AZIMUTHS: Davidson
PASS POINTS: Harris & Davidson
TEMPELTS: Harris, VERIFIED: Davidson

RADIAL PLOT: Harris
PLOTTED BY: Davidson, DATE: 3-13-47
VERIFIED: Deal, DATE: 3-14-47

COMPILATION:
DETAIL POINTS: H. Lutzen, DATE: 5-2-47
DETAIL BY: Helen Lutzen, DATE: 6-23-47
VERIFIED BY R. H. Barron, DATE: 7-21-47

DATE OF PHOTOS: 8-9-46
TIME OF PHOTOS: Not listed
STAGE OF TIDE: Water level is a gradient between the elevations of the U.S. E. river gages.

COMPARISON WITH PREVIOUS SURVEYS, TOPO, HYDRO, AND CHARTS:
Due to a scale difference, only a visual comparison was made with portions of the USGS Tualatin, Yamhill, McMinnville and Mt. Angel, Oregon 15 min. quadrangles. The planimetry which is common to the map manuscript and quadrangle maps is in good agreement.

REMARKS: Complete planimetric detail along both shores of the Willamette River and within a zone averaging 300 meters in width on each side of the river has been compiled. Inshore from this area only skeleton planimetric details are shown.

FORWARDED TO: Washington Office, DATE: 7-August, 1947

FIELD INSPECTION REPORT
Sheets T-8809, T-8810 & T-8811
Project Ph-13(46)

1 to 25: All information that is applicable to these side headings is given in the "Field Inspection Report, Sheets T-8809, T-8810 and T-8811, Project Ph-13 (46)". This report is included with the "Descriptive Report" for Sheet T-8809.

R. A. Earle
Chief of Party
COMPILATION REPORT
Map Manuscript T-3811
Project Ph-13(46)

26. Control:

Attached to this descriptive report are two sheets of Form M-2388-12 on which is tabulated the horizontal control stations, of all federal agencies, which fall in the area of this map manuscript. A special column headed, "Remarks," has been added to the form, in which a short note has been entered after each station, which gives an explanation of how the station was used in this project.

It will be noted that eight stations were identified by the field unit. These stations were well spaced over the area and were sufficient to control the photographs during the running of the radial plot.

The published positions of the U. S. Engineer stations, which were not searched for by the field unit, have not been shown in the tabulation and these stations have not been plotted on the map manuscript.

Station "VSR (USE), 1941" has been identified and radially plotted as the azimuth mark for station "S 217 GSHD (USE), 1941."

Station "W 99 (USE), 1935-36", has been identified and radially plotted as topographic station "BERG, 1946."

The published elevations, to the nearest 1/10 ft., of all recovered horizontal control stations, which are also used as vertical control, have been shown on the map manuscript.

27. Radial Plot:

This map manuscript is part of Radial Plot No. 1, Project Ph-13(46), which includes the Map Manuscripts No's. T-3809, T-3810 and T-3811.

The facts concerning this radial plot have been fully described in the descriptive report for T-3809.

28. Detailing:

Compilation was done in accordance with instructions for Project Ph-13(46). Special care was taken to see that the requirements of paragraph 34 of the instructions were met.

The transforming printer at the Washington Office was not in proper adjustment at the time the photographs were printed and they could not be oriented in their entirety at the compilation table when radially plotting various types of pass points. Enough pass points had, however, been established during the radial plot so that each chamber of each photograph could be separately oriented. For at least two of the chambers on each photograph, it was found necessary to de-center the photograph radially, to or from
the chamber being oriented, so that the radials to the pass points and horizontal control stations in the chamber would pass through their positions on the map manuscript.

Due to shadows and overhanging trees along the banks of the rivers, it was often impossible to get more than a two radial intersection, on some of the detail pass points which were used to compile the shorelines. These two radial intersection points have been shown with a small circle in green ink on the reverse side of the map manuscript.

The photograph coverage was adequate and very little trouble was encountered in interpreting the planimetric details.

All planimetric features have been compiled, within a zone averaging 300 meters in width, along both shores of the Willamette River. Inshore from this zone only skeleton planimetric details have been shown. The detailing limits of the map manuscript were taken from the index map furnished the compilation office and are shown with a light full line in green acid ink.

This map manuscript is relatively a smooth drawing and all symbols have been drafted to conform with samples furnished the compilation office or with symbols shown on similar planimetric maps which have recently been published by the U. S. Coast & Geodetic Survey.

The heights of bluffs only, were indicated by the field inspector. Their location was interpreted by the compiler with the aid of the stereoscope. Shoreline features and drainage were also delineated by extensive use of the stereoscope, however, it was often necessary to detail the field inspector's interpretation of drainage through thickly wooded areas. This was done only when it was impossible to determine the location of drainage by stereoscopic examination of the photographs.

29. Supplemental Data:

No supplemental data was used in the area of this map manuscript.

30. Mean High-Water Line: (River shoreline at the adopted plane of reference)

A complete discussion of this feature may be found in paragraph 7 of the Field Inspection Report, Sheets 8809, 8810 and 8811, Project Ph-13(46). (T-8104)

The mean high-water line (River shoreline at the adopted plane of reference) is shown by a continuous black acid ink line, .003" in thickness, at the following planes:

North from the gage in Newberg, a pool, 54.5 ft. above M.S.L.

South from the gage at Newberg the water level plane is a gradient between an elevation of 54.1 ft. above M.S.L. for the pool at Newberg and an elevation of 53.3 ft. above M.S.L. for the U.S.E. gage located along the east side of the Willamette River near Ray Bar.

There are no marsh areas immediately bordering the shoreline.
31. **Low-Water and Shoal Lines:**

The field inspection unit did not indicate any low-water or shoal lines within the area of this map manuscript.

32. **Details Offshore from the Mean High-Water Line:**

There are no details offshore from the mean high-water line within the limits of this map manuscript.

33. **Wharves and Shoreline Structures:**

There are no shoreline structures within the limits of this map manuscript.

34. **Landmarks and Aids to Navigation:**

There were no aids to navigation within the area of this map manuscript. Form 567 is being submitted recommending the charting, as nautical landmarks, of the following:

- **WATER TOWER** (Yellow wooden water tower on west bank of Willamette River).
- **TANK** (Spaulding Paper Co. tank at Newberg, Oregon).

35. **Hydrographic Control:**

A complete discussion of this subject can be found in paragraph 12 of the Field Inspection Report, Sheets 8809, 8810 and 8811, Project Ph-13(46). \(T-8809\)

It is believed that the field unit, in an attempt to satisfy the minimum hydrographic control requirements for this project, may have selected a few temporary signals that were of doubtful identity on the photographs or located them by methods which were not too strong. The compiler has radially plotted or otherwise located all of the signals recommended for hydrographic control, by the field unit, for this map manuscript. The compilation office is confident that the signals, which were easily identified on the photographs, are accurately located but, should the hydrographic party encounter some difficulty with a particular signal it should be discarded. In any event, there has been a sufficient number of well located signals established, which may be used by the hydrographic party for establishing additional signals at the time the hydrographic survey is made.

A list of thirty hydrographic signal sites, which fall in the area of this map manuscript, is attached to the Field Inspection Report, Sheets 8809, 8810 and 8811, Project Ph-13(46). \(T-8809\)

36. **Landing Fields and Aeronautical Aids:**

A portion of Sportsman Airport (emergency field) falls along the eastern limits of this map manuscript. There are no aeronautical aids within the limits of this map manuscript.
37. **Geographic Names:**

Geographic names are the subject of a special report, Investigation of Geographic Names, Sheets 8809, 8810 and 8811, Project Ph-13(46) which has been submitted. All undisputed and recommended geographic names have been shown on the map manuscript. **Geographic Names Sheet, Division of Charts.**

38. **Recoverable Topographic Stations:**

Copies of Forms 524 are being submitted for the following: **Photogrammetry Files.**

- **WATER TOWER, 1946**
- **NEWBERG RIVER GAGE, 1947**
- **BERG (BM W 99, 1934), 1946**
- **OPAL (BM X 325-1, USE, 1939), 1947**
  - **GEAR, 1947**
  - **KIND, 1947**
  - **NOON, 1947**
  - **MEET, 1947**
  - **LOST, 1947**

39. **Junctions:**

Complete and satisfactory junctions have been made between Map Manuscripts T-8810 and T-8811 and between Map Manuscripts T-8811 and T-8812.

40. **Bench Marks:**

Bench marks have been detailed as identified by the field inspection units. Each bench mark shown is indicated by a black acid ink cross with the name and elevation to the nearest 1/10 foot lettered nearby.

44. **Comparison with Existing Topographic Surveys—Quadrangle.**

See record sheet which accompanies each map manuscript.

45. **Comparison with Nautical Charts:**

There are no nautical charts of the area.

This form shall be prepared in accordance with 1934 Field Memorandum, "LANDMARKS FOR CHARTS." Positions of charted landmarks and nonfloating aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.
Subject numbers not used in this report have been adequately covered in other parts of the descriptive report.

Corrections made by the reviewer were limited to the shoreline. Inshore planimetry was in good agreement.

Numerous detail points on the manuscript were checked and in all instances the cuts made by the reviewer held within the prescribed limits of accuracy. No new detail points were cut in by the reviewer, as the original detail points were sufficient for compilation. The compiler apparently did not exercise enough judgment in detailing the shoreline as it was relocated at several points. In one instance detail points that were pricked on fast land appeared in the river on the original compilation.

35. Hydrographic Control.

Several hydrographic stations were cut in at random and all held except 1118a, which was moved 0.6 mm to the southwest.

44. Comparison with Existing Topographic Quadrangles.

U.S.E., Yamhill, Ore., 15' quadrangle, 1942, scale 1:62,500
U.S.E., Yamhill, Ore., 15' quadrangle, 1947, scale 1:50,000
U.S.G.S., Mount Angel, Ore., 15' quadrangle, 1921, scale 1:62,500
U.S.E., Mount Angel, Ore., 15' quadrangle, 1947, scale 1:50,000
U.S.G.S., McMinnville, Ore., 15' quadrangle, 1924, scale 1:62,500

U.S.E., McMinnville, Ore., 15' quadrangle, 1947, scale 1:50,000

At approximate latitude 45°15'00" and longitude 123°00'00" the Willamette River does not appear on the quadrangle.
U.S.G.S., Tualatin, Ore., 15' quadrangle, 1914, scale 1:62,500

1. At approximate latitude 45°16'15" and longitude 122°58'45" an underwater cable crossing does not appear on the quadrangle.

2. At approximate latitude 45°16'10" and longitude 122°59'35" an underwater cable crossing does not appear on the quadrangle.

3. At approximate latitude 45°16'10" and longitude 122°59'20" an island does not appear on the quadrangle.

4. The planimetry of the southern half of Ash Island disagrees with the map manuscript.

5. At the southwestern end of Ash Island, three dikes do not appear on the quadrangle.

6. At approximate latitude 45°15'40" and longitude 123°00'00" an overhead cable crossing does not appear on the quadrangle.

U.S.E., Tualatin, Ore., 15' quadrangle, 1947 scale 1:62,500

See all items of above comparison.

45. Comparison with Nautical Charts.

There are no nautical charts in this area.
