STATISTICS (III)

Land Area (Sq. Statute Miles): 6

Shoreline (More than 200 meters to opposite shore): 6½ statute miles.

Shoreline (Less than 200 meters to opposite shore): 40 statute miles
(measured along approximate centerline only.)

Number of Recoverable Topographic Stations established: 3

Number of Temporary Hydrographic Stations located by radial plot: 2

Leveling (to control contours) - miles:

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

FIELD REPORT

MAP MANUSCRIPT, SURVEY NO. T-8781

See field report for Surveys No. T-8756 and T-8759.
RADIAL PLOT REPORT
Project Ph-7 (46)C
Surveys Nos. T-8781 & T-8783

1. The layout of the map manuscripts, horizontal ground control, and photographs are shown on the attached sketch.

PHOTOGRAPHS

2. These were single lens taken with Coast and Geodetic Survey camera No. D contact scale 1:15,000. The radial plot was made at scale of 1:10,000 with ratio prints.

MANUSCRIPTS

3. 1:10,000 scale polyconic projections and New Jersey State Grids (5000 foot intervals) were ruled on the ruling machine and checked in the Washington Office. In making the radial plot base sheets were joined by matching common grid lines. This plot covers the entire area of Surveys Nos. T-8781 and T-8783.

GENERAL DESCRIPTION

4. This plot covers an area along the northeastern shore of Delaware Bay from Ben Davis Point northwestward to Mad Horse Creek.

5. The area of this plot is covered by only one flight of single lens photographs except in the northwestern part of Survey No. T-8783 and the extreme southeastern part of Survey No. T-8781, where the area is covered by two flights of photographs. In addition, one lone photograph was taken near the central part of the area of Survey No. T-8781.

6. The distribution of the horizontal control was inadequate for running the radial plot with single lens photographs.

FIELD INSPECTION

7. The identification of the control was very good with the exception of the identification of substitute station ARNOLD, 1933. However, the field unit was notified of this error and they located a new substitute station which was "held to" in the radial plot.

Respectfully submitted

Harry H. Rudolph
Photogrammetric Engineer
DETAILS OF RADIAL PLOTTING

8. The scale factors for the ratio prints were determined in the Washington Office. The photographs were then ratioed very nearly to exact 1:10,000 scale. The plot was made with celluloid templates in the usual manner.

9. A combined plot was laid for the areas of Surveys Nos. T-8781 and T-8783. The substitute station for triangulation station "ARNOLD 1933" could not be "held to" as identified by the field unit. The compilation office requested the field unit to check the identification of this substitute station or to locate and identify an alternate substitute station for "ARNOLD 1933". The field unit did locate and identify an alternate substitute station. This alternate substitute station was "held to" in the radial plot. Uncontrolled \&\#38;\% templates were adjusted for scale between controlled templates in order to obtain good intersections. Satisfactory results were then obtained by the radial plot.

10. The positions of all photograph centers have been shown on the glossy side of the map manuscripts with 10 millimeter red ink circles accompanied with their respective photograph numbers.

The positions of the pass points have been shown on the glossy side of the map manuscripts with double red ink circles composed of a 3 millimeter circle inscribed within a 5 millimeter circle.

REMARKS

11. An additional flight of photographs, paralleling and overlapping the flight that was taken would have been desirable.

12. A few more identifiable control stations, especially at the southern end of radial plot would also have been desirable.

13. The selection and identification of substitute stations and the identification of the horizontal control stations was very good.

Respectfully submitted
November 6, 1946.

1 FT = 304.8006 METER
COMPUTED BY: J. Steinberg
DATE: 8/29/46
CHECKED BY: L. A. Senasack
DATE: 9/9/46
26. CONTROL:

See radial plot report for layout of control in this area. A list of control on Form No. M-2386-12, is included with this report. Filed in Division Photogrammetry General Files.

27. RADIAL PLOT: Attached

The radial plot is part of a combined plot for Survey Nos. T-8781 and T-8783 made with celluloid templates. The radial plot report was submitted 26 November 1946 to the Washington office.

28. DELINEATION:

The compilation is in accordance with the written instructions pertaining to Project No. PH-746 dated 19 July 1946. Filed in Division Photogrammetry Office Files.

The field unit, in attempting to identify what they described as "apparent shoreline - top of low bluff (marsh line)" identified instead the outer limits of mud and/or vegetation as these features appear on the photographs which were taken at, or very near mean low water. Therefore, it was necessary in the compilation office to delineate the outer limits of marsh visible at high water after stereoscopic examination of the office photographs, using as a guide the nine lens photographs, which were taken near high tide. See review report.

29. SUPPLEMENTAL DATA:

None.

30. MEAN HIGH WATER LINE:

The mean high water line has been delineated in accordance with the office interpretation of the photographs. (See No. 28 above).

31. LOW WATER LINE:

Approximately 10% of the mean low water line was identified by the field unit. No attempt was made in the compilation office to identify the remainder of the mean low water line. MLW line shown by dot-dash line on map manuscript.

31A. SHOAL AND REEF LINES:

None visible on the photographs.
32. DETAILS OFFSHORE FROM THE MEAN HIGH WATER LINE:

No comment.

33. WHARVES AND SHORELINE STRUCTURES:

No comment.

34. LANDMARKS AND AIDS TO NAVIGATION:

See field report.

35. HYDROGRAPHIC CONTROL:

2 hydrographic signal sites.

A descriptive list of the hydrographic signal sites has been compiled and is attached to this report. Two additional copies have been furnished for the use of the hydrographic parties.

36. LANDING FIELDS AND AERONAUTICAL AIDS:

None.

37. GEOGRAPHIC NAMES:

Geographic names were taken from a geographic names investigation furnished by the Washington office. The name "Dunks Bar" has been omitted from the map because it could not be identified on the photographs. A list of the names appearing on the map is attached to this report. List approved by L. Heck, Geographic Names Section, Div. Charts.

38. JUNCTIONS:

The junction with Survey No. T-3756 to the southeast has been made and is in agreement. The junction with Survey No. T-3779 to the northwest will be made when that survey is compiled. There are no other junctions with surveys of the same scale. T-3781 is a part of Surveys No's. T-3756 and T-3759. Junction checked by reviewer.

34. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES:

T-3781 has been compared in detail with the United States Army Engineers, Shiloh, N. J., - Del. Quadrangle, scale 1:62,500 edition of 1941 and found to be in good agreement.

45. COMPARISON WITH NAUTICAL CHARTS:

T-3781 has been compared in detail with Nautical Chart No. 294, scale 1:40,000, published September 1943 (10th edition) (First Edition 1895) corrected to July 13, 1946.

The following topographic information shown on the map is of sufficient importance to warrant immediate application to the chart:

None.
The following topographic details above the plane of mean high water are not shown on this manuscript, but are believed to still exist and should be carried forward on the chart:

None.

Low water features are shown only in part and will be completed by the hydrographic party.

Minor changes in cultural and shoreline details shown on this manuscript need no special discussion.

Respectfully submitted:

Review Report of
Shoreline Map Manuscript T-8781

Subject numbers not used in this report have been adequately covered in other parts of the descriptive report.

28. **Detailing.**—The compilation office had delineated the shoreline on the basis of an office interpretation of the photographs. This shoreline was not in agreement with the shoreline submitted by field inspection.

The shoreline has been redelineated to agree with the apparent shoreline as defined by field inspection. This follows the recommendations of the letter of 30 December 1947 on the subject of shoreline, a copy of which is attached to the descriptive report for the shoreline map manuscript T-8785.

43. **Comparison with Previous Surveys:**

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

Give reasons for deviations, if any, from recommendations made under “Comparison with Charts” in the Review.
