Form T-Page 4
SUMMARY TO ACCOMPANY MAP T-8994

Topographic map T-8994 is one of 32 similar maps of Project Ph-20(47). It covers a portion of Pamlico Sound and some land area adjacent.

Project Ph-20(47) is a graphic compilation project. Operations preceding compilation included complete field inspection, the recovery and identification of horizontal control, and topography by planarable methods.

Map T-8994 was compiled at a scale of 1:20,000 and covers 7½' in latitude by 7½' in longitude. After the addition of hydrographic data by the Nautical Chart Branch, the map will be published by the Geological Survey as a standard topographic quadrangle.

Items registered under T-8994 will include a cloth-mounted lithographic print of the map manuscript at a scale of 1:20,000, a cloth-mounted color print at a scale of 1:24,000 and the descriptive report.
FIELD INSPECTION REPORT
Quadrangle T-8994
35-15/76-00/7.5
Project Ph-20 (47)

E. R. McCarthy, Chief of Party

The field work for this quadrangle was done in accordance with the Director's Instructions, Project Ph-20, (47), Field, dated 23 July, 1948, and other instructions as noted herein. The field work was accomplished by:

<table>

Horizontal control
Recovery, Shoreline May 23, 1949
and Field Inspection

This report is written in accordance with Chapter 7, Paragraph 724 of the preliminary edition of the Topographic Manual dated June, 1949.

2. AREAL FIELD INSPECTION

The quadrangle is uninhabited and is accessible only by boat from Pamlico Sound or from Route 264 by the Outfall Canal. The land mass consists of 3 square miles, of which about one third is marsh and the remainder very flat wooded land which is usually flooded in winter.

The most prominent cultural feature is the southern terminus of the Outfall Canal, which was dredged to drain Mattamuskeet Lake for farming. This project was abandoned and the canal is now used by fishermen for access to Pamlico Sound, and by the Wildlife Service to control the water level of Mattamuskeet Lake.

The quality of the photographs was satisfactory. No difficulty was encountered in interpretation.

The field inspection is believed to be complete.

3. HORIZONTAL CONTROL

The only station, HOG ISLAND SHOAL BN, 1933, in the quadrangle was recovered and identified.

4. VERTICAL CONTROL

(a). Inapplicable.
(b). No fly levels were run as the water level was used to control the elevations. A check was made at the New Holland bridge over the Outfall Canal each morning and night to determine the average water level for each working day.

(c)- (d). Inapplicable.

5. CONTOURS AND DRAINAGE

Elevations were determined by planetary supplemented by hand level lines using the water levels of the canals as described in paragraph 4 (b) as a datum.

Horizontal locations of level points were shown directly on nine-lens photographs, using identifiable features for control.

No contours are in the quadrangle, the highest ground elevation being 2 feet. Spoil banks of the Outfall Canal are 4 to 9 feet high.

The drainage pattern is not well defined. None of the small creeks making north into the marsh from the Sound enter the woods except as an indefinite drain for a short distance after which the land is very flat. The mouth of one small creek has filled in so that it is now a pond indicating that the drainage is so sluggish, it does not have sufficient force to keep open the mouth of the creek.

6. WOODLAND COVER

The cover was classified in accordance with Chapter 5, Paragraph 5433 of the preliminary edition of the Topographic Manual dated June, 1949.

7. SHORELINE AND ALONGSHORE FEATURES

(a) All the shoreline is apparent except where sand has built up as a beach in protected small bights. At these points M.H.W.L. has been definitely identified only where the length of the beach exceeds 30 meters.

(b) Pamlico Sound has no periodic tide, consequently, the mean low-water line is the same as the mean high-water line.

8. OFFSHORE FEATURES

Inapplicable.

9. LANDMARKS AND AIDS

No landmarks are in the quadrangle.

The two fixed aids within the quadrangle were pricked directly on the photographs.
10. **BOUNDARIES, MONUMENTS AND LINES**

For legal descriptions of all boundaries in the project, see "Special Boundary Report", which has been submitted by Mr. Wilbur H. Nelson, and Supplemental Boundary Report by Mr. A. J. Wraight, which will be submitted. Both reports filed in Div. of Photogrammetry.

No boundary monuments are in the quadrangle. See item 68

11. **OTHER CONTROL**

 Recoverable topographic stations established are:

   (1) TEAR, 1949
   (2) SLAP, 1949

12. **OTHER INTERIOR FEATURES**

Inapplicable. (See Paragraph 15)

13. **GEOGRAPHIC NAMES**

This will be the subject of a special report, which will be submitted by Mr. A. J. Wraight, filed in Div. of Charts (Geo. Names Section).

14. **SPECIAL REPORTS AND SUPPLEMENTAL DATA**

Geographic Names Report (to be submitted) See item 13
Boundary Report submitted 14 February, 1949 to Washington, D.C. See item 10
Transmitting Letter with all Quadrangle Data forwarded with this report to Tampa.

15. **SWAMPS**

See paragraph 15 of Field Inspection Report for Quadrangle T-8993.

Photogrammetric Plot Report

This report covers the plot for maps T-8973 to T-8976 inclusive, T-8984 to T-8986 inclusive, T-8993 and T-8994, and is filed as part of the descriptive report for T-8974.
PHOTOGRAMMETRIC PLOT REPORT

This report is being submitted with T-8974.

31. DELINEATION

The manuscript was delineated by graphic methods.

Photographs and field inspection were adequate for delineation. No difficulties were encountered.

32. CONTROL

Sufficient control was provided to cut in necessary detail points. Control was positively identified and well placed.

33. SUPPLEMENTAL DATA

None used.

34. CONTOURS AND DRAINAGE

No difficulty was encountered during the delineation of the small amount of contours and drainage.

35. SHORELINE AND ALONGSHORE DETAILS

The shoreline inspection was adequate.

No low-water line has been shown (reference Item 7).

Shallow areas at Hog Island and Hog Island Point were discernable on photograph 22249 and have been so shown. See Item 67.

36. OFFSHORE DETAILS

None.

37. LANDMARKS AND AIDS

Reference Item 9. No unusual methods were used or difficulty encountered in the location of non-floating aids.
38. CONTROL FOR FUTURE SURVEYS

Two cards from 524* are submitted herewith and are listed in Item 49.
* Filed in Div. of Photogrammetry.

39. JUNCTIONS

This quadrangle joins T-8985 to the north and T-8993 to the west. Junctions are in agreement. Pamlico Sound is to the east and south.

40. HORIZONTAL AND VERTICAL ACCURACY

No statement. See item 66

46. COMPARISON WITH EXISTING MAPS

There are no topographic quadrangles or planimetric maps available for comparison. See item 62

47. COMPARISON WITH NAUTICAL CHARTS

Comparison was made with U.S.C & G.S. Nautical Chart 1231, scale 1:80,000, published 1938 (8th edition), latest correction date, December 23, 1949. The two are in good agreement. See item 65

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

REVIEW REPORT
Topographic Map T-8994
5 December, 1951

62. Comparison with Registered Topographic Surveys:
   T-1384a 1:20,000 1874-75

   Map T-8993 supersedes this survey in common areas for nautical charting purposes. There is evidence of shoreline changes.

63. Comparison with Maps of Other Agencies: None

64. Comparison with Contemporary Hydrographic Surveys: None

65. Comparison with Nautical Charts:
   1231 1:80,000 50-2/20

   No very important differences were noted.

66. Adequacy of Results and Future Surveys:

   This map meets the National Standards of Map Accuracy and complies with project instructions.

67. Alongshore Details:

   The shallow lines referred to under item 35 were deleted from the map manuscript because they did not appear to mark an abrupt change between shallow and deep areas. Also hydrographic data will be added by the Nautical Chart Branch.

68. Boundaries:

   The Gulrock Refuge was not positioned by this survey. According to item 57, Descriptive Report for T-8985, this refuge has not been surveyed and is presently untended. A plat of the refuge is included as part of the Supplemental Report on Boundaries for Project Ph-20(47) which is filed in the Division of Photogrammetry.

Reviewed by:

Everett H. Ramey

This map covers only a fringe of marsh and swamp and was not field edited since there were no questionable items after field inspection and compilation.

History of Hydrographic Information
T-8994
Pamlico Sound, North Carolina

Hydrography was compiled in accordance with the general specifications of 18 May 1949.

Depth curves and soundings are in feet at mean low water and originate with the following hydrographic surveys:

- H-661 (1857-58) 1:20,000
- H-1226 (1874) 1:20,000
- H-1227 (1874) 1:40,000
- H-1254 (1875) 1:20,000

These surveys comprise the latest available information as of the date of this compilation. Comparison was made with Nautical Chart 1231, scale 1:80,000 latest print date of 11-12-51.

The depth curves are shown at 6, 12 and 18 feet.

The hydrography was compiled by Everett H. Ramsey on 18 January 1952 and verified by R. E. Elkins on 18 January 1952.
