U. S. COAST AND GEODETIC SURVEY
DEPARTMENT OF COMMERCE

DESCRIPTIVE REPORT

Type of Survey: TOPOGRAPHIC
Field No.: Ph-20(4?) Office No.: T-8990

LOCALITY
State: NORTH CAROLINA
General locality: PAMLICO RIVER
Locality: LOWLAND

CHIEF OF PARTY
E.R. McCarthy, Chief of Field Party.
A.L. Wardwell, Tampa Photogrammetric Office

LIBRARY & ARCHIVES
DATE: August 14, 1953
DATA RECORD

T-8990

Project No. (II): Ph-20(47)  Quadrangle Name (IV): LOWLAND, N.C.

Photogrammetric Office (III): Tampa, Florida  Officer-in-Charge: Arthur L. Wardwell

Instructions dated (II) (III): 23 July 1943  Copy filed in Division of

Method of Compilation (III): Graphic  Photogrammetry (IV):

Manuscript Scale (III): 1:20,000  Office Files

Stereoscopic Plotting Instrument Scale (III): Inapplicable

Scale Factor (III): None

Date received in Washington Office (IV): 17 Oct 1950  Date reported to Nautical Chart Branch (IV):

Applied to Chart No.  Date:  Date registered (IV): 12 Jan 1953

Publication Scale (IV): 1:24,000

Geographic Datum (III): N.A. 1927'

Vertical Datum (III):

Reference Station (III): WATSON, 1935

Lat: 35° 17' 52.223" (1609.4m) Long: 76° 31' 59.329" (1513.2m)

Plane Coordinates (IV):

x = 2,721,022.09 Feet

y = 571,086.23 Feet

Elevations shown as (25) refer to mean high water
Elevations shown as (5) refer to sounding datum
i.e., mean low water

Mean sea level except as follows:

Roman numerals indicate whether the item is to be entered by (II) Field Party, (III) Photogrammetric Office,
or (IV) Washington Office.

When entering names of personnel on this record give the surname and initials, not initials only.
All contouring done by:
Herschel G. Murphy
Engineering Aid

Areas contoured by various personnel
(Show name within area)
(II) (III)
DATA RECORD

Field Inspection by (II): Herschel G. Murphy, Engr. Aid
Date: 12/10/48 to 1/20/49

Planetary contouring by (II): Herschel G. Murphy, Engr. Aid
Date: 12/10/48 to 1/20/49

Completion Surveys by (II): J. E. Hundley
Date: Nov. 12/4/50

Mean High Water Location (III) (State date and method of location):
Air Photo Compilation 26 Jan. 1948

Date: 18 June 1948

Date: 18 June 1948

Control plotted by (III): R. R. Wagner
Date: 5 Oct. 1948

Control checked by (III): B. F. Lampton
Date: 6 Oct. 1948

Radial Plot or Stereoscopic Control Extension by (III):
M. M. Slavney
Date: 25 Nov. 1949

Stereoscopic Instrument compilation (III):

Planimetry inapplicable
Contours inapplicable

Manuscript delineated by (II): R. A. Reece
Date: 18 Jan. 1950

Photogrammetric Office Review by (III): J. A. Giles
Date: 16 March 1950

Elevations on Manuscript checked by (II) (III):

**Remarks:**
Summary to Accompany T-8990

Topographic map T-8990 is one of a series of 32 maps, graphically compiled, in Project Ph-20(47). The field operations included complete field inspection and plane-table contouring on 1:20,000 scale nine-lens photos. A manuscript was graphically compiled and completely field edited.

This map is to be published by the U. S. Geological Survey at a scale of 1:24,000 as a standard 7 1/2 minute quadrangle. The registered copies under T-8990 will include the original descriptive report, a cloth-mounted print of the manuscript at a scale of 1:20,000 and a cloth-mounted print of the published map at a scale of 1:24,000.

Quadrangle T-8990
(35° 15' 00" N 76° 30' 00")
Project Ph-20(47)

E. R. McCarthy, Chief of Party

The field work for this quadrangle was done in accordance with the Director's Instructions, Project Ph-20(47), field, dated 23 July 1948 and other instructions as noted herein. The field work was accomplished by the following personnel.

1. DESCRIPTION OF AREA

This quadrangle is located in Pamlico and Beaufort counties, North Carolina, with only a small portion of the western part of the quadrangle in Beaufort County.

Goose Creek lies along the western quadrangle limit running generally North and South.

The Intracoastal Waterway runs in a general northwest-southeast direction from the south end of Goose Creek to Jones Bay in the southwestern part of the quadrangle.

The Pamlico River flows in a general east-west direction along the northern part of the quadrangle.

There is one hard surfaced highway (no route number) running generally north-south and curving to the west. This highway terminates on the east shore of Goose Creek. N.C. 33 also runs thru quadrangle.

There is one village in the quadrangle, namely Lowland, N.C. It is small and scattered, with no definite boundaries.

There are no industrialized areas within the quadrangle limits, although a small amount of fishing and lumbering is carried on.
The area within the quadrangle limits is comprised for the most part of heavily wooded lowland and marsh, with a number of small farms scattered throughout the area. The trees in the wooded area are mostly pine with small stands of cypress and gum.

2. COMPLETENESS OF THE FIELD INSPECTION

Field inspection of the quadrangle is thought to be complete and all features are adequately classified and identified on the photographs.

Woodland cover was classified in accordance with Photogrammetry Instructions No. 21 dated 18 August 1948.

3. INTERPRETATION OF THE PHOTOGRAPHS

No great difficulty was encountered in topographic interpretation of photographic details.

4. HORIZONTAL CONTROL

All known horizontal control was searched for within the quadrangle and a report for each triangulation station submitted on Form 526.

No supplemental control was established during field inspection.

5. VERTICAL CONTROL

Two miles of a third order level line were run through the quadrangle and two bench marks established.

Nine and one half miles of fly levels were run to establish additional control for planetable contouring. All existing bench marks were searched for.

6. CONTOURS AND DRAINAGE

Contouring was done by planetable methods directly on 1:20,000 scale nine lens photographs at an interval of five feet.

Elevations range from sea level to eight feet.

The swamps in the quadrangle do not have any definite pattern of drainage.

7. MEAN HIGH-WATER LINE

The mean high-water line is as photographed. In some cases it was determined by measurements and in others by trees along the shoreline.

8. LOW-WATER LINE

The mean low water line is the same as mean high-water line because there is no periodic tide.
9. WHARVES AND SHORELINE STRUCTURES

Adequately covered by the photographs.

10. DETAILS OFFSHORE FROM HIGH-WATER LINE

Wrecks are the only objects offshore and they show clearly and are labeled on the photographs.

11. LANDMARKS AND AIDS TO NAVIGATION

All fixed aids were located by theodolite and are submitted on forms 567 and 24A. There are no landmarks in this quadrangle. See Figure 1.

12. HYDROGRAPHIC CONTROL

At no place along the shore does the interval between triangulation stations, daybeacons, lights and topographic stations exceed 2.0 miles.

13. LANDING FIELDS AND AERONAUTICAL AIDS

There are no landing fields or aeronautical aids in the area encompassed by the limits of this quadrangle.

14. ROAD CLASSIFICATION

All roads were classified in accordance with Photogrammetry Instructions No. 10 dated 14 April 1947 and amendment thereto dated 24 October 1947. It was noted during the course of field inspection that the Campbell's Creek Road, linking Aurora and Hobucken, N.C., was being improved. When it is complete, the classification of the road probably should be changed. Classified Rd. 4 by Field Edit.

15. BRIDGES

There are no bridges over navigable waters in this quadrangle.

16. BUILDINGS AND STRUCTURES

The field inspection of buildings and structures was completed in accordance with Photogrammetry Instructions No. 29, dated 1 October 1948.

New buildings and structures erected since photography were located directly on the nine lens photographs by (1) planimetric methods, (2) measurements from identifiable points of detail.

17. BOUNDARY MONUMENTS AND LINES

A United States Coast Guard Depot is located on the west bank of the Intracoastal Waterway at Hobucken, N.C. The boundary monuments of this depot have been destroyed, but the limits of the depot were outlined on the
photograph from information obtained from the Commanding Officer.

A portion of the Goose Creek Refuge is located within this quadrangle. All boundary monuments on the line of the refuge were searched for but only four could be found. These were located on the photographs by photo points. (See Boundary Report by Mr. Wilber R. Nelson) Filed in Bureau Photo.

18. GEOGRAPHIC NAMES

This will be the subject of a special report by Mr. Wilber H. Nelson, the report being forwarded to the Washington office on 14 February 1949. Filed in Geographic Names Section, Div. Charts.

PHOTOGRAHAMETRIC PLOT REPORT

This report was submitted to the Washington Office with Descriptive Report T-8996, and filed as part of report.

31. **DELINEATION**

The manuscript was delineated by the graphic method.

Field inspection was adequate.

Photographs were clear but of only fair scale.

Discrepancies observed during compilation have been noted on the discrepancy overlay for the completion survey.

32. **CONTROL**

Adequate control was provided. Identification was positive and density and placement were good.

33. **SUPPLEMENTAL DATA**

None available.

34. **CONTOURS AND DRAINAGE**

No difficulties were encountered in compiling contours and drainage.

35. **SHORELINE AND ALONGSHORE DETAILS**

No difficulty was encountered in the delineation of these features since the detail was clearly visible on the photographs and shoreline inspection was good. None of the shallow areas alongshore are a danger to navigation and none have been shown.

36. **OFFSHORE DETAILS**

No unusual problems were encountered.

37. **LANDMARKS AND AIDS**

Theodolite cuts used to establish positions of aids to navigation checked out in every case with the exception of GOOSE CREEK LT. 1, which did not check the radial plot position of this light by 10 meters. Both the radial plot and theodolite cuts give good intersections for this light which makes it difficult to reconcile the fact that GOOSE RM 2, 1932, used as an instrument station, plots 26 meters offshore, whereas, form 526 states a broken tile, presumably RM 2, is 3.3 meters inshore.
37. **LANDMARKS AND AIDS (Continued)**

The position of **GOOSE CREEK LT. 1** shown on the manuscript is by the radial plate. This position should be checked by the field editor.

*Has been checked by field editor. See Form 567 following Field Edit Report.*

38. **CONTROL FOR FUTURE SURVEYS**

Five (5) forms 524 are being submitted herewith.

A list of these stations has been prepared and is included under Item 49.

39. **JUNCTIONS**

This quadrangle joins T-8981 to the north, T-8989 to the west, T-8996 to the south and T-8991 to the east.

Junctions are in agreement.

40. **HORIZONTAL AND VERTICAL ACCURACY**

No statement necessary.

41. **BOUNDARIES**

County and Township lines were delineated according to the field edit data submitted by Cecil A. Navin, May 1950.

The U. S. Coast Guard Depot mentioned under Item 17 falls on T-8996.

46. **COMPARISON WITH EXISTING MAPS**

There are no topographic quadrangles of the area available for comparison.

Comparison was made with U.S.C.& G.S. Planimetric Maps T-5557 to T-5560 inclusive. Portions of each map embraced a segment of the area covered by the map manuscript. These planimetric maps are at a 1:10,000 scale, compiled from aerial photographs taken October 1934. No significant changes have taken place.
47. COMPARISON WITH NAUTICAL CHARTS

Comparison was made with U S C & G S Charts 843 and 1231. Chart 1231 scale 1:80,000 was published in November 1938 and corrected to 23 December 1949. Intracoastal Waterway Chart 832, scale 1:40,000, was published January 1938 and corrected to 26 December 1949.

The planimetric maps listed in Item 46 were the source of most of the planimetry on the nautical charts. The same differences apply.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

FIELD COMPLETION ADDITIONS AND CORRECTIONS TO THE MANUSCRIPT

42. Additions and corrections furnished by the field completion survey have been applied to the manuscript. The manuscript is now complete except as noted under item 43.

43. Remarks:

Signature of Compiler
Signature of Supervisor
FIELD EDIT REPORT
Project Ph-20(47)
Quadrangle T-6990

51. METHODS

The field edit of this quadrangle was accomplished by traversing, via truck, all roads, and walking to other areas in which the reviewer requested information, or for a general check on the adequacy of the map compilation. The shoreline was inspected from a skiff.

Corrections and additions were made with standard survey instruments in conjunction with visual inspection.

Corrections and additions have been noted on the field edit sheet and field photographs, numbered 21629, 24132 and 24133. All work shown on the photographs is properly referenced on the discrepancy print. All deletions have been noted on the field edit sheet.

The reviewer's questions are answered on the discrepancy print, field edit sheet, or photographs.

A legend appears on the field edit sheet indicating the different colored inks used for the various additions, corrections and deletions.

The field edit was made in November, 1950.

52. ADEQUACY OF COMPILATION

The map compilation, in general, is adequate and will be complete after field edit data has been applied.

53. MAP ACCURACY

In general, the accuracy of the map is good.

54. RECOMMENDATIONS

None.

55. EXAMINATION OF PROOF COPY

It is believed that Mr. R. C. Holton, land surveyor, of Olymbia, N. C., is best qualified to examine a proof copy of this work.
56. WHARVES AND SHORELINE STRUCTURES

Refer to Item 9 - Field Inspection Report.

Additional wharves and shoreline structures have been indicated on the field edit sheet and photograph 24133.

57. DETAILS OFFSHORE FROM HIGH-WATER LINE

Refer to Item 10 - Field Inspection Report.

Additional offshore details has been indicated on the field edit sheet.

58. MEAN HIGH-WATER LINE

Refer to Item 7 - Field Inspection Report.

The shoreline along the north bank of Beards Island is building up with sand and has been indicated on the field edit sheet.

59. AIDS TO NAVIGATION

Refer to Item 11 - Field Inspection Report.

Two additional aids to navigation have been indicated on the field edit sheet, namely, Oyster Creek Entrance Light #2, and a pile which carries a sign lettered "INTRACOASTAL WATERWAY".

The position of one aid, Goose Creek Light #1, was checked as requested by the Tampa Photogrammetric Office.

Data for the location of the position of all these aids are being submitted on Form 34A. Div. of Photogrammetry general files.

All aids shown on Charts 832 and 1231, for this area, are in existence.

60. BOUNDARY LINES

The boundary line between Beaufort and Pamlico Counties in the extreme southwest portion of this quadrangle was taken from a map of Pamlico County, prepared by the North Carolina State Highway and Public Works Commission, dated 1944.

According to Mr. R. C. Holton, Olympia, N. C., Pamlico County surveyor, and Mr. G. G. Brinson, Reelsboro, N.C., former County Attorney of Pamlico County, this part of the Beaufort-Pamlico County Line has never been surveyed.
Mr. Holton started a survey of this line from a point on N. C. Highway #306 north of Grantsboro, ran about two miles east and stopped. Reasons for not completing the survey are too numerous and complicated to note.

However, these two gentlemen stated that the line as indicated on the above-mentioned map is probably correct.

61. JUNCTIONS

A satisfactory junction has been made with Quadrangles T-8991 on the east and T-8999 on the west.

Junction with Quadrangle T-8996 will have to be checked in the Washington Office. Done.

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and nonfloating aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.
I recommend that the following objects which have been inspected from seaward to determine their value as landmarks be charted on the charts indicated.

The positions given have been checked after listing by

REVIEW REPORT T-8990
Topographic Map Manuscript
8 May 1951

62. Comparison with Registered Topo. Surveys:

For the areas in common, this survey supersedes;

T-1213 (1870)  1:20,000  T-5558 (1935)  1:10,000
T-1095 (1869)  "  T-5559 (" )  "
T-5557 (1935)  1:10,000  T-5560 (" )  "

for nautical charting purposes.

63. Comparison with maps of other agencies:

None

64. Comparison with Contemporary Hydro. Surveys:

None

65. Comparison with Nautical Charts:

No. 832  9/22/47  1:40,000 and
No. 1231  2/20/50  1:80,000

The cable area crossing Goose Creek and the foul areas north of Clark Point are not shown on these charts. This survey should be applied to these charts when they are reconstructed. Changes and additions made during review are shown in red ink on the manuscript.

66. Foul Area:

The foul area north of Clark Point may not be as large as is shown on the manuscript. It was indicated with leaders by the Field Edit Party but was not outlined in any way. The limits were estimated by the reviewer.

67. Aids and Landmarks:

Aids are listed on Form 567 and filed as Chart Letter No. 118 (1950) in the Division of Charts. See copies following Field Edit Report.

68. Adequacy of Results:

This map complies with National Map Accuracy Standards.
69. **Overlay, etc.:**

An overlay has been prepared showing road classifications, control, etc. A list of control names as they are to be shown on the published map has also been prepared. This map will be edited and published by the U. S. Geological Survey. *Div of Photogrammetry files.

HISTORY OF HYDROGRAPHIC INFORMATION

T-8990, NORTH CAROLINA

Hydrography was applied to the map manuscript in accordance with the general specifications of 18 May 1949.

The depth curves and soundings are in feet at Mean Low Water and originate with the following surveys and charts:

Hydrographic Survey
- H 5876 (1935) 1:10,000
- H 5874 (1935) 1:10,000
- H 5919 (1935) 1:10,000
- H 1088 (1870) 1:20,000

Nautical Chart
- 1231 (1938) 1:80,000 Corr. to 1950
- 832 (1938) 1:40,000 1949

The depth curves are shown at 6, 12 and 18 feet. Hydrography was compiled by C. Theurer and checked by R. K. DeLawder.
