Form 804

U. S. COAST AND GEODETIC SURVEY
DEPARTMENT OF COMMERCE

DESCRIPTIVE REPORT

Type of Survey: PLANIMETRIC

Field No. Ph-21(A7) Office No. T-9029

LOCALITY

State: LOUISIANA

General locality: BAYOU BLACK—INTRACOASTAL WATERWAY

Locality: LAKE HATCH

194/50

CHIEF OF PARTY

C. W. Clark, Chief of Field Party.
A. L. Wardwell, Tampa Photogrammetric Office

LIBRARY & ARCHIVES

DATE: Dec. 27, 1951
DATA RECORD

T - 9029

Project No. (II): Ph-21(47)  Quadrangle Name (IV): Lake Hatch and Vicinity

Field Office (II): Morgan City, La.  Chief of Party: Charles W. Clark
Photogrammetric Office (III): Tampa, Florida  Officer-in-Charge: Arthur L. Wardwell
Instructions dated (II) (III): February 12, 1948  Copy filed in Division of Photogrammetry (IV)

Method of Compilation (III): Graphic

Manuscript Scale (III): 1:20,000  Stereoscopic Plotting Instrument Scale (III): Inapplicable

Scale Factor (III): None

Date received in Washington Office (IV): 3-24-50  Date reported to Nautical Chart Branch (IV): 3-29-50

Applied to Chart No.  Date:  Date registered (IV): 11-8-51

Publication Scale (IV): 1:50,000  Publication date (IV): Sept. 1951

Geographic Datum (III): N.A. 1927

Vertical Datum (III): M.H.W. except as follows:
Elevations shown as (2) refer to mean high water
Elevations shown as (2) refer to sounding datum
i.e., mean low water or mean lower low water

Reference Station (III): CANAL - 1934

Lat.: 29° 32' 08.515 (262.2m)  Long.: 90° 48' 29.584'' (795.6m)  Adjusted

Plane Coordinates (IV):

Y =
X =

State: Louisiana  Zone: South

Roman numerals indicate whether the item is to be entered by (II) Field Party, (III) Photogrammetric Office, or (IV) Washington Office.

When entering names of personnel on this record give the surname and initials, not initials only.
Areas contoured by various personnel
(Show name within area)
(II) (III)
DATA RECORD

Field Inspection by (II): W.M. Reynolds Date: 5-6-48

Planetary contouring by (II): Inapplicable Date:

Completion Surveys by (II): C.A. Navin Date: July, August, 1950

Mean High Water Location (III) (State date and method of location):
3-13-48 Air Photo Compilation

Projection and Grids ruled by (IV): W.O. (W.E.W.) Date: 3-2-48

Projection and Grids checked by (IV): W.O. (W.E.W.) Date: 3-2-48

Control plotted by (III): J. Councill Date: 10-5-48

Control checked by (III): H.R. Rudolph Date: 10-15-48

Radial Plot by (III): M.M. Slavney Date: 5-5-49

Stereoscopic Instrument compilation (III):
Planimetry Inapplicable Date:
Contours Inapplicable Date:

Manuscript delineated by (III): Charles J. Downing Date: 10-9-49

Photogrammetric Office Review by (III): J.A. Giles Date: Dec. 1949

Number of Recoverable Photo Stations established (III): 2
  Number of Temporary Photo Hydro Stations established (III): None

Remarks:
Summary to Accompany T-9029

Planimetric survey T-9029 is one of a series of 21 maps at 1:20,000 scale in the Gulf Coast area of Louisiana, each 7½ minutes latitude by 7½ minutes longitude.

The area covered by this project includes Houma on the east to Vermilion Bay on the west and extends from the vicinity of the Intracoastal Waterway southward to Atchafalaya and Fourleague Bays.

Shoreline surveys for the Intracoastal Waterway of Project Ph. 1(46) at 1:10,000 scale furnished some detailed information along both sides of the Waterway area for the planimetric maps of this project.

Adjoining this project to the east and covering the Intracoastal Waterway to Florida are a series of revision sheets at 1:20,000 scale of Project Ph-1(45). To the west of this project are 17 contemporary quadrangles at 1:20,000 scale of Project Ph-33(48).
THE FIELD INSPECTION REPORT COVERS

QUADRANGLES T-9028, T-9029, T-9030,

AND IS BOUND WITH T-9030.

1 FT. = 304.8006 METER

COMPUTED BY: J. Council

DATE: Nov. 5, 1948

CHECKED BY: H.R. Rudolph

DATE: Nov. 15, 1948
The Photogrammetric Plot Report was submitted on May 5, 1949 and is included in Descriptive Report T-9033.

31. **DELINEATION**

Delineation was accomplished by graphic methods. The quality of the photographs was good, and little difficulty was experienced during delineation. Field inspection was reasonably good. An attempt was made to use film positives of shoreline surveys number T-8889 and T-8890 Ph-14(47). Although the pass point agreement was good, comparison showed that the Tampa Office position for the Intracoastal Waterway fell approximately 6 meters north of that delineated on the film positives. Consequently the film positives were disregarded, and all delineation was done from the photographs.

32. **CONTROL**

Identification, placement and density of control was adequate.

33. **SUPPLEMENTAL DATA**

Some reference was made to film positives T-8889 and T-8890 Ph-14(47) shoreline manuscripts covering a portion of the area, reference Item 31.

34. **CONTOURS AND DRAINAGE**

Contours are inapplicable.

Two large bayous cross the northeast quarter of this map. The Intracoastal Waterway canal crosses the map from west to east, just north of the southern limits. There are several navigation and drainage canals in the area. The entire area is drained by a series of drainage ditches.

35. **SHORELINE AND ALONGSHORE FEATURES**

Shoreline inspection was adequate for accurate and complete delineation. No low-water or shoal lines have been shown.

36. **OFFSHORE DETAILS**

No unusual problems were encountered.
37. **LANDMARKS AND AIDS**

One landmark that was originally located on T-8890, Ph-l4(47), has been given a new position, reference Item 31.

There are no nonfloating or aeronautical aids.

38. **CONTROL FOR FUTURE SURVEYS**

Two Forms 524 were submitted with T-8890 of Ph-l4(47) for stations PBM-30 and PBM-32, 1934. Due to discrepancies in the plot between T-9029 and T-8890 (see Item 31) it was necessary to make corrections in the plotted positions of these stations. Form 524 for these stations have been corrected accordingly.

A list of recoverable topographic stations is included in Item 49.

39. **JUNCTIONS**

Junctions were made with T-9028 on the west, and with T-9030 on the east. Both junctions were in good agreement. A junction could not be made on the south with planimetric map T-5288(1932), and all details on this manuscript were delineated 1.25 cm. beyond the neat line. There is no contemporaneous survey to the north.

40. **HORIZONTAL AND VERTICAL ACCURACY**

No statement.

46. **COMPARISON WITH EXISTING MAPS**

Comparison was made with a U.S. Geological Survey topographic quadrangle "Gibson, Louisiana" at a scale of 1: 62,500, edition date of 1944. The two surveys are in good agreement.
47. **COMPARISON WITH NAUTICAL CHARTS**

Comparison was made with Intracoastal Waterway Charts 879 and 880, scale 1: 40,000, published in November 1949. The shoreline surveys mentioned under Item 31 were the source of the planimetry of this chart and the same difference in horizontal displacement applies.

Comparison was also made with Nautical Chart 1050, scale 1: 175,000, published in October 1939, and bearing a print date of November 3, 1947. The topographic map listed under Item 46 was apparently the main source of the planimetry shown on this chart and the same statement applies.

**ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY**

None.

**ITEMS TO BE CARRIED FORWARD**

None.

Approved and Forwarded:

FIELD EDIT REPORT
Quadrangle T-9029

51. METHODS

All features were checked by visual methods with the exception of canals, which were added by plane table methods.

All corrections, deletions and additions have been shown on the field edit sheet in violet or green ink.

All field edit data is to be found on one (1) field edit sheet and one discrepancy print.

52. ADEQUACY OF COMPILATION

The compilation appears good.

53. MAP ACCURACY

Although no measurements were taken the positioning of detail appears to be very good.

54. RECOMMENDATIONS

None

55. EXAMINATION OF THE PROOF COPY

The proof copy may be submitted to Mr. T. Baker Smith, Surveyor, of Houma, Louisiana or to Mr. R. A. Bazet, Clerk of Court, Terrebonne Parish Courthouse, Houma, Louisiana, for examination and comment.

There are few geographic names changes in this area. At 29 36° 18'/
90 47° 7' the Name CRESENT have FARM added. This change is according to the Houma Post Office and to Mr. Alfred Ledet, Overseer, Crescent Farm Plantation, Delarge Route, Houma, Louisiana.

The school at 29 36° 6'/90 46° 8' is named the CRESENT FARM SCHOOL; the school at 29 36° 41'/90 52° 1' is a colored school locally known as the BAYOU BLACK SCHOOL; the school at 29 36° 51'/90 51° 3' shown on the manuscript as Bayou Black School is officially known as BLANCHARD SCHOOL, however it receives some mail addressed to the Bayou Black School and is known by the latter name by many local residents. The names of these schools were taken from a Terrebonne Parish Board of Education Map, however there were no members of the board available for interview.

The name WADDEL at 29 33° 1'/90 47° 8' should be changed to MINOR.
The MINOR canal was originally dug from Bayou Black southwards towards the Gulf of Mexico and receives its name from the owner of the plantation which it drains. The five references to the WADDEL canals as shown on the manuscript should be deleted. These ditches, which now serve as drainage ditches, were originally dug in the late 1900's to facilitate the removal of logs by the Waddel Lumber Company. The name is no longer known by the local residents and the canals are referred to by any specific name at present. These facts were verified by Mr. R. A. Bazet, Clerk of Court and Recorder, Terrebonne Parish, Houma, Louisiana. Mr. Bazet has made a study of geographic names in the parish and is willing to examine all maps for possible corrections to the names as shown.

56. TRAILS

On the 1948 Coast and Geodetic Survey photography of this area, there appear numerous well defined lines crossing the swamp and marsh. These lines are marsh buggy tracks made during oil exploration work and are no longer clearly visible on the ground.

57. HORIZONTAL CONTROL

See Item 4, Field Inspection Report.

U. S. Coast and Geodetic Survey triangulation station EAST, 1934 was searched for and reported lost.

REVIEW REPORT
Planimetric Map T-90
January 16, 1951

62. Comparison with Registered Topographic Surveys

T-8890 1:10,000 1946

This planimetric survey supersedes the above-listed surveys for nautical charting purposes.

63. Comparison with Maps of Other Agencies

Gibson, La., quadrangle, U.S.G.S., 1:62,500 1944

64. Comparison with Contemporary Hydrographic Surveys

None

65. Comparison with Nautical Charts

879 1:40,000 March 1949
880 1:40,000 November 1949
1050 1:175,000 April 1950
1116 1:458,596 June 1950

The following differences have been noted between Chart 880 and this survey:

(a) In accordance with the new instructions, field roads have been for the most part omitted with the consequence that there is a de-emphasis of the road pattern on T-9029 as compared to that on Chart 880.

(b) The HANSON CANAL is now complete and is so shown on T-9029.

(c) The railroad siding running south from WATEROOF is not shown on Chart 880.

(d) Bridge information for this survey was supplied by the Field Inspection Report which is included in Descriptive Report for T-9030.

(e) Field edit reports that the trees in the swamp areas are predominantly of the mixed deciduous type and therefore not properly designated as "cypress" swamp.
66. Adequacy of Manuscript

This planimetric quadrangle complies with project instructions and with the National Standards of Map Accuracy.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
