Form 804

U. S. COAST AND GEODETIC SURVEY
DEPARTMENT OF COMMERCE

DESCRUCTIVE REPORT

Type of Survey: Topographic

Field No.: Ph-59 (50) Office No.: T-9498 N & S.

LOCALITY

State: New Jersey
General locality: Long Beach
Locality: Surf City

1945

CHIEF OF PARTY
Harry F. Garber, Chief of Party
Hubert A. Paton, Baltimore Photo. Office

LIBRARY & ARCHIVES

DATE: September 28, 1955
DATA RECORD

T-9498

Project No. (II): Ph-59(50)

Field Office (II): Pleasantville, N. J.

Photogrammetric Office (III): Baltimore, Md.

Instructions dated (II) (III): 26 May 1950

Chief of Party: Harry F. Gerber

Officer-in-Charge: H. A. Paton

22 June 1950

Copy filed in Division of Photogrammetry (IV)

Office Files.

Method of Compilation (III): Graphic and Kelsh Plotter

Manuscript Scale (III): 1:10,000

Stereoscopic Plotting Instrument Scale (III): 1:10,000

Scale Factor (III): 1.000

Date received in Washington Office (IV):

Date reported to Nautical Chart Branch (IV):

Applied to Chart No.

Date:

Date registered (IV): AUG 23 1955

Publication Scale (IV): 1:24,000

Publication date (IV):

Geographic Datum (III): N.A. 1927

Vertical Datum (III): MSL

Mean sea level except as follows:
Elevations shown as (a) refer to mean high water
Elevations shown as (g) refer to sounding datum
i.e., mean low water or mean lower low water

Reference Station (III): BONNET, 1935

Lat.: 39° 39' 29.469" (908.9 m)

Long.: 74° 11' 41.866" (989.0 m)

Adjusted

Plane Coordinates (IV):

Y =

X =

Roman numerals indicate whether the item is to be entered by (II) Field Party, (III) Photogrammetric Office,
or (IV) Washington Office.

When entering names of personnel on this record give the surname and initials, not initials only.
Areas contoured by various personnel
(Show name within area)
(II) (III)
DATA RECORD

Field Inspection by (II): M. A. Stewart
Date: Oct. 1950

Planetable contouring by (II): M. A. Stewart
Date: Sept.-Oct. 1950

Completion Surveys by (II): Joseph K. Wilson
Date: Dec 1951 to Jan 1962

Mean High Water Location (III) (State date and method of location): 4-16-50, Photogrammetric

Projection and Grids ruled by (IV): TLJ
Date: 1-14-51

Projection and Grids checked by (IV): HDW
Date: 1-16-51

Control plotted by (III): R.M. Whitson
Date: 4-10-51

Control checked by (III): F. J. Tarcza
Date: 4-11-51

Radial Plot by (III): F. J. Tarcza
Date: 5-2-51

Stereoscopic Instrument compilation (III): M.G. Misulia, Stereoplanigraph
Contours in NW corner only.
Date: 30 Oct. 1950

Manuscript delineated by (III): J.C. Richter, L.A. Senasack, J. Honick
Dates: 6-1-51, 6-8-51, 11-3-51

Photogrammetric Office Review by (III): R. Glaser
Date: 11-16-51

Elevations on Manuscript checked by (II) (III):
Date: 11-16-51
PHOTOGRAPHS (III)

3 Bench Marks with T-9497

*No data available for GABE, 1950 listed under item 11- T-9497
NEW JERSEY COAST, Townsend Inlet to Barnegat City

Mapped by the U.S. C. and G. S. from aerial photographs to be taken in 1950
Scale 1:10,000
Summary to Accompany T-9498

Topographic map T-9498 is one of 13 similar maps in project Ph-59(50). This project covers the New Jersey coast from Townsend Inlet north to Barnegat City. T-9498 is one of the three most northerly maps in the project. This map was compiled almost entirely by graphic methods. A small portion of the extreme northwest area of the map was compiled on the stereoplanigraph. The field operations preceding compilation included complete field inspection, the establishment of some additional horizontal control and the determination of numerous elevations for plane-table contouring and to control the stereoplotting instruments vertically. The compilation was at a scale of 1:10,000. The manuscript consists of 2 sheets each 3 3/4 min. in latitude by 7 1/2 minutes in longitude. The entire map was field edited. The map is to be published by the Geological Survey at a scale of 1:24,000 as a standard 7 1/2' topographic quadrangle. The registered copies under T-9498 will include 2 one-half quadrangle cloth-mounted prints at scale 1:10,000 identified as T-9498 N/2 and T-9498 S/2 and a cloth-mounted color print at scale 1:24,000. Hydrographic information furnished by this Bureau, depth curves and soundings, will be included on the color print.
FIELD INSPECTION REPORT
QUADRANGLE T-9498
Project Ph-59

Harry F. Gerber, Chief of Party

The field work for this quadrangle was done under the direction of Mr. George E. Varnadoe, Cartographic Engineer. In addition to Page 3, the work was accomplished by the following personnel:

<table>

2. AREAL FIELD INSPECTION

Barnegat Bay, Manahawkin Bay, tide water creeks and coves, and the low marsh bordering these, comprise approximately seventy five per cent of the area.

A part of the town of Barnegat falls within the quadrangle (on its northern boundary), as well as several towns and municipalities on Long Beach Island - (For a description of this island, see report for T-9502). Except along the highway, causeway and on the island, the area is sparsely settled, being mostly woodland with an occasional small farm. The area is adequately served by a system of hard-surfaced and secondary roads.

The photographs were of good quality and no difficulty was encountered in their interpretation. They being taken when the trees were bare of foliage was especially beneficial when the stereoscope was used.

The field inspection is believed to be complete. However, due to new construction, the field editor should be on the alert for this, especially on Long Beach Island.
3. HORIZONTAL CONTROL

All known horizontal control was searched for and reported on Form 526.

Two standpipes, SURF CITY STANDBINE and HIGHPOINT STANDBINE, were located by four directions with a Wild T 2 theodolite from four or more triangulation stations, using intersection stations for azimuth.

A point was located and identified opposite each photo center (opposite the line of flight), for the beach flight. These points are triangulation stations pricked direct, substitute stations for triangulation, and 4 control points A to D. The control points were located by triangulation methods, observing three or more directions on four or more triangulation stations with the Wild T 2 theodolite.

In addition to stations not established by the U.S.C.G.S. and the aforementioned control points, two stations CONKLIN and VOL - established by the U.S.E.D. - were identified. The order of accuracy is unknown.

The stations reported lost are:

Brant Beach Water Tank
High Point Water Tank

4. VERTICAL CONTROL

All known vertical control was searched for and reported on Form 685A.

(a) Five bench marks were used. They are:

<table>
<thead>
<tr>
<th>Y 6</th>
<th>N.J.C.O.S.</th>
<th>Mon. 5296</th>
</tr>
</thead>
<tbody>
<tr>
<td>P 7</td>
<td>&quot;</td>
<td>&quot; 5298</td>
</tr>
<tr>
<td>S 7</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

(b) 13.2 Miles of differential levels were run with a Wye level to supplement elevations for contouring. The levels began and closed at bench marks. The greatest error of closure was 0.48, and adjustments were prorated according to the number of set-ups.

(c) The first and last level designated level points are: 98-1 to 98-6 and 98-10 to 98-26 (98-7 to 98-9 was used in T-9499.)
5. **CONTOURING AND DRAINAGE**

The contouring was done by plane-table methods directly on single lens 1:10,000 scale photographs at a contour interval of ten (10) feet, east of highway U.S. 9 (N.J. 4) (as indicated on page 2) and by stereoscopic instrument in the Washington Office west of this highway.

The natural drainage from the mainland is by small creeks into the bays, and by seepage on the island.

The highest elevation is west of the highway, in the area contoured by the stereoscopic instruments.

6. **WOODLAND COVER**

Classified in accordance with current instructions.

7. **SHORELINE AND ALONGSHORE FEATURES**

Bulkheads and piers built since the date of photography were located directly on the field photographs by observed directions and distances from nearby identifiable topographic features. It is believed that the photograph scale correction would not appreciably affect these short distances.

(a) Little difficulty was encountered in the delineation of the mean high water line. This line was established on the ocean side by measurements from nearby topographic features.

(b) The low water line was delineated where possible either by visual observation or by measurements from topographic features.

(c) The foreshore was classified as necessary on the photographs.

(d) Docks, wharves, and piers not clearly discernible on the photographs were delineated thereon.

(e) The only submarine cable in the quadrangle is shown alongside the bascule bridge on the Manahawkin, Long Beach Island Causeway.

8. **OFFSHORE FEATURES**

Offshore features not discernible and classified on the photographs were located by sextant fixes.
9. LANDMARKS AND AIDS

(a) Form 567 and a chart section are being submitted covering all landmarks in the area. The positions of two were verified by triangulation.

(c) There are no aeronautical aids within the quadrangle.

(d) Fixed aids to navigation were located in accordance with the project instructions and reported on Form 567.

10. BOUNDARIES, MONUMENTS AND LINES

This will be the subject of a special report to be submitted by Mr. R. L. McGlincshay, Cartographic Survey Aid, General Files, Div. of Photogr.

11. OTHER CONTROL

Recoverable topographic stations are:

    Ago 1936
    Bat 1936
    Blue 1950
    Brick 1950
    Chy. Yellow Frame House 1935
    Gabe 1969-  on 44449
    Lookout Tower 1960
    Rust 1950
    Ship Bottom C. G. Cupola 1935

12. OTHER INTERIOR FEATURES

Roads and buildings were classified in accordance with the current instructions. It is to be noted that in places the highway on Long Beach Island is many lanes wide, due to the old and new highways nearby coalescing and the area between being of the same type structure.

Bridge and cable data are recorded on the photographs. A copy of a letter concerning discrepancies between published and field measurements of a bridge will be found with quadrangle T-9507.

COMPILATION REPORT

T-9498

The photogrammetric plot report covering the area of this survey will be a part of the descriptive report for T-9499.

31. Delineation

The major portion of this survey was compiled by graphic methods; the small area northwest of the dismantled railroad in the northwesternmost part of the survey was compiled in conjunction with Survey T-9497 by Kelsel Stereoplotter in the Washington Office. The contours and elevations were transferred from the Kelsel work sheet to the manuscript during the process of graphic compilation. See p. 2, Desc. Report T-9497, also, p. 3 of this report.

Some difficulty was encountered in the delineation of the area of Mud City and Cedar Creek due to inadequate side lap of the photographs and scanty field inspection. This area should be given special attention during field edit.

32. Control

The identification, density and placement of horizontal control were adequate.

33. Supplemental Data - Div. Photogrammetry General Files

(1) County Engineer's Road map of Ocean County, N.J., April 1950. (Layout of Township and Borough boundary lines)

(2) A.M.S. Long Beach, N.J. quadrangle, dated 1948 (Geographic Names)

(3) N.J. Fish and Game Commission Map No. 8A (Boundary Line of Manahawkin Public Hunting and Fishing Grounds)

34. Contours and Drainage

Reconciliation along the junction between the contours transferred from the Kelsel plotter work sheet with contours compiled from planitable survey in the field was accomplished at the Baltimore Office.

Streams, dunes, and ditches presented no compilation difficulties, but the limits of swamp were not field inspected and require field edit clarification. See Field Edit Report, p. 52.

35. Shoreline and Alongshore Details

The shoreline inspection was adequate for satisfactory completion of the manuscript.

The low water line bordering the Atlantic Ocean was delineated from field data; all shallow and channel lines on the manuscript were delineated from office interpretation of the photographs.
36. **OFFSHORE DETAILS**

   No comment.

37. **LANDMARKS AND AIDS**

   Forms 567 for 4 landmarks and 4 lights have been prepared to accompany this report. The lights were plotted on the manuscript from theodolite angles recorded on Forms 24A, **List of Directions**.

   Forms 567 attached.

38. **CONTROL FOR FUTURE SURVEYS**

   Forms 524 for 9 recoverable topographic stations originating in the field and 2 azimuth marks originating at the compilation office were transmitted to the Washington Office between the 17th and 25th of October 1951. These stations are listed in item 49. All forms 524 on file in Div. Photogrammetry general files.

39. **JUNCTIONS**

   T-9499 to the east
   T-9497 to the west
   T-3502 to the south

   No contemporary survey to the north

   All junctions are in agreement.

40. **HORIZONTAL AND VERTICAL ACCURACY**

   No comment. See item *53, Field Edit Report*.

41. **BOUNDARIES** * See item 52 and 67.

   The boundary line between Union and Stafford Townships has been shown on the manuscript by extending the line between boundary monuments No. 5 and 6 to the Intracoastal Waterway. This is in apparent agreement with the boundary line as shown on the County Engineer's Road Map of Ocean County, the General Highway map of Ocean Co., and the AMS Long Beach, N.J. quadrangle. All of these sources, however, do not agree with the Deed Description of Union Twp. as recorded at the Toms River County Courthouse (copy in "Special Report on Boundaries"). The boundary line could not be plotted from the Deed Description.
41. **BOUNDARIES** (continued)

The boundary line of the Manahawkin Public Hunting and Fishing Grounds has been delineated as field inspected. A portion of this boundary line is in disagreement with the line as presented on Plat No. 8A of the N.J. Fish and Game Commission. This discrepancy is to be resolved by field edit. See Field Edit Report, item 52.

42 thru 45.
Inapplicable.

46. **COMPARISON WITH EXISTING MAPS**

(1) AMS Long Beach, N.J. Quadrangle, scale 1:62,500, edition of 1941, revised 1943.

(2) Survey No. T-5443, scale 1:10,000, June 1936
(3) Survey No. T-5444, scale 1:10,000, July 1935
(4) Survey No. T-5099, scale 1:10,000, June 1936

47. **COMPARISON WITH NAUTICAL CHARTS**

Chart No. 825, scale 1:40,000, July 1946 (3-20-50)

49. NOTES FOR THE HYDROGRAPHER

The following recoverable topographic stations appear on the manuscript:

MON 5, 1950
*GABLE (BAT—S-Cab—1936) 1950 — T: 6399a
*GABLE, 1950
CHIMNEY, 1950
CHIMNEY 1950
*CHIMNEY (AGO-Chy-1936)1950 — T: 6399a
*CHIMNEY (CHY-Yel-Frame-No.-1936)1950 — T: 6399a
LOOKOUT TOWER, 1950
*CUPOLA (Ship Bottom C.C. Cup 1935) 1950 — T: 6399a
SURF AZ MK (1932) 1950
BEACH ARLINGTON AZ MK (1932) 1950

* 1950 geographic position determined by photogrammetric methods differs from previously determined positions; therefore, the date 1950, is retained on manuscript. The 1950 positions supersede the 1935-36 positions.

FIELD EDIT REPORT
Quadrangle T-2498
Project Ph-59(50)

The field edit of this quadrangle was accomplished during the months of December, 1951, and January, 1952.

51. METHODS

The inspection of this quadrangle was done by using a truck, skiff, and on foot. Corrections and additions were applied by standard surveying methods.

Two 1:20,000 scale sheets are submitted with the field edit information, upon which additions, corrections, and deletions have been either indicated or referenced to field photographs. A legend is shown on the field edit sheets which includes the colored inks and symbols used.

A 1:10,000 scale section contains the vertical accuracy test.

52. ADEQUACY OF COMPILATION

The map compilation is adequate, with the exception of a few corrections and additions.

The majority of the buildings which have been added can be attributed to a building boom that is taking place on the beach section. The remainder of the additions are due to some new construction and to buildings omitted during compilation.

Numerous buildings, which were classified by the field inspector as number two buildings, have been deleted. These buildings consisted of small garages, chicken houses and out-buildings that are not of sufficient substantial construction or of a conspicuous nature to warrant delineation.

All vertical bridge clearances were re-measured during this survey and the corrected measurements have been indicated where necessary. In most cases, the vertical clearances were in error by approximately two feet and in one instance the horizontal clearance was found to be in error about thirty-six feet.
A number of changes have been made in the swamp delineation. The field editor has outlined the swamp area in purple where applicable throughout the entire quadrangle.

It was found, when making measurements with a steel tape to identifiable points on the photographs, that the shoreline on the ocean side of Long Beach at Harvey Cedars and Long Beach Park has been slightly changed. The mean high water line is now further inshore. This was caused by the storm of 1950. Other changes in the mean high water line were noted and corrected in Quadrangle T-9499 which was submitted earlier. No appreciable changes were found in the southern portion of the quadrangle.

Mr. Charles P. Cramer of Cedar Run, New Jersey, the local township engineer and surveyor, has verified that the boundary line between Union and Stafford Township is correct as shown, and that it does not extend along Taylor Road as questioned in red on the discrepancy print.

According to the local game warden, Mr. Shropshire of New Gretna, New Jersey, who was in possession of a map of the Manahawkin Public Hunting and Fishing Grounds, and who is thoroughly acquainted with this area, the boundary of the Manahawkin Public Hunting and Fishing Grounds is in error as delineated. He states that it is correctly shown in red on the discrepancy print. Further verification was found in comparing his map with our sheet.

53. MAP ACCURACY

The horizontal positions of the map detail appear to be good.

One vertical accuracy test was run in the northwestern part of the quadrangle on a 1:10,000 scale double-weight matte print. Of the 73 points tested, 74% were in error 1 foot or less; 25% in error 1 foot to 1/2 contour interval; and 1% in error 1/2 to 1 contour interval.

Several small errors of contour expression were corrected.

54. RECOMMENDATIONS

None.
55. EXAMINATION OF PROOF COPY

Mr. T. T. Taylor, civil engineer and surveyor, who has been a resident of the area for forty years, states that he would be willing to examine a proof copy of this quadrangle for possible errors. Mr. Taylor's address is: Brant Beach, New Jersey.

VERTICAL ACCURACY TEST REPORT
Quadrangle T-9498
Project Ph-59(50)

The following tabulation is the result of the vertical accuracy test for this quadrangle. The traverse originated and terminated on level points established at road intersections.

A total of 1.5 lineal miles were traversed by planetable to test 73 points on contours. The horizontal closure was negligible. The vertical closure was 0.3 foot and no adjustment was made.

Of the 73 points tested:

74% were in error 1 foot or less;
25% in error 1 foot to 1/2 contour interval; and
1% in error 1/2 contour interval to 1 contour interval.

</table>

T-9498 supersedes all the above surveys in common areas.

63. **Comparison with Maps of Other Agencies**:

The boundary between Union and Stafford Townships is not in agreement with the boundary as shown on T-9498.

The boundary of the Manakawkin Public Hunting and Fishing Grounds is shown on T-9498 but not on the USE quadrangle.

64. **Comparison with Contemporary Hydrographic Surveys**—None

65. **Comparison with Nautical Charts**:

825, 1:40,000 Intracoastal Waterway, ed. 1946, corr. to 5/11/51.

1216, 1:80,000, ed. 1940, corr. to 4/23/51.

There are no significant differences between the charts and the map.

66. **Adequacy of Results and Future Surveys**—This map complies with all instructions and is adequate as a base for hydrographic surveys and the construction of nautical charts. Results of the vertical accuracy test which are summarized in the attached field edit report are satisfactory. This map complies with the National Standards of Accuracy.

67. **Boundaries**—With reference to item 41, Boundaries, the location of the boundary line between Union and Stafford Townships,
as now shown, has been determined to be correct by the field editor. In addition, the boundary line extended between Monuments 5 and 6 is not in apparent agreement with the map sources as stated. On these maps the boundary follows Taylor Road whereas on the map manuscript, T-9498 N/2, the boundary line runs approximately a quarter mile, more or less, south of and roughly parallel to Taylor Road.
