STATISTICS (III)

Land Area (Sq. Statute Miles): \(24\)

Shoreline (More than 200 meters to opposite shore): 8 statute miles

Shoreline (Less than 200 meters to opposite shore): 40 statute miles
Measured along Center line of stream

Number of Recoverable Topographic Stations established: one

Number of Temporary Hydrographic Stations located by radial plot: none

Leveling (to control contours) - miles:

Roman numerals indicate whether the item is to be entered by, (II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Date 7-28-48

Date 17 Sept. 1948
 compilation report

shoreline manuscript survey no. t-8909

this manuscript is one of a series of surveys in project no. ph-14 (46) which covers a narrow strip of land along the gulf intracoastal waterway from houma, la. to corpus christi bay, texas. this project was undertaken to furnish the necessary data to prepare a new series of inland waterway charts at 1:40,000 scale.

Compilation instructions were not furnished for this project.

26. control:

this manuscript was received from the washington office with control plotted thereon. a list of the stations is included in this report on form no. m-2388-12.

TT 69 LS (USGS) 1932 - radially plotted position falls 1.7 mm east of geographic position.

PBM 34 (USED), Sta. 1975+82 (USE), 1934 radially plotted position falls 0.7 mm east of geographic position.

Station 2060+85.64 (USE) radially plotted position falls 0.5 mm southwest of geographic position.

Station Vermilion River Entrance Daybeacon 18 (Vermilion River Entrance Light, 1933) was held with only one cut due to a smoke area on the photographs.

27. radial plot:

the radial plot for this survey was made in the Washington Office. refer to the radial plot reports covering surveys nos. T-8903 through T-8909, and survey no. T-8909 through T-8915, submitted by Roscoe J. French, dated 8 June 1948, and 12 July 1948 respectively.

28. delineation

The compilation is in accordance with photogrammetry instructions no. 17, dated 15 September 1947. Filed in Div. photogrammetry office files.

The shoreline of Vermilion Bay and Vermilion River Canal near the southeast corner of this manuscript could not be delineated due to the lack of photographic coverage.
28. **DELINEATION** (Continued)

For delineation of this map manuscript special ink furnished by the Washington Office was used. However, for thinning this ink, Crafint No. 150 Thinner was used instead of the alcohol thinner. Better results using No. 150 Thinner were obtained.

30. **MEAN HIGH WATER LINE**

The mean tide range in the area covered by this manuscript is about one foot thereby making the MHWL and the MLWL for all practical purposes one and the same.

31. **MEAN LOW WATER LINE**

See Mean High Water Line.

32. **DETAILS OFFSHORE FROM THE MEAN HIGH WATER LINE**

No comment

33. **WHARVES AND SHORELINE STRUCTURES**

No comment

34. **LANDMARKS AND AIDS TO NAVIGATION**

Three day beacons fall within the limits of this survey. The position of one, VERMILION RIVER ENTRANCE DAY BEACON 18, was determined by triangulation in 1933. The positions of the other two, Vermilion River Entrance Daybeacons 17 and 19 were determined by sextant fixes by the field party of 1947.

The positions of two piles near the entrance to Vermilion River were also determined by sextant fixes by the field party of 1947.

See Form No. 567 submitted with field report, Gulf Intracoastal Waterway, L 81 (1947), Vermilion Bay, La. to Port Arthur, Texas, submitted by Ross A. Gilmore, dated October 1947, for the position of these Daybeacons and Piles.

One landmark, DERRICK, shown on Chart No. 1277 between Intracoastal City and Vermilion Lock, has been destroyed and should be deleted from Chart No. 1277.

See section of Chart No. 1277 submitted as a part of field report, Gulf Intracoastal Waterway, L 81 (1947).

35. **HYDROGRAPHIC CONTROL**

None.

36. **LANDING FIELDS AND AERONAUTICAL AIDS**

None
37. JUNCTIONS

This survey is bounded by the project limits to the north and south. Junction was made with Survey No. T-8910 to the west and is in agreement. Junction was made with Survey No. T-8908 to the east and is in agreement except for one area near Lat. 29° 49'. Survey No. T-3908, which is now in the Washington Office, should be corrected in the above mentioned area to the delineation shown on this manuscript. Done.

38. GEOGRAPHIC NAMES:

The geographic names were taken from U.S.G.S. Abbeville, La. quadrangles (SE quarter) and (SW quarter) scale 1:31,680, edition of 1932. No final names standard was furnished for this area. See list attached.

44. COMPARISON WITH EXISTING TOPOGRAPHIC QUADRANGLES

This survey was compared with U. S. Geological Survey Abbeville, La. quadrangles (SE) and (SW) scale 1:31,680, edated 1932. Quite a few changes were found to exist, the majority of which are:

1. Graphes Island has diminished in size.
2. The area between Intracoastal City and Vermilion Lock has a road and bridge, and more spoil.
3. Vermilion Canal has been cut through.

45. COMPARISON WITH NAUTICAL CHARTS:

Due to the great difference in scale between this survey (scale 1:10,000) and nautical charts Nos. 1051 and 1116 (scale 1:175,000 and 1:4,580,000 respectively) a minute comparison could not be made. A general comparison was made with Chart No. 1277, scale 1:80,000, published November 1938; corrected to 22 December 1947.

The following topographic information shown on T-8909 is of sufficient importance to warrant immediate application to the chart:

None.

The following topographic details above the plane of MHW are not shown on this manuscript, but are believed to still exist and should be carried forward on the chart:

Shell Island in Vermilion Bay near entrance to Vermilion River.

Minor difference in cultural and shoreline details need no special discussion.
Respectfully submitted:

Comparison with Existing Topographic Quadrangles

Quadrangles
U.S.G.S. Abbeville S.E. La. 1:31,680 1932
U.S.G.S. Abbeville S.W. La. 1:31,680 1932

Topographic Surveys
T-6177 1:20,000 1934
This map supersedes T-6177 for nautical charting purposes.
There are no contemporary hydrographic surveys in the area covered by the map manuscript.

Comparison with Nautical Charts

1277 1:80,000 1938-1947
There are no significant differences between T-8909 and the chart.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
