SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT T-9151

Several years have elapsed between the compilation and final review of this map. No photographs were available at the time of final review. The compilation record was added by the final reviewer.

This shoreline manuscript, scale 1:10,000, is one of 43 maps that comprise Project PH-152, which is in the western part of Prince William Sound. T-9151 is on the south edge of the project. Only the extreme northwest corner of the sheet was mapped.

Compilation was by radial plot in the spring of 1955, using ratio prints of 1:30,000 scale photography taken in July 1954. There was no field inspection.

To strengthen the plot, additional control was identified during the 1955 field season. New positions for pass points and photo centers were determined by stereoplani-graph bridging. The manuscript was revised in 1956 to incorporate datum changes caused by the new positions.

The Field Inspection Report by Kenneth A. MacDonald in 1955, which is bound with this report, indicates that little, if any, field edit was accomplished, other than the recovery and identification of previously established control and the establishment and identification of new control. None of these stations were in the area of this map.

Inasmuch as control was inadequate for accurate compilation, the classification of this map is PRELIMINARY.

Final review was done at the Atlantic Marine Center in February 1971.

The compilation manuscript was a vinylite sheet 4 minutes 45 seconds in latitude by 11 minutes 15 seconds in longitude.

A cronaflex copy of the final reviewed manuscript and a negative have been forwarded for record and registry.
21. AREA COVERED

Shoreline manuscripts (preliminary) included in this report are the following: T-9146, T-9147, T-9148, T-9149, T-9150 and T-9151.

22. METHOD

Polyconic projection and grid lines were ruled at 1:10,000 scale on the manuscripts. The grid lines were used in joining the manuscripts for the radial plot. Manuscripts T-9144 and T-9145 were included with those previously listed for one laydown. A tab was made to extend to control stations LATOUCHE COMM. CLUB, FLAG POLE, 1927, SUMMIT, 1905, and LATOUCHE HIGH PEAK, 1905 on the east.

The calibration templates were used, for all photographs involved, in the preparation of the vinylite hand templates.

The photographs were positype paper prints with enlargement of three and four diameters. All photographs used are listed in the data record of this report.

The results obtained from the radial plot most probably meet the requirements of mapping accuracy in the areas covered by manuscripts T-9146, T-9148, T-9150 and are less accurate in the areas covered by manuscripts T-9147, T-9149 and T-9151. These conditions are the results of a combination of factors, such as: 1. Flight line coverage of single-lens photography, and 2. scarcity of identifiable control, especially on the north end of ELRINGTON ISLAND and west central coast of LATOUCHE ISLAND. Note: Metal templates were prepared and used in an attempted laydown of the plot but the results were questionable and the method abandoned.

Some difficulty was encountered in transferring control from 1:40,000 scale prints to 1:10,000 scale prints. (See paragraph 24 of this report.)

23. ADEQUACY OF CONTROL

An attached sketch indicates the density and distribution of control within the area covered by this report. The majority of control stations were office identified, and only seventy-two percent held in the plot. Control is inadequate/void at or near north end of Elrington Island and on west central coast of Latouche Island.

Map position is believed to be least accurate in the eastern half of manuscripts T-9147, T-9149 and T-9151.
24. **SUPPLEMENTAL DATA**

The following planitable sheets were aids in identifying control and in the delineation of shoreline and foreshore features:

- 2770 - scale 1:40,000, 1906
- 3093 - scale 1:20,000, 1910
- 4285 - scale 1:10,000, 1927
- 4308 - scale 1:20,000, 1927
- 4316 - scale 1:10,000, 1927

Photo-identification data of horizontal control, on 1:40,000-scale prints by the 30th Engineer Battalion in 1951, was used in conjunction with office identification of control on 1:10,000-scale prints.

25. **PHOTOGRAPHY**

The photography was adequate as to coverage and overlaps, but inadequate as to placement of flight lines and definition on outer edges.

Although the higher altitude photography minimized relief displacement of trees along the shoreline, it did not alleviate the problem of pinching control and pass points in those areas.

**SKETCH AND GEOGRAPHIC POSITIONS**

A sketch and list of geographic positions are attached.

PHOTOMETRIC PLOT REPORT
Prince William Sound, Alaska
Project 6152, T-9148 thru T-9150
Scale 1:10,000
May 1956

21. AREA COVERED

This report applies to shoreline maps T-9148 through T-9150. T-9148 and T-9150 are classified as "Incomplete" maps and T-9149 is classified as a "Preliminary" map.

22. METHOD

Refer to the corresponding paragraph in the attached Photogrammetric Plot Report No. 1 attached to this Descriptive Report.

23. ACCURACY OF CONTROL

Control was adequate for the area of T-9143 and T-9150 and map positions are within Bureau standards. Control is inadequate for the area of T-9149 and also for T-9151 which latter map is to the east of T-9150 and south of T-9149. Horizontal control recovered or established in 1955 and field identified on photographs was available for this plot.

24. SUPPLEMENTAL DATA

None.

25. PHOTOGRAPHY

Refer to corresponding paragraph for Photogrammetric Plot Report No. 1.

SKETCH AND FORM M-2388-12: CONTROL STATION DATA

A sketch and list of geographic positions are attached.

Submitted:

K. N. Maki
The following stations, field identified on photographs, were used in this radial plot:

**T-9148**

- Off, 1910 0.3 mm
- Fed, 1910 0.4 mm
- Rock (Rock 2) 1927 Held
- Isle, 1910 0.4 mm
- Top 2, 1927 Sub. pt. Held
- Swan, 1927 " " Held
- Sand, 1910 " " 2 rays of 3 held
- Pyke, 1927 " " Held
- Bald, 1955 " " Held
- Pass, 1955 " " Held

*Station Fo, 1927 was field identified as the top of the highest rock in a group of rocky islets but this is the description of station Rock (Rock 2) 1927 and station Fo, 1927, according to description, is 10 feet above HHW. Thus, the station identified as Fo, 1927 is actually station Rock (Rock 2) 1927 which latter station was held in the radial plot. The subject stations are approximately 70 meters distant from each other.*

31. **DELINEATION:**

Shoreline and foreshore features were delineated on the manuscripts from office stereoscopic interpretation only.

Features shown were first drawn on a piece of vinylite superimposed on the photograph with the most nearly true scale. Graphic methods were then used to compile and delineate the MML and to adjust the planimetry to manuscript scale by holding to compilation points of near-sea-level elevation.

The wooded nature of these islands and the three- and four-time enlargement of the photographs are factors which prevent a complete symbolization of the MML and offshore features. The displacement of the trees causes overhang, and shadows are also a deterrent in properly identifying horizontal control alongshore. Consequently, more use is made of the dashed approximate shoreline symbol than is desired. Due to the fact that the photography was flown at nearly half-tide with the W-camera coverage, much of the shallow areas alongshore show as being close to the approximate Low Water line and have been so symbolized in preference to the dashed shallow line symbol. It should be verified before charting.

32. **CONTROL:**

Only two field-identified control stations were held. All other control was office identified (see radial plot report). The two field identified stations fall outside (north of) the manuscripts covered by this report.

33. **SUPPLEMENTAL DATA:**

See radial plot report for planetable topographic surveys which were used as an aid in office identifying control and delineating the shoreline and foreshore features.

34. **CONTOURS AND DRAINAGE:**

Not applicable.

35. **SHORELINE AND ALONGSHORE DETAILS:**

The shoreline and alongshore features were delineated from office interpretation of the photographs. In regard to the interpretation of the MML, it should be noted that the photographs were taken at approximately half tide, the range of tide being 12 feet. Several fairly definite lines alongshore are visible on the photographs. The line judged most likely to be the MML was chosen and the compilers made a consistent effort to delineate this line on the manuscripts.

Wider use was made of the low-water line symbol than is generally the case on preliminary manuscripts. The horizontal position of the low-water line is questionable due to the range of tide and time of photography. For the same reason, many of the small offshore rocks may be incorrectly symbolized for lack of reference data.
There is probably ambiguity in the use of the ledge and boulder beach symbol. However, an attempt was made to reserve the ledge symbol for the sheet rock ledge-type formation.

The MHWL shown with the approximate MHWL symbol is thought to be fairly accurate in relation to the other details on the manuscripts as regard to horizontal position and general configuration. Because of the tree overhang and heavy shadow, field inspection is particularly needed in these areas.

36. **OFFSHORE FEATURES:**

**T-9146**

Office interpretation of offshore details is subject to field verification by the hydrographic party. All visible rocks have been shown, and reference to old topographic surveys and to the nautical charts were an aid in the attempt to identify and locate isolated rocks. Not all of them could be seen on this photography, and the compiler has tried to locate only those with a definite image.

37. **LANDMARKS AND AIDS:**

**T-9149**

Two lights shown on Nautical Chart 8523 were searched for. Evans Bay Light on the north end of the peninsula, south side of Sawmill Bay, could not be identified. Elrington Passage Light on the island west of Battles Island was identified and pricked on two photos. As the two cuts were strong and scale excellent the position of the light is believed to be good. G.P.: 60° 02' (1492m) 148° 00' (503m).

In the area of San Juan and Port Ashton tanks of possible landmark value were delineated. The tank delineated at San Juan agrees favorably with landmark position shown on Chart 8523. At Port Ashton the tanks, as shown on the manuscript, do not agree with the position on the chart.

**T-9150**

Evans Island Light on the southeast shore of Evans Island was searched for but could not be identified on the photos.

38. **CONTROL FOR FUTURE SURVEYS:**

A set of office prints were prepared for the use of the hydrographic party in establishing photo-hydro stations in accordance with Photogrammetry Instructions No. 45.

39. **JUNCTIONS:**

Junctions were effected on all sides of these manuscripts, except on the north of T-9146 and T-9147 where the junction may not agree with the Advance Manuscripts which are in progress on T-9144 and T-9145.
40. **HORIZONTAL AND VERTICAL ACCURACY:**

See Paragraph 22, Method, of the radial plot report.

**Note:** Control stations Slide, 1927 (T-8143) and Con, 1927 (T-9150) were not used in controlling the radial plot. During compilation it was noted that their plotted positions fell on the delineated positions of small offshore rocks, affording a good field horizontal accuracy check in the event the stations are recoverable.

Inasmuch as the time and date of the Air Force photography was unknown, a comparison was made with the adjoining photography and it was concluded that the stage of tide was near high water. It is, therefore, possible that the shoreline is of less accuracy where these photographs were used for delineation.

46. **COMPARISON WITH EXISTING MAPS:**

A comparison was made with USGS Quadrangles Elying Sound D-3, Elying Sound D-4, Seward A-3, and Seward A-4, during compilation. Due to scale, these manuscripts are of better detail and will supersede the quadrangles when the horizontal accuracy is verified by forthcoming field inspection in 1955.

47. **COMPARISON WITH NAUTICAL CHARTS:**

All manuscripts were compared with Nautical Chart No. 8523, scale 1:40,000, published January 1935, corrected to July 151.

**T-9116**

Chart 8523 shows a rock awash at 60° 04' 143° 15.5' which could not be found on the photographs. All other charted rocks within the limits of this manuscript were located.

**T-9147**

Not all of the offshore rocks could be located between the small islands just south of Guguaik Bay. The foul ground symbol is shown to indicate the danger area.

Several rocks offshore from the peninsula on Evans Island, northeast of Iktua Rocks, were not visible on these photographs and are not located.

**T-9148**

Numerous offshore rocks awash shown on Chart 8523 around Bettles Island, in Sawmill Bay, were searched for and could not be identified. The bridge and road shown on the chart at Horseshoe Bay, on the west side of Latouche Island, is nonexistent.

**T-9150**

The rock awash just offshore on the south side of North Twin Bay cannot be seen on this photography.

SUPPLEMENT TO COMPILED REPORT

Surveys T-9145 through T-9151

Field work in 1955 included the identification of existing triangulation stations and the establishment of some new ones. These stations are listed in the Photogrammetric Plot Report for these surveys which is part of this descriptive report.

New bases at a scale of 1:10000 were prepared for use in the relocation of photo-centers and pass points by radial plot methods. The general shift in datum between this plot and the preliminary plot was small. Areas which were recompiled differed from the preliminary positions as great as approximately 20 meters.

Because most areas were in agreement in position with the preliminary manuscripts, no new manuscripts were prepared. The preliminary manuscripts were corrected where position shifts or errors were indicated. All changes are shown in red. Also segments of shoreline on T-9148 and T-9150 which were not compiled on the preliminary manuscripts are shown on these surveys. Surveys T-9148 and T-9150 are classed as "Incomplete" until complete shoreline inspection is accomplished; T-9149 and T-9151 are classed as "Preliminary".

FIELD INSPECTION REPORT
PRINCE WILLIAM SOUND, WESTERN PART

PROJECT 1277
Ship BOWIE
H.C. Applequist
Chief of Party

2. A REAL FIELD INSPECTION:

The area is mountainous and is heavily wooded on the lower slopes. Quality of the photographs was good.

2. HORIZONTAL CONTROL:

The following supplemental control stations were established by triangulation:

BALD 1955  IKTVA ROCK 1955  BETTE 1955
PASS 1955  STUMP 1955  MILL 1955
CRAB 1955  SHIP I. TREE 1955  ADD 1955
HARD 1955  DONALD 1955  NOD 1955
SIMPLE 1955  RINGTON 1955  EVANS IS, LT. 1955
MOON 1955  NAVI 1955  ERLINGTON IS, DAY
MAYEE 1955  FLATTING 1955  BEACON 1955
RAIN 1955  SCRUB 1955  ERLINGTON PASSAGE
NED 1955  LT. 1955  EVANS BAY LT. 1955

The following stations are reported lost on form 526.

CUBE 1910  HORN 1910  BEN 1927
DED 1910  HEX 1910  PRIEST 1906
JUT 1910  CUT 1910  TANG 1906
PIK 1910  PAS 1910  TEN 1927
VI 1910  ROT 1910  GOOD 1906
SHIP 1910  BIG 1910  GREEN 1910
SIR 1910  SPOT 1920  LAP 1910
EAT 1910  SLIDE 1927  BEAR 1907
WOOD 1910  SAM 1927  PORT 1917
BAD 1910  PEN 1927  SAID 1948

LEHE
Stations BEAR, 1907 and PORT, 1917 are reported lost but were identified for photo control. BEAR, 1907 is a tree which has fallen, the station mark at PORT, 1917 was found but the rock it was set in had been moved, however the station was pricked with sufficient accuracy for photo control.

The triangulation in the northern part of Prince of Wales Passage could not be recovered, supplemental control was established and identified as substitutes. Supplemental control was also established and identified in place of RED, 1927 and CLEARING, 1906.

4, 5, & 6 Inapplicable.
7. SHORELINE AND ALONGSHORE FEATURES:

Time did not permit a detailed inspection of the shoreline, however notes on the field photos were made wherever possible.

8, 9 & 10 Inapplicable.

11. OTHER CONTROL:

Photo Hydro control was established using the preliminary manuscript. These stations are shown as red circles on the office photos.

Two topo disks, HANK, 1955 and BLUE 1955 were set in the vicinity of Mc Clure Bay, these are to be located by the photogrammetric office.

12 & 13 Inapplicable.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA:

Control station identification cards are submitted for all control identified on the photos.

Recovery notes for triangulation will be submitted direct to the Washington Office.

Triangulation data for Supplemental Control established will be submitted to the Washington Office.

Descriptions of Recoverable topo. Stations, HANK, 1955 and BLUE, 1955 are submitted with this report.

Respectfully submitted

REVIEW REPORT T-9151

SHORELINE

FEBRUARY 26, 1971

61. GENERAL STATEMENT:

See Summary on page 6 of this Descriptive Report.

An ozalid comparison print, (page 27), with differences noted in Items 63 and 65 is bound with the original of this report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

No registered topographic surveys were available at the time of final review; no comparison was made.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A visual comparison was made with U.S.G.S. Quadrangle BLYING SOUND (D-3), scale 1:63,360, dated 1953. One difference, a rock, between the two maps is noted in brown on the comparison print.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

No hydrographic survey was available at the time of final review; no comparison was made.

65. COMPARISON WITH NAUTICAL CHARTS:

A visual comparison was made with Chart 8523, scale 1:40,000, 4th edition, dated October 10, 1966. One difference between the chart and T-9151 is noted in red on the comparison print. This is probably the same rock indicated on the U.S.G.S. quadrangle and noted in Item 63.
66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

Due to the lack of triangulation to control this map and the lack of field inspection of shoreline, this map is classified as PRELIMINARY and does not comply with the National Standards for Map Accuracy.

## Record of Application to Charts

**File With Descriptive Report of Survey No.**

### Instructions

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

1. Letter all information.
2. In "Remarks" column cross out words that do not apply.
3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
