STATISTICS (III)

Land Area (Sq. Statute Miles): 28

Shoreline (More than 200 meters to opposite shore): 40 statute miles

Shoreline (Less than 200 meters to opposite shore): 3.5 statute miles

Number of Recoverable Topographic Stations established: 1. SU05 (hydro disk)

Number of Hydrographic Stations located by radial plot: 26

Leveling (to control contours) - miles: none

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Remarks:
Summary to Accompany T-8833

Topographic map T-8833 is one of 24 similar maps in Project CS-319, Alaska Peninsula. It covers the southern part of Kupreanof Peninsula, a southward extension from Alaska Peninsula, and lies between latitude 55° 33' -40' N/Longitude 159° 30' -46' W.

Field inspection included shoreline and offshore data.

Unmarked supplementary horizontal (and vertical) control was established for use in drawing contours on the Reading Stereocartograph at the Washington Office and for shore and offshore detailing at the Baltimore Photogrammetric Office.

Data pertaining to T-8833 is filed as follows:

A. DIVISION OF PHOTOGRAFMETRY GENERAL FILES:

1. Field inspection photographs
2. Acetate Manuscript
3. Duplicate of Descriptive Report
4. One form 524 (recoverable Topographic Station)

B. BUREAU ARCHIVES

1. Registered, original Descriptive Report
2. A cloth-backed lithographic print of the reviewed manuscript at compilation scale.

C. Library and Archives:

Lena T. Stevens
31 October 1949
1. DESCRIPTION OF THE AREA

Survey No. T-8833 is one of twenty-two topographic surveys in Project No. CS-319 located on the Alaska Peninsula. The instructions for this project are dated as follows:

12 March 1943 (CS-279)
29 February 1944 (supplemental) CS-177
27 February 1945
22 March 1945
1 April 1946 (Field supplement No. 1); 30 Dec. 1946 (contour interval)
24 February 1947
9 April, 1947

This survey covers the southern portion of Kupreanof Peninsula from Kupreanof Point to Fox Cape on the east and to a point just north of Fox Bay on the west.

Kupreanof Peninsula is mountainous, with the higher peaks rocky, barren and scarred from erosion. The lower slopes are grass covered with patches of alder. The draws and lines of drainage on the lower slopes have dense growths of alder.

The eastern shore of Kupreanof Peninsula is bold and precipitous, broken only by a small sandy cove 4.5 miles north of Kupreanof Point.

Kupreanof Point, (John Point) is the southeastern end of Kupreanof Peninsula. It appears as a row of rugged, crowded, monoliths graduated downward from the 900 ft. high point of the cape. The south shore of the peninsula between Kupreanof Point and Bluff Point is bold and rugged, broken only by a sand beach bordered cove about midway between the points.

Bluff Point, the southernmost feature on the west side of the peninsula, is a sharp narrow promontory about 700 ft. high. Boulder Bay lies to the north of Bluff Point and just south of Cub Point. Cub Point is a broad-topped rounding headland about 900 ft. high, and has almost perpendicular faces. Fox Bay lying north of Cub Point, is the largest bay of Kupreanof Peninsula. The southeast cove of Fox Bay provides the most protected anchorage in the area and a waterfall in this cove is a source of fresh water.
26. **CONTROL**

See radial plot report for layout of control in this area. A list of stations is furnished in this report on Form No. M-2388-12.

27. **RADIAL PLOT**

Refer to radial plot report for combined radial plot covering Surveys T-8831, T-8832 and T-8833 submitted to the Washington Office on 8 October 1947.

28. **DELINEATION**

Delineation is in accordance with instructions pertaining to Project CS-319.

In several areas where sheer bluffs were found along the shoreline, a definite mean high water line could not be delineated because relief displacement obscured the shoreline on the available photographs.

Due to insufficient photo coverage the contours compiled in the Washington Office on the Reading Plotter are incomplete in various areas on the manuscript.

29. **SUPPLEMENTAL DATA**

None

30. **MEAN HIGH WATER LINE**

The portions of the MHWL identified by field inspection were delineated in accordance therewith; the MHWL not identified by the field party was delineated after careful stereoscopic examination of the photographs.

Also see 28, DELINEATION.

31. **MEAN LOWER LOW WATER LINE**

Only a small portion of the MLLW line in the area of the survey was identified by field inspection. This section of MLLW line, located in a cove on the south shore of Kupreanof Peninsula, about halfway between Kupreanof Point and Bluff Point was delineated on the manuscript.
32. DETAILS OFFSHORE FROM THE MEAN HIGH WATER LINE

Field inspection data was adequate for delineated of details offshore from the mean high water line. Numerous sextant fixes were submitted by the field party to locate offshore reefs, rocks awash, and a breaker. These fixes were plotted and shown with a small blue circle on the back of the manuscript. A one millimeter circle was used in order to distinguish these fixes from radially plotted detail points. * A copy of this data is attached here.*

33. WHARVES AND SHORELINE STRUCTURES

None.

34. LANDMARKS AND AIDS TO NAVIGATION

See Forms 567 attached to Season's Report of the field party (1946).

35. HYDROGRAPHIC CONTROL

Points suitable for photo hydro stations have been selected from objects identified and described on field photographs. A list of these descriptions is attached to this report. Two copies have been furnished for use of the hydrographic party.

36. LANDING FIELDS AND AERONAUTICAL AIDS

None.

37. GEOGRAPHIC NAMES

Geographic names were taken from Nautical Chart No. 8859 and from the United States Coast Pilot-Alaska, Part II-1947. A list of these names is attached to this report.

38. JUNCTIONS

Junction with Survey T-8332 to the north has been made and is in agreement.

No contemporary surveys exist to the east, west, or south of this manuscript. (Water)

39. DIVISION OF WORK

The radial plot and shoreline compilation was completed in the Baltimore Field Office and the contours were compiled in the Washington Office on the Reading Plotter.

200-ft. contours (except 100-ft. contour around shoreline, and portion of odd-numbered contours shown as —— )
40. QUALITY OF CONTOURS

All contours on this sheet conform to the National Standards of accuracy for a contour interval of 200' except the 100' contour above sea level which conforms to the National Standards of accuracy for a contour interval of 100'.

44. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES

None available.

45. COMPARISON WITH NAUTICAL CHARTS

Scale difference makes minute comparison with Chart No. 8859 impractical. From visual comparison however, no considerable changes can be noted.

The following topographic information shown on T-8833 is of sufficient importance to warrant immediate application to the chart:

None.

The following topographic details above the plane of mean high water are not shown on the manuscript, but are believed to still exist and should be carried forward on the chart:

None.

Low water features are shown in part and will be completed by the hydrographic party.

Sextant Fix Data copied from Field Inspection Photographs

A. Kelp Area in Stepovak Bay. Friday 12 July 1946
   Photograph 109U.

Sextant fixes around large reef about 1800 m SW of Mike. Reef is all shoal water. Several rocks appear at low tides. It is believed that these rocks appear at 0-ft. tide. No rocks were visible at the time of the sextant fixes which were taken from a 1-ft. tide to a 2-ft. tide. Area is all heavily covered with kelp and sextant fixes are taken at the edge of same. Numbers on following sketch indicate their approximate position.

1. Fix at edge of kelp. Shoal rock bottom visible all around area. Time: 0857

   Brad     43°14'
   Runt     44°01'
   Hoot     44°04'
   Mike-Runt 123°48'

2. Fix at edge of kelp. Rock bottom visible.
   Time: 0905

   Brad     44°58'
   Runt     46°55'
   Hoot     46°51'
   Mike-Runt 125°55'

3. Fix at edge of kelp. Rock bottom visible.
   Time: 0913

   Brad     41°23'
   Runt     51°13'
   Hoot     51°13'
   Mike-Runt 110°04'

4. Fix at edge of kelp. Bottom not visible
   Time: 0923

   Brad     35°28'
   Runt     54°00'
   Hoot     92°10'
   Mike-Runt 92°10'
5. Fix at edge of kelp. Bottom not visible.
   Time: 0930
   Brad 36°27'
   Runt 50°029'
   Hoot 95°46'
   Mike-Runt 99°021'

   Time: 0937
   Brad 37°17'
   Runt 48°23'
   Hoot 99°021'

7. Fix at edge of kelp. Bottom visible all around area. Time: 0941
   Brad 38°41'
   Runt 46°29'
   Hoot 105°29'

B. Breaker: Kupreanof Point (Photograph 06189)

   Breaker has comb on light swell at 10:30 A.M. Tuesday, 4 June 1946.
   Breaker appears to be in area of about 30 m. in diameter.
   Sextant fix locating breaker. Breaker is in range with object "1" photograph 06189, (center object) and 25 m. inshore of sextant fix.

33 - 07 Object "2" photograph 06189 (= Hy. Sta. 3308)
34 - 40 Object "3" photograph 06189 (= Hy. Sta. 3306)

C. Rocks & Reefs (Photograph 06192)

1. (a) Sextant fix on outer reef on point. Reef is about 10 m. in length (the length extending out from shore), and about 7 m. in width. Reef uncovers 2 ft. at MLW. Sextant fix is on center part of reef.
   Brad 07°20'
   Runt 18°28'
   Hoot 182°28' *

(b) Sextant fix is on reef slightly inshore of (a) above. Reef is about 10 m. in length, (the length extending out from shore), and
about ¼ m. in width. Reef uncovers 1 ft. at MLLW. Sextant fix is on center part of reef.

Brad 07°08'
Runt
Hoot 182°59' *

(c) Sextant fix on rock 1 m. by 2 m. Rock is awash at MLLW.

Brad 07°05'
Runt
Hoot 183°06' *

(d) Sextant fix on rock 1 m. in diameter. Rock is awash at MLLW

Brad 06°56'
Runt
Hoot 183°46' *

(e) Sextant fix on rock 1½ m. by ¼ m. Rock uncovers 2 ft. at MLLW.

Brad 06°48'
Runt
Hoot 183°43' *

* The above large angles consist of two angles taken to a common object

2. (Hydrographic Station 3319)

3. Sextant fix on outer edge of reef. Reef uncovers 1 ft. at MLLW, at position of sextant fix. The reef extends inshore from this point, and is about 10 m. in width at the widest point.

Mike 39°01'
Brad 48°55'
Deck ↓

4. Sextant fix at outer end of reef. Area where fix was taken is covered by 1 ft. of water at MLLW.

Mike 31°55'
Brad
Deck 56°54'

5. (Triangulation Station Pinnacle No. 14)

6. (Hydrographic Station 3320)
7. (a) Sextant fix on rock 6 m. by 4 m. Rock uncovers 2 ft. at MLLW

Mike 09°40'
Brad 09°40'
Deck 49°00'

(b) Sextant fix on rock inshore of (a) above. Rock is 2 m. by 1 m. and uncovers 2 ft. at MLLW

Mike 10°01'
Brad 10°01'
Deck 48°28'

8. Sextant fix at outer end of reef extending off Deck. Area where fix was taken is covered by ½ ft. water at MLLW.

Runt 58°46'
Brad 31°50'
Plug 31°50'

9. Sextant fix on rock 1 m. by 2 m. Rock uncovers 1½ ft. at MLLW.

Runt 51°06'
Brad 51°06'
Plug 49°20'

Names underlined in red are approved. 6-14-39 L. Heck.
26 Control

Peak M, 1946 (El. 1256'): The point on the ridge pricked as the highest point falls about 150' north of the position given for the triangulation station. Both points fall along the axis of the 1200 ft. contour, so that triangulation station "Peak M" may be considered Peak M.

Peak L, 1946 (El. 1055'): The point pricked as the highest point on the mountain falls about 265 ft. northwest of the position given for the triangulation station. The given geographic position for the station lies between the 800 ft. and the 1000 ft. contours at a point somewhat above the probable 900 ft. elevation. A stereoscopic examination of the photographs to check form lines indicates that the contours as drawn are expressive of the topographic conditions, and that no adjustment of the 1000 ft. contour to fit the elevation given for the triangulation station is justified.

The symbol has been deleted from the map manuscript; Geodesy has been notified that the station has been discarded, and the peak has been labeled "Peak L, El. 1055'."

Super, 1946 (El. 16'): The shoreline in the vicinity of this station has been altered to conform to the conditions described on the pricking card and on form 525.

28 Delineation

Form lines (- - - -) were drawn during review from triangulation Super to Fox Cape to fill in the blank left by the Reading Plotter.

42 Comparison with Contemporary Hydrographic Survey

H-7169, 1:80,000, 1946 (rec.), N.A. 1927 Datum. The shoreline from T-8464 (translated to N.A. 1927 datum) forms the base for this survey and is, therefore, subject to the emendations and additions noted under 43 below.

43 Comparison with Previous Topographic Surveys

T-8464, Cape Fox, 1:20,000, January 13, 1943, Polyconic Projections; Unalaska Datum, no field inspection; no field edit.

Only three (1914) triangulation stations were used to control T-8464. By matching T-8833 and T-8464 by means of these three stations, it was possible to make a comparison of shoreline and off-shore detail. No marked differences in the general form of the M.H.W.L. were noted. However, the abundant control along shore for the new survey caused the position of the shoreline to differ as much as 52 m (170') in some areas.
Off-shore detail from T-8833 supplements that of T-8464.

45 Comparison with Nautical Charts

8859 1:30,000 March 1943

Rocks appearing offshore on the chart are also on T-8833. Two sunken rocks and an islet at 55° 38 1/4', 159° 40' (Fox Bay) on the chart are not recorded on T-8833 nor on T-8464. The islet is not visible on the photographs, though a "ledge" area on T-8833 located by seven sextant fixes at 55° 38 1/4', is visible on the photograph.

A ledge with rocks baring 3' M.L.W. is shown on H-7169 in the same position as on T-8833. It seems, therefore, that the chart is in error with respect to this feature. A memorandum regarding this item has been sent to the Nautical Chart Branch.

The chart does not indicate that much of the shoreline is bordered by "foul" areas.

46 Accuracy Tests

No horizontal or vertical accuracy tests were made for this mapped area. Control around the shoreline was abundant so that it is well fixed in position. Interior control fell within their designated contours, with the exception of "Peak L" (see 26 above).

This map manuscript meets the standard of accuracy for charting purposes and for topographic quadrangles for the 200 ft. interval.
