Number of Temporary Photo Hydro Stations established (III): None

Remarks:
SUMMARY T-9022

This planimetric survey is one of a series of 21 maps at 1:20,000 in the Gulf Coast area of Louisiana — each 7½ minutes in latitude and longitude.

The area covered by this project includes Houma, Louisiana, on the east to Vermilion Bay on the west and extends from the vicinity of the Intracoastal Waterway southward to Atchafalaya and Fourleague Bays.

Shoreline surveys for the Intracoastal Waterway of Project Ph-14(46) at 1:10,000 scale furnished some detailed information along both sides of the Waterway area for the planimetric maps of this project.

Adjoining this project to the west are 17 contemporary topographic quadrangles at 1:20,000 scale in project Ph-33(48). Adjoining to the east and covering the Intracoastal Waterway to Florida are a series of revision sheets at 1:20,000 scale of project Ph-1(45).
FIELD INSPECTION REPORT

QUADRANGLE 9022

Project Ph-21(47)

May 1948

1. DESCRIPTION OF THE AREA

This quadrangle is bounded on the east by longitude 91° 00', on the south by latitude 29° 37.5', on the west by longitude 91° 07.5', and on the north by latitude 29° 45.0'.

The principal cultural features are the Southern Pacific Railroad, U. S. Highway 90, and the Intracoastal Canal; all of which cross the quadrangle in an east-west direction. Bayou Boeuf runs in a north-south direction near the western limit of the quadrangle.

No large area is devoted to cultivation, but at one time the area was a source of much timber. The vegetation is primarily hardwood and where ever the large stands of timber are found, the land is a thick, matted swamp.

The field work was performed at a time when the water was very high and much of the area was flooded.

2. COMPLETENESS OF FIELD INSPECTION

Field inspection is believed to be complete and adequate and was performed in accordance with project instructions, dated 12 February 1948.

3. INTERPRETATION OF PHOTOGRAPHS

All detail appears to be clear and distinct on the photographs and no difficulty should be encountered by the compiler.

4. HORIZONTAL CONTROL

All USGS horizontal control stations within the quadrangle were recovered and identified on the field photographs. In addition several stations east of the quadrangle limit were recovered and identified to assist in controlling the radial plot.

All identification is positive.
5. **VERTICAL CONTROL**

   (not applicable to this project)

6. **CONTOURS AND DRAINAGE**

   (not applicable to this project)

7. **MEAN HIGH WATER LINE**

   Mean high water line in the quadrangle is to be drawn as viewed on the photographs. One small beach about 150 meters long, is located in the northeast section of the quadrangle. Due to the high stage of water, at the time of field inspection, no mean high waterline was determined for this area. **No tide - see Item 66 Review Report**.

8. **LOW WATER LINE**

   The low water line is synonymous with the apparent shoreline.

9. **WHARVES AND SHORELINE STRUCTURES**

   All wharves and shoreline structures were indicated on the photographs. One new slip was located directly on photo 22024 by plane table methods.

10. **DETAIL OFFSHORE FROM THE MEAN HIGH WATER LINE**

    (not applicable to this quadrangle)

11. **LANDMARKS AND AIDS TO NAVIGATION**

    No landmarks were selected in this quadrangle.

    One fixed aid to navigation, Bayou Cocodrie Leading Light 38, was located direct on photo 22022 in addition to its having been located on the previous project, Ph-14(46).
12. **HYDROGRAPHIC CONTROL**

(not applicable to this quadrangle)

13. **LANDING FIELDS AND AERONAUTICAL AIDS**

There are no landing fields or aeronautical aids in this quadrangle.

14. **ROAD CLASSIFICATION**

All roads were classified in accordance with current instructions.

15. **BRIDGES**

All bridge information for the area covered by this report as listed in the U. S. Engineers' "List of Bridges Over Navigable Waters of the United States" 1941 edition, was verified in the field, all clearances were carefully measured with a steel tape, and the published descriptions and clearances were found to be correct except for the following discrepancies, which were reported to the Local District Engineer as listed on the following pages.

Bridges over Bayou Boeuf were measured while checking topographic sheet T-8893 and the results were indicated on the topographic sheet and not the photographs.

Two bridges over Bayou Black near Gibson, Louisiana were measured and the measurements are noted on photograph 22022.

The U. S. Highway 90 bridge is of recent construction and is not listed in the "List of Bridges Over Navigable Waters of the United States", 1941 edition. The bridge listed on page 40 is the old bridge that was replaced.

The second bridge in Gibson, Louisiana is old and dilapidated and is limited to light traffic. The results of the field measurements of this bridge compare favorably with those listed in the "Bridge Book".

See attached page of discrepancies.
The render plate projections the left span headwall has been completely swept away.

Instead of 62.0°, as interceded 1947.

Span No. 66°, 1947.
16. **BUILDINGS AND STRUCTURES**

All substantial dwellings and other important buildings were indicated on the photographs.

17. **BOUNDARIES**

The quadrangle contains several parish boundaries that have been indicated on the photographs in their approximate positions. On those boundaries that do not follow natural objects, two or more points have been identified. These boundaries are not permanently marked. Within the quadrangle and to the north and east of the project six points on boundary lines have been identified.

Other than parish boundaries, no other boundaries are within the limits of this quadrangle.

Boundaries will be the subject of a special report to be submitted at a later date.

18. **GEOGRAPHIC NAMES**

Geographic names were covered adequately by "Special Report on Geographic Names; Houma, Louisiana to Vermilion Bay, Louisiana; Project Ph-14(46), dated July 1947".

19. **PREVIOUS SURVEYS; Ph-14(46)**

Ozalid prints of T-8892 and T-8893 showing the Intracoastal Waterway through the quadrangle, were inspected in accordance with Paragraph 20 of the instructions for the project. Notes were made directly on the prints, cross referencing them to the appropriate photographs, where changes and additions were necessary.

COMPUTED BY: BALTIMORE OFFICE
DATE: __________________________
CHECKED BY: RBW
DATE: Dec 23, 1948
PHOTOGRAMMETRIC PLOT REPORT

This is the subject of a special report submitted to the Washington Office, 5 May, 1949 and is included in Descriptive Report T-9033.

31. DELINEATION

This quadrangle was compiled by the graphic method.

Most of the detail on the film positives of shoreline manuscripts T-8921, T-8892 and T-8893, project PH 14(46), reduced to 1:20,000 scale did not conform to the pass points established by the radial plot run in this office. That which did conform was traced directly to the map manuscript. The remainder was delineated by the graphic method.

The field inspection was adequate along the shoreline and most of the inshore work. Where field inspection was neglected or discrepancies seen, notes to that effect were put on the discrepancy overlay for the attention of the field editor.

32. CONTROL

The density and placement of secondary control was such that no difficulty was encountered in cutting in detail points for the compilation of the manuscript.

33. SUPPLEMENTAL DATA

Film positives of shoreline manuscripts T-8921, T-8892 and T-8893, project PH 14(46) were used as reference material for the delineation of this manuscript.

34. CONTOURS AND DRAINAGE

Contours are inapplicable to this project.

No difficulty was encountered in the interpretation or delineation of drainage.

35. SHORELINE AND ALONGSHORE DETAIL

The shoreline inspection was adequate and no difficulty was encountered in its delineation. The shoreline in Lake P locomotive was delineated as approximate.
36. **OFFSHORE DETAIL**

There are no offshore details that need investigation by the hydrographer party.

37. **LANDMARKS AND AIDS**

There are no landmarks.

One fixed aid to navigation "BAYOU COCODRIE LEADING LT. 38" was transferred to the office photographs and cut in radially. The position of this light as shown on T-8892 PH 14(46) does not agree with the position shown on the manuscript. Two Forms 567, one for deletion of this aid from its former position, and one for charting are submitted with this report.

38. **CONTROL FOR FUTURE SURVEYS**

One card, Form 524 is being submitted. This station will be included under Item 49.

39. **JUNCTIONS**

T-9027 to the south: in agreement

T-9021 to the west: in agreement

Napoleonville quadrangle, Mississippi River Commission, 1:62,500, 1935, to the north: in agreement except for the alternate route of the Intracoeastal Waterway dug since publication of the quadrangle.

Gibson quadrangle, Mississippi River Commission, 1:62,500, 1944 to the east: in agreement.

40. **HORIZONTAL AND VERTICAL ACCURACY**

No statement.
46. COMPARISON WITH EXISTING MAPS

Comparison has been made with topographic quadrangle Morgan City, La., Mississippi River Commission scale 1:62,500 edition of 1935, reprinted 1938.

The manuscript and quadrangle appear to be in good agreement with the exception of the alternate route of the Intracoastal Waterway dug since publication of the quadrangle. Some cultural changes were also noted.

47. COMPARISON WITH NAUTICAL CHARTS

Comparison has been made with Chart 880, scale 1:40,000, edition of Nov. 1949, bearing a print date of Nov. 28, 1949. That part of the chart that had 1:10,000 photograph coverage is in agreement with the manuscript. The detail of remainder of the chart was taken from the Morgan City quadrangle and the same differences were noted as stated under Item 46.

Comparison was also made with chart 1050, scale 1:175,000 edition of 1939 bearing a print date of Nov. 3, 1947. Due to the large difference in scale no major differences could be discerned except that areas shown on the chart as marsh are actually swamp.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY:

None.

ITEMS TO BE CARRIED FORWARD:

NONE.

Rayford E. Smith, Jr.
Cartographic Survey Aid

A substantial discrepancy in horizontal position exists at the Bayou Black Settlement and for some distance to the east along the Intracoastal Waterway between this survey and the plane table traverse for Section 18 of T-6179.

According to the Descriptive Report for T-6179 the traverse covering this area closed 87 meters long.

Adequate triangulation in this area controlled two different radial plots of T-8893 and T-9022, (the latter being stronger) and both these surveys are in agreement.

Under these circumstances the positions for T-9022 supersede those found on Section 18 of T-6179.

63. Comparison with Maps of Other Agencies

Morgan City, La., Quadrangle, 1:62,500 U.S.E. 1938

64. Comparison with Contemporary Hydrographic Surveys

None contemporary.

66. Miscellaneous

(a) Swamp Areas are comprised of mixed hardwoods.

(b) Tide - although there is no tide in this area there are changes in the water level. The high and low waters vary as much as two feet from normal due to wind conditions.

(c) Boundaries - the boundary line between Assumption and Terrebonne Parishes is described as a "direct", i.e. straight, line. However, the markers recovered at the Southern Pacific RR and at State Highway 280
are maintained by the State Highway Department. Since the "direct" line has never been surveyed, the boundary depicted is the one accepted by the local authorities.
