have been classified.

15. **Bridges.**

There are no bridges over navigable waters within this quadrangle.

16. **Buildings and Structures.**

Adequately covered on photographs.

17. **Boundaries.**

One boundary is delineated on the photograph, that of the Croatan National Forest. It is located in the northwestern area of this quadrangle. A legal description and detailed information on this boundary is covered in a special report by Mr. A. J. Wraith, Topographic Engineer.

*Div. Photogrammetry by General Foods*
18. Geographic Names.

Geographic Names will be the subject of a special report by Mr. A. J. Wright, Topographic Engineer.

Filed in Geographic Names Section, Div. Charts.

John S. Howell
Topographic Engineer

Robert A. Horn
Photogrammetrist

Approved:

Riley J. Sipe
Chief of Party
26 AND 27. CONTROL AND RADIAL PLOT:

These are the subject of a special report submitted to the Washington Office 20 May 1948 by E.C. Andrews and R.J. Pate. Filed in Div. Photogrammetry General Files.

A minor discrepancy between the Main Radial plot of the 1:10,000 Shoreline Survey and Main Radial plot of the 1:20,000 Topographic Survey is discussed in Main Radial Plot Report No. 6 of Ph-5(45). This report was submitted to the Washington Office 4 August, 1948 by J.M. Slavney.

28. DELINEATION:

Except for a small area of approximately five square miles of inshore area in the northwest corner of the quadrangle, this 1:20,000 scale compilation is a duplication of the Shoreline Survey Map Manuscript. The details were traced directly from a photographic reduction of the 1:10,000 scale compilation.

Details in the area mentioned under combined items 26 and 27 have been corrected on both the 1:10,000 and 1:20,000 manuscripts.

29 TO 36 INCLUSIVE:

Reference Shoreline Survey Compilation Report. (Attached)

37. CONTOURS:

All contours were traced directly from the photographic reduction of the 1:10,000 manuscript except for the western one and a half minutes of the quadrangle. In this area the contours were delineated from the 1:20,000 field photographs.

38. POLITICAL BOUNDARIES:

All political boundaries have been shown on the map manuscript.

39. GEOGRAPHIC NAMES:

Geographic names shown on the name sheets received from the Washington Office have been applied to the map manuscript. (Attached)

44 AND 45 INCLUSIVE:

Approved and Forwarded:

Ross A. Gilmore, Lieut. Comdr.
USCG&GS, Chief of Party.

Respectfully submitted:

FIELD EDIT REPORT
Quadrangle T-8743
34-37.5/76-45.0/07.5
Project Ph-5(43)

E. R. McCarthy, Chief of Party

The field edit of this quadrangle was accomplished during the month of June, 1949, by Elgan T. Jenkins, Cartographer. All work was performed in accordance with Field Edit Instructions, dated 24 August 1945, and Supplement 1, dated 4 February 1946. This report is written in accordance with Instructions in Paragraph 727 - Part II - Topographic Manual. (June 1949)

51. METHODS

All features were checked by visual observation supplemented as necessary by planetable methods.

Changes, except as otherwise noted, were made directly on the field edit sheet. Additions and deletions made on the field edit sheet were by planetable methods or by measurements from topographic features.

Discrepancies, where not settled directly on the field edit sheet, or photographs, are discussed in the body of this report.

A legend describing the symbols and the inks is shown on both the field edit sheet and the photograph.

Two field edit sheets were used; one topographic and one shoreline.

Six photographs show additional information. (#16161-2-3-4, 16228-9). Due to lack of space on the field edit sheet all details could not be cross referenced thereon. These details are shown on the photographs.

52. ADEQUACY OF COMPILATION

The compilation was adequate considering the extent of the field inspection. Most of the corrections shown on the field edit sheet, were the results of natural and artificial changes which occurred subsequent to the date of field inspection. See item 1 of the Field Inspection Report.

Many buildings and piers should have been more clearly delineated by the Field Inspector, while many buildings were overlooked by the compiler.
52. MAP ACCURACY

The horizontal accuracy of the map is adequate. Several planestable traverses were made in locating new details and the closure of these traverses was very good.

No vertical accuracy test was specified for this quadrangle. It is believed to comply with the vertical accuracy specifications. Numerous distributed visual observations indicate that the contour expression is satisfactory.

55. EXAMINATION OF THE PROOF COPY

The copy of the corrected map manuscript was examined for possible errors by Mr. E. W. Copeland, Box 168, Morehead City, N.C. and Mr. Fred Royal, 801 Bridges Street, Morehead City, N. C. Mr. Copeland and Mr. Royal have been residents of this area 65 years, and are well acquainted with the area covered by the map. Neither could find any errors in the corrected copy. For Geographic Names see Supplemental Report attached.

The following items refer to Compilation & Field Inspection Reports.

2. HORIZONTAL CONTROL

Forms 526 are being submitted to reconcile questions concerning the horizontal control.

5. CONTOURS AND DRAINAGE

In 34-44.5/76-49.5, clarification of the many ditches was requested. The main drainage ditches are shown on photograph 16162. The ditches that are not marked are approximately one half a meter in width and depth. These smaller ditches are more or less temporary and should not be shown.

7. SHORELINE AND ALONG SHORE FEATURES

See also Item 28, Compilation Report.

(a) The shoreline was changed on part of the north and south banks of Bogue Sound. This shoreline should be shown as the definite MHWL, rather than apparent. There is a narrow fringe of marsh along this shoreline, but its average width does not exceed four meters.

(b) The approximate MHWL should be deleted in Bogue Sound as a hydrographic examination will be required to determine it with any degree of accuracy.
(c) Numerous new piers have been constructed along the shores of Bogue Sound. Their location and length are shown on the field edit sheet.

8. OFFSHORE FEATURES

In 34-43.2/76-47.7, the "wreck" turned out to be five discarded iron dredging pipes which are awash at MHW.

See item 32, shoreline compilation report.

9. LANDMARKS AND AIDS

During the field edit, day beacon #6 was destroyed. This was reported by the Field Editor to the Coast Guard, but, at the date of submission of T-8743, it had not been rebuilt.

All aids to navigation were checked graphically as to their proper location. With the exception of day beacon #12 and 18, their positions are correct. The planetable cuts are shown on the field edit sheet.

See Item 34, Shoreline Compilation Report.

10. BOUNDARIES, MONUMENTS AND LINES

Camp Glenn was used as a navy base during the last war, but has since been sold to the State of North Carolina. The State sold part of this land to individuals and the balance is now pending sale. The limits of Camp Glenn are indefinite and it is recommended that none be shown.

12. OTHER INFERIOR FEATURES

All roads were classified according to the latest instructions. The classification of these roads are shown on the field edit sheet. U. S. Highway #70 should be classified as Rd. 4 in T-8744 as well as T-8743.

The major swamp within the limits of this quadrangle is HULL Swamp. This swamp was delineated and submitted with the photographs of T-8737.

Copy of Application for a permit showing the proposed location of new submarine cables in sheet T-8744 is submitted. Current information (20 July) from the Carolina Telephone and Telegraph Company is that the application was approved and construction completed on
18 July. The location of the cables is correctly shown on the drawings attached to the application.

Submitted,
14 June 1949

Elgan T. Jenkins
Cartographer

STATISTICS (III)

Land Area (Sq. Statute Miles): 9 (Approx.)

Shoreline (More than 200 meters to opposite shore): 23

Shoreline (Less than 200 meters to opposite shore): 6

Number of Recoverable Topographic Stations established: 11

Number of Temporary Hydrographic Stations located by radial plot: 14

Leveling (to control contours) - miles:

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Remarks:
26 AND 27. CONTROL AND RADIAL PLOT:

These are the subject of a special report submitted to the Washington Office 17 November, 1947 by Milton M. Slavney, Photogrammetric Engineer.

28. DELINEATION:

The delineable area of this shoreline survey falls within the limits of the N. with the exception of a minute portion in the extreme southwest corner along Latitude 34° 41' 15" which has been incorporated with the S.

The field inspection was satisfactory except for the recovery of spoil banks, Mean Low-Water Line and shoal areas which left considerable doubt in the mind of the compiler. Areas of M.L.W. were too broadly designated. Similar areas in other parts of the project heretofore interpreted as shoal areas have been designated as falling within the limits of approximate M.L.W. These areas so labeled have been delineated accordingly and should be called to the special attention of the hydrographic party. Approximate line added to tie in with the new line is shown on the adjoining surveys.

29. SUPPLEMENTAL DATA:

None used.

30. MEAN HIGH-WATER LINE:

The Mean High Water line was delineated according to measured distances or short dashed lines on the field prints shown by the field inspector.

31. LOW-WATER AND SHOAL LINES:

Approximate M.L.W. and shoal areas have been delineated as shown by the field inspector. Reference is hereby made to paragraph 28 of this report for further comment on this subject.

32. DETAILS OFFSHORE FROM THE HIGH-WATER LINE:

Attention is directed to a wreck at Latitude 34° 43' Longitude 76° 47' bearing a label "Wreckage". The field inspector did not recover it as to type of wreck and it is not possible to determine from the photographs whether this wreckage is submerged at all stages of the tide, uncovers or is bare. Further investigation is indicated. See item 28 Field Edit Report.
33. WHARVES AND SHORELINE STRUCTURES:

All wharves or shoreline structures apparent on the photographs or indicated by the field inspector have been delineated.

34. LANDMARKS AND AIDS TO NAVIGATION:

Landmarks and Aids to Navigation have been listed on form 567 and made a part of this report.

The beacons in Bogue Sound, designated by the field party as Hydrographic Stations, were cut in by the field party with plane table cuts; however the field man neglected to indicate the occupied positions on the photographs. This necessitated direct picking of the beacons to the nearest control point on the map manuscript instead of radial point intersection. For this reason they should be considered as having doubtful Geographic Positions and it is recommended that their positions be checked at the time of the 1:20,000 scale topographic quadrangle field edit. **Checked by F.E. See item #9 Field Edit Report**

35. HYDROGRAPHIC CONTROL:

Fourteen (14) hydrographic signal sites (includes beacons mentioned in paragraph 34) were identified by the field inspector and their positions established on the map manuscript by radial intersections.

These stations are as follows:

4301, Black Stack, Eastern of 3, Wallace Fish Factory.
4302, Peak of Summer house on pier.
4303, East gable of Summer house on dock at Seven Gables.
4304, Corner of dock, Moorehead Boys Camp.
4305, Bogue Sound Daybeacon 5-C.
4306, " " " 6 ** Destroyed**
4307, " " " 7
4308, " " " 8
4309, " " " 10
4310, " " " 11
4311, " " " 12
4312, " " " 14
4313, " " " 15
4314, " " " 18

Eleven (11) additional recoverable topographic stations were established for the use of the hydrographer.
36. LANDING FIELDS AND AERONAUTICAL AIDS:

See paragraph 11 of Field Descriptive Report.

37. CONTOURS:

The only contouring done on this manuscript on 1:10,000 scale was on the Bogue Banks. This contouring was discontinued at Longitude 76° 51' leaving 1° minutes of the quadrangle to junction on the west with the 1:20,000 topographic quadrangle. No explanation for this was given in the Field Inspection Report.

38. POLITICAL BOUNDARIES:

As of October 1947 no data on political boundaries have been received in this office.

39. GEOGRAPHIC NAMES:

Geographic names shown on the name sheet received from the Washington Office have been applied to the map manuscript.

44. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES:

None available for comparison.

45. COMPARISON WITH NAUTICAL CHARTS:

A comparison made with Intracoastal Waterway Chart No. 833 (Scale 1:40,000, bearing a print date 12/2/46) indicated very good agreement.

Attention is called to spoil banks along the Intracoastal Waterway Channel of Bogue Sound. The greater portion of these spoil banks was delineated as having a M.L.W.L. as indicated by the field inspection. The nautical charts show these areas with a M.H.W.L. This difference was commented on in paragraph 26 of this report.

Further attention is called to a "Large piece of wreckage", recovered by the field party and delineated accordingly. This detail is located along the shoreline in the extreme southwest corner of the map manuscript and does not appear on the foregoing nautical charts.
Refer to item No. 32 of this report and note that the wreckage mentioned therein is shown on the map manuscript but does not appear on the nautical charts.

Respectfully submitted,

Chief, Review Section

Technical Assistant to the Chief, Div. of Photogrammetry

Shoreline Surveys T-8743

Nov. 20, 1947

1. Refer to paragraphs 4 and 5 of instructions, Ph-5. There will be three sheets on this quadrangle: (a) 1:10,000 scale shoreline sheets T-8743A and T-8743B (these being half quadrangle sheets), and (b) 1:20,000 scale quadrangle manuscript T-8743.

2. 1:20,000 scale film positives of the shoreline sheets 1(a) above will be made immediately and forwarded to Tampa for copying onto the quadrangle manuscript.

3. I suggest that the review of shoreline sheets T-8743 be deferred until the quadrangle is reviewed. Any change made on the shoreline sheets during review should be made in red, and should also be applied to the quadrangle manuscript T-8743. Any items on shoreline sheets T-8743 requiring field edit should be referred to the field at the same time the quadrangle manuscript T-8743 is sent for field edit.

E. G. Jones
Technical Assistant to the Chief, Div. of Photogrammetry

On T-8743 no details are shown

on T-8743 ½. left the manuscript

all details to be compiled at 1:10,000

made as on T-8743 ½ nothing

shown on T-8743 ½

To be checked: no map usage and nothing in Names Report about this name.

Names underlined in red approved, based on Wright's report. Subject to final check by Field Edit.

4/29/49 L. Hack
SUPPLEMENTAL REPORT
GEOGRAPHIC NAMES
PROJECT PH-5 (45)
TO ACCOMPANY FIELD EDIT REPORT
QUADRANGLE T-8743

DESCRIPTICNS ON FORM M 224:

HULL SWAMP vs HULL SWAMP BRANCH: - This is one and the same feature. It is as well known by one as the other. For sake of expediency, the shorter form of the name is recommended.

NAMES IN DISPUTE (FIELD):

DRUM SHOALS - The location of this feature was questioned, but the original location, as shown on the map manuscript, is correct.

HOOP POLE WOODS - The extent of application of this name was in confusion, but the extent as now delineated on the map manuscript is correct.

* HOOP POLE LANDING - This name was in use at the time of the original investigation, as applied to a pier on the Sound side of Bogue Banks, opposite Willis Landing. With the subsequent rotting of the pier landings have recently been made a little over a mile to the east, at the head of HOOP POLE CREEK. The name HOOP POLE LANDING is now applied to that site, and is recommended as such for charting.

NEW NAMES (FIELD):

*HOOP POLE CREEK - This is a well substantiated new name. Recommended.

There is no significant difference between the maps and the project instructions and Bureau policy. There are no discrepancies. They comply with the National Standards of Accuracy.

66. Accuracy of Nautical Surveys: These maps comply with the project instructions and Bureau policy. There are no discrepancies. They comply with the National Standards of Accuracy.

67. Contours: Refer to paragraph 6 of the field inspection report. Contours along the Rogue Banks have been revised by the reviewer, to show the narrow ridge referred to, in a clearer manner. As originally shown the contours were too close together and the manuscript would not have reproduced clearly. Carrying contour was used to represent the 5,10 and 15 foot contours and where necessary the 20 and 25 foot contours.

68. Submarine Cables: Refer to the last paragraph in the field report. This paragraph refers to Submarine Cables on T-874 and should be disregarded.
