A.L. Wardwell, Tampa Photo. Office

LIBRARY & ARCHIVES

DATE January 2, 1959
DATA RECORD

T-9305

Project No. (II): Ph-35A (48) Quadrangle Name (IV):

Field Office (II): Jacksonville, Florida Chief of Party: Harry F. Garber

Photogrammetric Office (III): Tampa, Florida Officer-in-Charge: Arthur L. Wardwell

Instructions dated (II) (III): 30 December 1949

Copy filed in Division of Photogrammetry (IV)

Office Files

Method of Compilation (III): Graphic

Manuscript Scale (III): 1:20,000 Stereoscopic Plotting Instrument Scale (III): Inapplicable

Scale Factor (III): None

Date received in Washington Office (IV): AUG 28 1951

Date reported to Nautical Chart Branch (IV):

Applied to Chart No. Date: Date registered (IV): 3/20/58

Publication Scale (IV):

Geographic Datum (III): N.A. 1927

Vertical Datum (III): MSL

Mean sea level except as follows:

Elevations shown as (26) refer to mean high water

Elevations shown as (29) refer to sounding datum

i.e., mean low water or mean lower low water

Reference Station (III): LORETTO, 1932

Lat.: 30°09' 41.474 (1277.1m) Long.: 81°33' 55.123 (1475.0m) Adjusted

Plane Coordinates (IV):

Y = 

X =

Roman numerals indicate whether the item is to be entered by (II) Field Party, (III) Photogrammetric Office, or (IV) Washington Office.

When entering names of personnel on this record give the surname and initials, not initials only.

Form T-Page 4
Summary to Accompany Topographic Map T-9305

Topographic map T-9305 is one of ten such maps in project Ph-35(48). It covers Julington Creek and a small portion of the St. Johns River and the land area to the eastward.

Project Ph-35(48) is a graphic compilation project. Field work in advance of compilation included the recovery of control, complete shoreline and interior inspection, contouring by planetabular directly on the photographs and the investigation of boundaries and public land lines and geographic names.

This map was compiled at a scale of 1:20,000, using single-lens photographs taken in 1949. It covers 7½' in latitude by 7½' in longitude. The entire map was field edited. After the addition of hydrographic information from source material in the Nautical Chart Branch, the map will be forwarded to the Geological Survey for publication as a standard topographic quadrangle.

Items registered under T-9305 will include the descriptive report, a cloth-mounted lithographic print of the manuscript at a scale of 1:20,000, and a cloth-mounted color print of the published map at a scale of 1:24,000.
FIELD INSPECTION REPORT
QUADRANGLE T-9305
30-07-30 / 81-30-00
Project Ph-35A (48)

Harry F. Garber, Chief of Party

The field work for this quadrangle was done in accordance with Instructions dated 30 December 1949 (Project Ph-35 (48), under the direction of Joseph K. Wilson, Supervisor. Field work in addition to those phases listed on pages 2 and 3, was done by the following personnel:

<table>
<thead>
<tr>

</tr>
<tr>
<td>Cartographic Survey Aid</td>
<td>Recovery</td>
<td>1 March 1950</td>
</tr>
</tbody>
</table>

This report is written in accordance with Paragraph 724 of the Preliminary Edition of the Topographic Manual dated June 1949.

2. AREAL FIELD INSPECTION

There are four small villages within the quadrangle, namely, Bayard, Greenland, Loretto and Sunbeam; none of which are incorporated, Bayard being the largest.

U. S. Highway No. 1 runs in a northwest-southeast direction through the entire quadrangle, and is paralleled by the Florida East Coast Railroad. A small portion of State Highway No. 13 runs through the northwest corner of the quadrangle and the entire area is adequately served by secondary roads connecting these two. U. S. Highway No. 1 was under construction during field inspection. It is to be widened and this fact is called to the attention of the field editor.

The railroad stations at Sunbeam, Greenland, and Bayard were razed several years ago.

A very small portion of the St. Johns River lies in the northwest section of the quadrangle and a small part of Julington Creek lies in the southwestern portion.
The raising of cattle is the chief industry while lumbering and turpentining are carried on in a small scale. There is little cultivation within the quadrangle.

The vegetation consists of about 5% cultivated area, 30% cypress swamp and the remainder palmetto, pine and scrub oak.

No difficulty was encountered in the interpretation of the photographs. The light grey tones denote palmetto, the areas of dark grey tones are cypress swamp, and the spotted grey tones are mixed palmetto and pines.

The field inspection is believed to be complete except for the highway mentioned in the above paragraph.

3. HORIZONTAL CONTROL

(a) No supplemental control was established.
(b) All stations are on the NA 1927 datum.
(c) Stations not established by the USGS are:

<table>

Also AJ-11

Not recovered

(b) Forty miles of fly levels were run beginning and closing at bench marks. The highest closure on any line was 0.37 foot. All lines were adjusted.

(c) The first and last fly level points are 05-1 and 05-34.

(d) Inapplicable.

5. CONTOURS AND DRAINAGE

The contouring was done by planetary methods directly on single-lens photographs, (1:20000 scale), at a contour interval of five (5) feet.

The natural drainage is by Pottsburg Creek in the northern section; by Pablo Creek in the northeastern section; by Goodby's Lake in the northwestern section and Julington Creek in the southwestern portion; all of which drain into the St. Johns River.

A large portion of the quadrangle is very flat and contains numerous isolated cypress swamps and intermittent ponds. The natural drainage of these areas is by seepage. The highest natural elevation within the quadrangle is 66 feet, which is located in the north central part.

6. WOODLAND COVER

The cover was classified in accordance with Paragraph 5433 of the Preliminary Edition of the Topographic Manual dated June 1949.
7. SHORELINE AND ALONGSHORE FEATURES

(a) Only a very small portion of the St. Johns River and Julington Creek fall within the limits of the quadrangle. The banks of the river and creek have undergone no change since photography. The field inspector has made measurements with a steel tape (about 3/4 mile apart) from identifiable points on the photographs to denote the location of the mean high water line.

The shoreline for this quadrangle was inspected on single-lens photographs (1:10,000 scale).

(b) The mean tide range in this portion of the St. Johns River is about 0.8 feet. However the water level is affected more by prevailing winds than any other factor. No attempt was made to locate the mean low-water line because of the presence of water hyacinths during both field inspection and photography.

(c) Inapplicable.

(d) Bluffs

Along this portion of the St. Johns River, bluff heights range from 10 to 15 feet and are depicted by the contours.

(e) All docks, wharves, piers, landing, etc. have been labeled on the photographs.

(f) There is one submarine cable within the limits of this quadrangle; it was located on the photograph.

8. OFFSHORE FEATURES

Inapplicable.

9. LANDMARKS AND AIDS

(a) One landmark (San Jose Golf Club Watertank) is recommended on Form 567 for charting. Copy attached.

(c) One aeronautical aid (Airway Beacon) is recommended on Form 567 for charting. See §57

(d) There are no fixed aids to navigation within the limits of the quadrangle.
10. BOUNDARIES, MONUMENTS AND LINES

These are covered in a "Special Boundary Report", which will be submitted at a later date by Lee F. Beugnet, Cartographic Survey Aid. Eight section corners were recovered and identified.

* Joseph K. Wilson. Filed under project data, Div. of Photogrammetry.

This entire quadrangle falls within Commissioner's District No. 5 in Duval County except for a very small portion of Commissioner's District No. 1 in St. Johns County.

11. OTHER CONTROL

Recoverable Topographic Station established are:

- Airway Beacon, 1950
- Easy, 1950
- Fire, 1950
- Section Corner 28/27 T3S-R27E, 1950
  23/24 T3S-R27E, 1950
  22/23 T3S-R27E, 1950
  21/22 1/2 T4S-R27E, 1950
  23/24 26/25 T3S-R27E, 1950
  1/2 12/7 T4S-R27E-R28E, 1950
  15/16 21/22 T4S-R27E, 1950
  18/17 19/20 T4S-R28E, 1950

Pt. on Line of David Scurry Grant
Pt. on Line of Francis Richard Grant

Acre 1950
12. OTHER INTERIOR FEATURES

All roads and buildings have been classified in accordance with Paragraph 5441 and 5446 of the Preliminary Edition of the Topographic Manual dated June 1949.

All bridge information for the area covered by this report as listed in the U. S. Engineers, List of Bridges Over Navigable Waters in the United States, dated January 1, 1948 was verified in the field, all clearances were carefully measured with a steel tape and the published descriptions and clearances were found to be correct except for the following discrepancies; which were reported to the Local District Engineer and a copy of which is attached to this report.

There is only one bridge over navigable water within the quadrangle limits.

The Florida East Coast Railroad maintains a railroad yard at Bowden. The outer limits of the tracks have been noted on the photographs and a blueprint copy of the railroad yards is submitted with the quadrangle data.

13. GEOGRAPHIC NAMES

This is the subject of a "Special Report", which will be submitted at a later date by Joseph K. Wilson, Cartographer.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA

A Coast Pilot Report for the area will be submitted by Leo F. Beugnet at a later date. There are no other reports or special data, except as noted in Paragraph 10, 12 and 13, for this quadrangle. Copies of the Land Line Flats will be forwarded upon completion of this project.

1 FT = 0.0243806 METER
COMPUTED BY: I. I. Saperstein
DATE: 11 July 1950
CHECKED BY: R. A. Rees
DATE: 2 August 1950
PHOTOGRAHMETRIC PLOT REPORT.

Submitted with T-9303.

31. DELINEATION.

The graphic method was used.

The photographs were of reasonably good scale and of sufficient coverage to insure the delineation of all detail.

The field inspection was adequate.

32. CONTROL.

The identification, density and placement of horizontal control were adequate.

33. SUPPLEMENTAL DATA.

The plans of Florida East Coast R. R. Bowden freight yards were used for reference. GLO plats also used.

34. CONTOURS AND DRAINAGE.

No difficulty was encountered in the transference of the contours to the map manuscript.

All drainage was delineated as shown by the photographs and field inspection.

35. SHORELINE AND ALONGSHORE DETAILS.

The shoreline was delineated from office interpretation of the photographs combined with chained distances indicated at intervals by the field inspector.

Alongshore details, such as piling, boat houses, bulkheads, etc., were indicated on the 1:10,000 photographs of Manuscript T-9302 and were transferred to the manuscript by use of the projector.

Shoreline inspection was adequate.
36. OFFSHORE DETAILS.
   Not applicable.

37. LANDMARKS AND AIDS.
   No unusual methods employed.

38. CONTROL FOR FUTURE SURVEYS.
   Two (2) topographic stations are being submitted on Form 524.
   These topographic stations have been listed and included under Item
   No. 49. Forms 524 for G.L.O. corners under 511. SHR

39. JUNCTIONS.
   A satisfactory junction has been secured with T-9304* on the
   western limits, T-9306 on the eastern limits, and T-9309 on the
   southern limits.

   *Junction made during final review. SHR

   While there is no contemporary survey on the north, junction is
   made with U. S. Corps of Engineers Quadrangle "JACKSONVILLE, 1:62,500,
   edition of 1918" on the north.

40. HORIZONTAL AND VERTICAL ACCURACY.
   No statement required.

46. COMPARISON WITH EXISTING MAPS.
   A comparison was made with U. S. G. & G. S. topographic maps T-5319
   and T-5665, scale 1:10,000, compiled in 1939. Except for minor dis-
   crepancies due to time interval the comparison was good.

   Comparison was also made with U. S. Corps of Engineers Quadrangle
   "ORANGE PARK, 1:62,500 edition of 1918," which disclosed many dis-
   crepancies of a minor character, particularly relative to roads and
   trails.
47. **COMPARISON WITH NAUTICAL CHARTS.**

A comparison has been made with U.S.C.& G.S. Nautical Chart No. 685, scale 1:40,000, published June 1949 (2nd edition) and corrected to January 1950.

Comparison was limited to the extreme western portion of the map manuscript, including the fractional part of the shoreline of the St. Johns River.

The maps listed under Item 46 appear to be the source of most of the topography on the Nautical Chart and the same differences are to be found between the map manuscript and the nautical chart as those mentioned under Item 46.

**ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY.**

None.

**ITEMS TO BE CARRIED FORWARD.**

None.

Approved and Forwarded

Arthur L. Wardwell, Chief of Party
49. NOTES FOR THE HYDROGRAPHER.

Following is a list of topographic stations that may be useful to the hydrographer:

EASY, 1950
FIRE, 1950
ACRE, 1950
51. METHODS.

The field edit of this area was accomplished by standard surveying methods in conjunction with visual inspection. Actual field work started 20 March 1952 and was completed 16 April 1952.

All additions, corrections and deletions, with the exception of the new road (U. S. No. 1) beginning at Bayard, Florida, and running north to the quadrangle limits, are shown on the field edit sheet. (The new road is shown on an attached sketch.)

The reviewer's questions are answered on the discrepancy prints, field edit sheet and in this report.

A legend appears on the field edit sheet which is self-explanatory.

52. ADEQUACY OF COMPILATION.

The map compilation, in general, was adequate and will be complete after field edit data have been applied.

53. MAP ACCURACY.

The horizontal accuracy of the map detail is relatively good.

The accuracy of the contouring is relatively good. See §66

Minor corrections in contours were made in small areas scattered throughout the quadrangle.

54. RECOMMENDATIONS.

None.

55. EXAMINATION OF PROOF COPY.

It is believed that Mr. Robert M. Angus, registered civil engineer and land surveyor, at 102 Hildebrandt Building, Jacksonville, Florida, is best-qualified to examine a proof copy of this work.
charted road. There are numerous paved roads connecting these two lanes which vary in width from 25 to 60 feet. The centerline of these connecting roads has been shown on the sketch. Each of the two lanes consists of asphalt pavement 24 feet wide.

Another new road, now under construction, begins at latitude 30° 10' 40", longitude 81° 33' 07" and runs thence in a northerly direction off the chart. The correct location of this road has been plotted on the field edit sheet from information obtained from the Florida State Road Department. The topography adjacent to the road is at present undergoing radical changes. However, it is believed that within the next three months it will be possible to indicate on a map the cuts and fills accurately enough to correct the contours accordingly.

The horizontal and vertical clearances of the bridge spanning Goodys Creek are as follows: Horizontal Clearance - 33 feet; Vertical Clearance - 11 feet. This is a fixed bridge of concrete construction. The clearances were measured at the center span which is normal to channel.

60. JUNCTIONS.

A planetable traverse was run across the northern limits of this area and corrections to contours were made where necessary.

This quadrangle joins the ARLINGTON quadrangle, U.S.G.S., scale 1:24,000, on the north. A few minor discrepancies exist along this junction. It is believed that these discrepancies can best be compromised by the Washington Office.

Satisfactory junctions have been made with all other adjacent quadrangles.

To:       Mr. J. E. Hundley
          U. S. Coast and Geodetic Survey
          Box 269
          St. Augustine, Florida

Subject: Field Data - T-9305

There is being sent to you subject field data. The advance print showing in red contours and other detail along the north edge of the project, it is understood, was prepared in Washington. We are also sending an ozalid print made here after we compiled the additional 1/2 inch as instructed. A copy of the Arlington quadrangle is also enclosed.

Unfortunately we do not have enough information to make the required adjustments. The original work was compiled for a junction with no contemporary survey. Since that time we have received instructions to compile the additional detail. This junction, as I understand it, will eventually be made with contemporary U. S. Geological Survey work. There has been indicated on the print that shows the additional compilation those places where a junction cannot be effected. You will please note them to be:

1. Grant line junction (Lat. 30° 15'; Long. 81° 34.7')
2. Contour junction (Lat. 30 15 ; Long. 81 34.4)
3. Contour junction (Lat. 30 15 ; Long. 81 32.7)
4. Sec. line junction (Lat. 30 15 ; Long. 81 31.3)
5. Contour junction (Lat. 30 15 ; Long. 81 30.6)

Notes in red pointing to these particular areas are on the ozalid print.

I feel sure that if we had compiled beyond the project limits to begin with the foregoing would not have happened but due to an oversight the proper information was not furnished the compilation office; the 1:24,000 scale Arlington quadrangle was not included in the data. All we had knowledge of was the 1:12, Orange Park quadrangle, 1:62,500 scale, and in such a
To:  Mr. J. E. Hundley
Subj: Field Data - T-9305

situation we do not ordinarily extend the detail beyond the project limits. You are requested while in this area to please reconcile the discrepancies.

If there are any questions, I would be glad to make arrangements for a discussion of this problem with you.

Tampa, Florida

Subject: Supplemental Field Edit Data - Quad. T-9305

The following work has been accomplished in compliance
with your letter dated 31 October 1952:

1. Additional contour corrections have been made at the
   junction of this area with the U.S.G.S. Arlington,
   Quadrangle, 1950 edition. These corrections have
   been shown on field edit sheets number one, number
   two and an acetate overlay sheet. This junction
   is not in good agreement and, in some areas, cannot
   be compromised.

2. Additional contour corrections were made adjacent to
   Florida State Road No. 10, which has been completed
   since the initial field edit of this area. These
   corrections are shown on field edit sheet number one.

3. Information regarding section and grant line junctions
   is shown on field edit sheet number two.

James E. Hundley,
Cartographer

62. **Comparison with Registered Topographic Surveys:**

T-5319  1:10,000  1939  
T-5665  1:10,000  1940

Survey T-5319 shows marsh islets at latitude 30° 08.0' and 30° 08.1' and longitude 81° 36.7' which do not exist according to the field edit for T-9305. There have been cultural changes since these prior surveys.

63. **Comparison with Maps of Other Agencies:**

Orange Park, Fla. (USGS)  1:62,500  1918, reprinted 1942.  
Except for cultural changes, there is close agreement.  
See §47 below

64. **Comparison with Contemporary Hydrographic Surveys:** None.

65. **Comparison with Nautical Charts:**

685  1:40,000  1952, corr. to 53 2/2

Several small piers not shown on the chart. Marsh islets should be deleted as indicated under Item 62. Clearance on bridge at Goodby's Creek should be corrected to agree with this survey.

66. **Adequacy of Results and Future Surveys:**

This survey meets the National Standards of Map Accuracy and complies with project instructions.

67. **Junctions:**

Arlington, Fla. (USGS)  1:24,000  1950

Except as noted below, junction was effected with this quadrangle using a copy without woodland shown.

The following features are shown on T-9305 and do not appear on the published map:

- At longitude 81° 32.5' - an unimproved dirt road  
- At longitude 81° 33.2' - a medium duty road  
- At longitude 81° 36.3' - An extra lane on U. S. Highway 1

It is assumed that these differences result from cultural change and are not discrepancies. (USGS mapping was done in 1948-49; T-9305, as late as 1952.)

The G.S. quad shows streams whereas T-9305 shows swamp without a channel. This is regarded as a difference in mapping practices and of little significance to the map user.

History of Hydrographic Information

for T-9305

Hydrography was added to the map manuscript in accordance with the general specifications of 18 May 1949.

Depth curves and soundings are in feet at mean low water datum and originate with C&GS hydrographic survey H-6296 (1935), 1:20,000. Comparison was also made with Nautical Chart 685, 1:40,000, 1952 corrected to 53 2/2.

The compilation was made by Everett H. Ramey 9 November 1953 and verified by O. Svendsen.
