Drafting verified for reproduction by (IV): W. H. Hallum

Proof Edit by (IV):

Land Area (Sq. Statute Miles) (III): 97 sq mi (T-9231 only)
Shoreline (More than 200 meters to opposite shore) (III): 8 miles
Shoreline (Less than 200 meters to opposite shore) (III): ?
Control Leveling - Miles (II): None
Number of Triangulation Stations searched for (II): Recovered: Identified: One
Number of BMs searched for (II): Recovered: Identified: None
Number of Recoverable Photo Stations established (III): Two
Number of Temporary Photo Hydra Stations established (III): Two

Remarks: *from 1951 predictions*

Tide Predictions, Alaska were prepared by the Division of Tides and Currents for the more accurate prediction of tides at various points in this part of project Ph-3(46). Details for T-9231 are on reverse side of this page.

*See reverse side of this page*

Louis J. Reed, Chief
Stereoscopic Mapping Section
Photogrammetric Engineer
Summary to Accompany T-9231

Ph-8(46) covers the north shore of Bristol Bay in Alaska and runs from the Egegik River and Kvichak Bay on the East to Cape Newenham on the West.

It is divided into three parts as follows:

Ph-8(46) A includes 23 planimetric maps in the general area of Kvichak Bay and extends from Egegik Bay to Nushagak Bay.

Ph-8(46) B is composed of two shoreline surveys on the Egegik River between Egegik Bay and Lake Becharof.

Ph-8(46) includes 45 topographic maps covering the area from Nushagak Peninsula westward to Cape Newenham and north to Goodnews Bay. It includes offshore islands such as Hagemeister and the Walrus Islands.

T-9231 contains Togiak Village and Togiak River. Togiak Bay bounds the area of T-9231 to the southwest.

The map manuscript consists of one sheet, 7½-minutes in latitude and 20 minutes in longitude, at a scale of 1:20,000, with a contour interval of 50 feet. A cloth-backed lithographic print of the map at the compilation scale will be registered with the Descriptive Report in the Bureau Archives. This map will not be published.
FIELD INSPECTION REPORT

2-20:

See two separate reports entitled:

PROJECT REPORT
AERIAL PHOTOGRAPH CONTROL AND INSPECTION
BRISTOL BAY, ALASKA

Photogrammetric Engineer
RADIAL PLOT REPORT

21-30:

See descriptive report to accompany map manuscript T-9237 which radial plot report also covers the area of this quad.

Louis J. Reed, Chief
Stereoscopic Mapping Section
Photogrammetric Engineer
31. Delineation:

Contours and all cultural features were delineated simultaneously on the Reading Plotter, model "A". Photo coverage was complete and shoreline inspection was adequate. This also includes the area of T-9230 generally east of 160° 25'. The land area of both quads is now completely mapped as a part of this project.

32. Control:

Horizontal control was not as dense as desired in this area, but a plot has been constructed which is believed will meet accuracy standards. Refer to the radial plot report where this matter is discussed in detail.

Sufficient vertical control was furnished for contouring purposes. It consisted of sea-level datum at the shoreline, plus elevations on inland peaks and water surfaces.

33. Supplemental Data:

a. Graphic Control Surveys: None.

b. Hydrographic Surveys: None.

c. Plotting Instrument Photos (metal-mounts):

20500, 20501, 28589 thru 28593, and 28619 thru 28623.

d. Field Inspection Photos:

18105, 18106, and 18108.

e. Computation References:

"TABULATION OF ELEVATIONS AND COMPUTATIONS OF ELEVATIONS BY MAP MANUSCRIPTS FOR VERTICAL CONTROL STATIONS IN THE AREA OF MAP MANUSCRIPTS T-9227, T-9229, T-9230, T-9234, T-9235, T-9236, T-9240, and T-9241."

34. Contours and Drainage:

The quality of the photographs used on the plotting instrument was satisfactory for contouring purposes, and no areas of questionable contours remain.
35. Shoreline and Along-Shore Details:

Instrument photos were exposed at a lower tide stage than were the field inspection photos, and for this reason more detail has been delineated than the field inspector could show. For example, a major change will be noted on the manuscript of the shoreline just inside the mouth of the Togiak River. Shallow areas are instrument delineated also.

36. Offshore Details: None.

37. Landmarks and Aids: None recommended.

38. Control for Future Surveys:

Two photo-hydro signals and two photo-topo stations have been positioned by the radial plot and are shown on the manuscript in proper name and symbol, after they had been field selected, marked, named, and identified.

39. Junctions:

Existing junctions are in agreement, having been compiled simultaneously across these match edges.

40. Horizontal and Vertical Accuracy:

Standard; hor. = under 1/8 mm, and Vert. = 50ft. contour interval. In addition, the 25ft contour (and probably the 75ft) is considered to meet the standards for a 25ft interval, being so close to sea-level datum.

46. Comparison with Existing Maps: None exist.

47. Comparison with Nautical Charts: None exist.

48. Geographic Name List: See separate numbered page.

49. Notes for the Hydrographer: See unnumbered page.

REVIEW REPORT T-9231
Topographic Map
December 10, 1952

62. Comparison with Registered Topographic Surveys. - None

63. Comparison with Maps of other Agencies. -

USGS Alaska Map 18, Goodnews District, Alaska,
1:250,000, 1938 edition.

64. Comparison with Contemporary Hydrographic Surveys. - None

65. Comparison with Nautical Charts. - None.

See item 47
Chart No. 9103, Kuskokwim Bay, 1:200,000, published
Sept. 1916 (2nd edition), last correction 10 October
1950. There are no significant differences between
T-9231 and the chart.

66. Adequacy of Results and Future Surveys. -

Further field edit is not considered necessary prior
to hydrographic surveys in the area.

This map complies with project instructions and is
adequate as a base for hydrographic surveys and the construction
of nautical charts.

HORIZONTAL DATUM ADJUSTMENT

Bristol Bay, Alaska

The subject maps were radial plotted on unadjusted (Field) datum which was subsequently adjusted to the North American 1927 datum by the Division of Geodesy. The datum correction has been computed for each sheet, and stamped into the Descriptive Report on page 1, and on the manuscripts and registered cloth-backed copies near the title block. However, as the title block of each clothback sheet contains the note, "1927 North American Datum", it was necessary to stamp the word, "(Unadjusted)" beside this datum note in the title block of each sheet.

See the special report, Horizontal Control Datum, Ph-8(46), Ph-8A(46), and Ph-8B(46), filed with the Completion Report for the project for details and lists of the maps, reports, and registration copies marked with this adjustment. The following is a list of the maps in the projects:
