Remarks:
Summary to Accompany Topographic Map T-9834

Topographic map T-9834 is one of eleven similar maps of Project Ph-61(49). It covers shoreline along the southern shore of Albemarle Sound in North Carolina between Leonards Point and Laurel Point and some land area to the southward.

Project Ph-61(49) is a graphic compilation project. Field work in advance of compilation included the recovery of horizontal control, complete field inspection, the delineation of contours at five-foot interval directly on the photographs by planetable methods, and the investigation of political boundaries and geographic names.

Map T-9834 was compiled at a scale of 1:20,000 using nine-lens photographs taken in 1951. The map was field edited in 1954. With the addition of hydrography the map will be forwarded to the Geological Survey for publication as a standard topographic map.

Crown items registered under T-9834 will be a descriptive report, a copy of the map manuscript at a scale of 1:20,000 and a copy of the published map at a scale of 1:24,000.
2. AREAL FIELD INSPECTION

This area consists of 75% land and 25% water. Roughly, 40% is under cultivation, 50% consists of swampland, and the remaining 10% woodland.

Elevations vary from 1.0 ft. to 20 feet.

The Albemarle Sound is the most prominent natural feature in the area.

The most prominent cultural features are the North Carolina Highway No. 32 and U. S. Highway No. 64.

This is a rural area and the chief industries are agriculture and commercial fishing.

No difficulty was encountered in the interpretation of the photographs.

The field inspection is believed to be complete.

3. HORIZONTAL CONTROL

(a) No supplemental control established.

(b) No datum adjustments were made.

(c) Stations not established by the U.S.C.& G.S. are:

<table>
<thead>
<tr>
<th>Station</th>
<th>Agency</th>
<th>Order</th>
<th>Datum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pipe Station C-1, 1942</td>

</tr>
<tr>
<td>&quot; &quot; E-2, 1942</td>
<td>&quot;</td>
<td>&quot;</td>
<td>&quot;</td>
</tr>
</tbody>
</table>

(Note: Forms 526 were submitted for the above stations for Project Ph-45(49). C.S.I. Card for Pipe Station C 2, 1942 USE Submitted with Ph 45)
(d) A search was made for all known control. Stations reported as "Lost" or "Not Recovered" are:

1. Sleight 2, 1909  
2. Lon, 1917  
3. Laurel Pt. 2, 1917  

Forms 526 were submitted for all of the above stations for Project Ph-45(49). See special report submitted with quadrangle T-9839.

The following stations were identified on the photographs for control of the radial plot:

1. Laurel Pt. Lt. House, 1931 (North of quadrangle)  
2. Pipe Station B-2, 1942  
3. Pipe Station C-2, 1942

4. VERTICAL CONTROL

(a) A search was made for all known vertical control. The following is a list of all bench marks in the quadrangle:

<table>
<thead>
<tr>
<th>Name</th>
<th>Agency</th>
<th>Order</th>
</tr>
</thead>
<tbody>
<tr>
<td>V-245</td>
<td>U.S. Coast &amp; Geodetic Survey</td>
<td>Third</td>

<td>&quot;</td>
<td>&quot;</td>
</tr>
<tr>
<td>Pipe Station B-2</td>
<td>&quot;</td>
<td>&quot;</td>
</tr>
<tr>
<td>U-245</td>
<td>&quot;</td>
<td>&quot;</td>
</tr>
</tbody>
</table>

(b) 29.6 Miles of fly levels were run, beginning and closing on bench marks. The largest error of closure on any line was 0.42 foot. No adjustments were made.

(c) The first and last fly level points were 34-01 and 34-38.

5. CONTOURS AND DRAINAGE

The contouring was accomplished by planestable methods directly on nine-lens photographs, scale 1:20,000, at five-foot intervals.

The natural drainage consists of one creek and its tributaries, i.e., Deep Creek and Davenport Forks.

A large portion of the area is swampland and is known as Big Swamp (formerly Indian Swamp). The natural drainage for this area is by seepage. The highest natural elevation in the area is 20 feet, which is in the extreme northwestern section.
6. WOODLAND COVER

This phase of work was accomplished in accordance with Paragraph 5433A, Page 363, Part II, of the Topographic Manual, Special Publication No. 249.

7. SHORELINE AND ALONGSHORE FEATURES

Most of the shoreline is apparent. There is a small part of the western portion of the shoreline of Albemarle Sound that consists of bluffs 14 feet high.

Appropriate notes appear on the photographs indicating the various types of shoreline.

(a) There is no perceptible periodic tide in the Albemarle Sound. All fluctuations are attributed to wind and rains. The mean high-water line and mean low-water line are synonymous.

All existing piers, docks, etc. are clearly indicated on the photographs.

8. OFFSHORE FEATURES

A few small areas of tree stumps, cypress trees, and fish stakes have been indicated on the photographs.

9. LANDMARKS AND AIDS

One interior landmark was identified on the photographs, i.e. Fire Tower, 1951. A small portion of the bridge spanning the Albemarle Sound appears in the northwest portion of the area. See §58

10. BOUNDARIES, MONUMENTS AND LINES

These are covered in a special boundary report which will be submitted at later date by Mr. James E. Hundleby, Cartographer. This report covers project and is filed in Div. of Photogrammetry.

11. OTHER CONTROL

Recoverable topographic stations established are:

Fire Tower, 1951
Dike, 1951
Pine, 1951
Amos, 1951
Apex, 1951

Also listed under §49

Forms 524 are filed for two boundary monuments of NC Highway and Public Works Commission Reservation. 1952
12. OTHER INTERIOR FEATURES

All roads and buildings have been classified in accordance with paragraphs 5441 and 5446 of Part II, Topographic Manual.

13. GEOGRAPHIC NAMES

This is the subject of a special report which will be submitted at a later date by Mr. James C. Oregan, Cartographic Survey Aid.

14. SPECIAL REPORTS AND SUPPLEMENTAL DATA

None, except as referred to under Items 3, 10 and 13.

PHOTOGRAMMETRIC PLOT REPORT.

21. AREA COVERED.

This photogrammetric plot was for all of Ph-61(h9). Eleven (11) quadrangles, T-9832 through T-9812, on the south shore and south of the west end of Albemarle Sound, North Carolina, comprise Ph-61(h9). Ph-45(h9) adjoins on the east and Ph-20(h7) on the south.

The sketch on Page 13 of this report shows the layout of quadrangles, the distribution of identified control, photograph centers, index of control and the adjoining quadrangles of Ph-20(h7) and Ph-45(h9).

22. METHOD.

Radial Plot:

Map Manuscripts. — The map projections are on vinylite at a scale of 1:20,000, ruled with polyconic projection in black and the North Carolina Lambert Grid in red. The map manuscripts are 7'30" in latitude and longitude.

The positions of the substitute stations were computed and all the control was plotted using dividers and meter bar.

The radial plot was run on the joined map manuscripts because projections and grids joined perfectly; and the manuscripts and templets are vinylite.

Photographs: — The area was photographed with the nine-lens camera at 1:20,000 scale on 17 March 1951. Photographs used in this plot were:

33119 to 33129, inclusive
33135 to 33141, "
33150 to 33157, "
33163 to 33171, "
33180 to 33187, "
33192 to 33205, "
33208 to 33214, "

Templets: — Vinylite templets were made from the photographs using master templet 33566 to correct for paper distortion and chamber distortion.
Closure and adjustment to control -- Control, photograph centers and pass points from radial plots for Ph-20(47) and Ph-45(49) had been retained on base grids that were joined to the prepared manuscripts for laying the plot.

A preliminary radial plot disclosed that "Control Point D" in T-9837 (No. 23 on sketch) "Substitute Point CI-RE-48" and "Substitute Point CI-RE-54A-48" west of T-9839 (Numbers 34 and 35 on sketch) would not hold.

The preliminary radial plot position of "Control Point D" was about 4.55 mm (91 meters) southwest of the field position. It had been located on the "Non-monumented Traverse CRESSWELL, N. C. to LAKE PHELPS" by a "plus" and an offset from Traverse Station D2-SA-17. Examination of the radial plot, photographs and computations indicate that a 300 foot chain length was dropped in chaining from D2-SA-17 to the offset point.

"Control Point D" was discussed with Lt. Allen L. Powell, under whose supervision the "Non-monumented Traverse CRESSWELL, N. C. to LAKE PHELPS" was run. Lt. Powell corroborated our conclusions as to how the points were located and agreed it was possible for Control Point D to be in error and not affect Control Point E. Because the traverse was not monumented it was impossible to check the radial plot position of Control Point D in the field.

The preliminary radial plot positions of Substitute Point "CI-RE-48" (No. 34 on sketch) and Substitute Point "CI-RE-5A" (No. 35 on sketch) were 1.5 mm (30 meters) and 1.3 mm (86 meters) from the field positions. These control points were located from CI-RE-48, not monumented, and CI-RE-5A, monumented and described, which were a part of "Third Order Traverse PLYMOUTH, N. C." Examination of the traverse computations revealed that the signs had been reversed in the position computations for these two substitute points; when corrected they fit the plot.

The final radial plot was started from fixed templets on the north, east and west. The control and pass points from the junction with Ph-20(47) were utilized on the south. The radial plot for T-9832, T-9833, T-9834, T-9835 and T-9842 were completed when the plot was interrupted for a special project. The radial plot was later continued from the west and south and bridged across to quadrangles previously completed.
23. ADEQUACY OF CONTROL.

There was sufficient control for a good radial plot despite the absence of control on two quadrangles, T-9836 and T-9841; and two quadrangles with only one control station, T-9838 and T-9842.

Sixty-four (64) control stations were identified and with the exception of the control discussed in Item 22 (closure and adjustment to control) no problems arose.

24. SUPPLEMENTAL DATA.

Inapplicable.

25. PHOTOGRAPHY.

Photographic coverage was adequate and definition and contrast were good. There was not sufficient tilt to justify further investigation.

26. GENERAL.

A final check was made to insure proper transfer of all pass points, control and photograph centers to the material limits of all map manuscripts. "Dog-ears" for photograph centers needed for compilation were added to complete the preparation of the map manuscripts.

Dates of completion of the radial plot are as follows:

T-9832 and T-9833 on 2 May 1952
T-9834 on 5 May 1952
T-9838 and T-9842 on 22 May 1952
T-9835 and T-9839 on 15 August 1952
T-9836 and T-9837 on 27 August 1952
T-9840 and T-9841 on 19 September 1952

Respectfully submitted,

Milton M. Slavney
Cartographer (Photogrammetry)

COMPUTED BY: I.L. Saperstein

DATE: 14 March 1952

CHECKED BY: R. J. Pate

DATE: 20 March 1952
31. **DELINEATION.**
   Compiled by graphic methods. No unusual methods used.

32. **CONTROL.**
   Control was satisfactory. Placement, density and identification were adequate.

33. **SUPPLEMENTAL DATA.**
   None. \( \textit{See \S 14} \)

34. **CONTOURS AND DRAINAGE.**
   No difficulty was encountered in the delineation of contours and drainage.

35. **SHORELINE AND ALONGSHORE DETAILS.**
   Shoreline inspection was adequate.

36. **OFFSHORE DETAILS.**
   No statement. \( \textit{See \S 57} \)

37. **LANDMARKS AND AIDS.**
   No statement required. \( \textit{See \S 58} \)
38. **CONTROL FOR FUTURE SURVEYS.**

Five (5) Forms 524b are being submitted. The names of the stations have been listed under Item 49.

39. **JUNCTIONS.**

Satisfactory junction with T-9154 on the east.
Satisfactory junction with T-9833 on the west.
Satisfactory junction with T-9837 on the south.
Joins USC of E Quadrangle HERTFORD (water) on the north.

40. **HORIZONTAL AND VERTICAL ACCURACY.**

No statement. \( \text{See } \S 53 \)

41. **BOUNDARIES.**

The county line between Chowan and Washington Counties has been shown according to an Act of the State of North Carolina Legislature passed in 1911. The line was "declared to be the middle of Albemarle Sound, parallel to the shores --". The foregoing quotation is from "Formation of North Carolina Counties 1663-1943" Page 220, submitted with the boundaries report for the project. The maps accompanying said report show the county line passing through the bridge at the draw. This is in error by approximately 400 meters. Field print No. 33180 shows the line relatively correct. The true position was plotted halfway between the pass points (one at each end of the bridge).

46. **COMPARISON WITH EXISTING MAPS.**

Comparison was made with U.S.C. of E. Quadrangle COLUMBIA, N.C., scale 1:125,000, dated 1943. Agreement was fair. \( \text{See } \S 62.4 \)

47. **COMPARISON WITH NAUTICAL CHARTS.**

Comparison was made with U.S.C. & G.S. Nautical Chart No. 1228, scale 1:80,000, dated May 1937, corrected to 2 October 1950. Agreement was good. \( \text{See } \S 65 \)
ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY.

None.

ITEMS TO BE CARRIED FORWARD.

None.

Charles J. Downing
Charles J. Downing

APPROVED AND FORWARDED:

J. E. Waugh, Chief of Party
NOTES FOR THE HYDROGRAPHER.

The following recoverable topographic stations will be useful to the hydrographer:

- FIRE TOWER, 1951
- DIKE, 1951
- PINE, 1951
- AMOS, 1951
- APEX, 1951
51. METHODS

The field edit of this area was accomplished by standard surveying methods in conjunction with visual inspection. Actual field work was completed in March 1954.

Field edit corrections have been shown on the field edit sheet, field photographs 33182, 33197 and in this report.

The reviewer's questions were answered on the discrepancy print when feasible.

A legend appears on the field edit sheet, which is self-explanatory.

52. ADEQUACY OF COMPILATION

The map compilation is adequate and will be complete after the field edit revisions have been applied.

53. MAP ACCURACY

The horizontal accuracy of the map detail is relatively good.

The accuracy of the contouring, in general, is good.

The primary deficiency in contouring was topographic expression.

The majority of the contours have been reshaped either on the field edit sheet or field photographs.

54. RECOMMENDATIONS

* Recommend that item "55 - Examination of Proof Copy" of this report be discontinued for the following reason: It is believed that the field editor does a more thorough job of checking the accuracy of compilation of any area than some uninterested individual.

55.

See item "54"

56. DRAINAGE

Refer to item "5 - Field Inspection Report".

Numerous "feeder" ditches have been deleted from the field edit sheet.
Quadrangle T-9834

57. OFFSHORE FEATURES

Refer to item "8 - Field Inspection Report".

Foul areas, offshore, have been shown on the field edit sheet.

58. LANDMARKS

Refer to item "9 - Field Inspection Report".

FIRE TOWER, 1951 should not be considered for nautical charts. It is, at best, only an interior landmark. Form 567 is submitted.

59. OTHER INTERIOR FEATURES

Refer to item"12- Field Inspection Report".

Reclassification of roads and buildings, where justifiable, has been shown on the field edit sheet.

Numerous additional buildings have been shown on the field edit sheets.

60. JUNCTIONS

Satisfactory junctions have been made with all adjacent contemporary quadrangles.

Washington 25, D. C.

Subject: Compilation of Tram Roads - Ph-45(49) and Ph-61(49)

Ref.: Tampa Photogrammetric Office, letter dated 28 April 1953; Chief, Division of Photogrammetry letter dated 30 April 1953

The features appearing on the map manuscripts, PH-45(49), labeled "Dismantled R.R." were deleted in view of the fact that they were narrow gauge, not graded, they had no destination, they had been abandoned and were becoming covered with a new growth of trees, Cypress, Gum and Pine.

In fact some of these lines that appeared on the maps and on the photographs were almost impossible to see on the ground.

These lines are of a temporary nature only. After they have served their purpose, bringing logs out of the swamp and woods, for which they were constructed, the rails are removed and the line abandoned.

The standard gauge R.R. that ran from Plymouth, N.C. to Columbia, N.C. (labeled dismantled) has also been deleted, in view of the fact that a good part of this abandoned line has been plowed and eventually the entire length of the line will be turned back to the farmers.

Recommend that these features labeled "Dismantled R.R." not be shown on any map manuscript.

James E. Hundley
I recommend that the following objects which have been inspected from seaward to determine their value as landmarks be charted on the charts indicated.

The positions given have been checked after listing by

Richard A. Reece,

J. E. Lough
Chief of Party.

**THIS IS AN INTERIOR LANDMARK ONLY**

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and **nonfloating aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.**

M-2826-3
History of Hydrographic Information
for Map T-9834

Hydrography was added to the map manuscript for T-9834 in accordance with the General Specifications of the Photogrammetry Division dated 18 May 1949.

Depths are in feet at mean low water datum and originate from the following hydrographic surveys:

H-3730, 1:20000, 1915-17 and
H-3766, 1:20000, 1915

Hydrography was compiled by Everett H. Ramey on 27 January 1956 and verified by O. Svendsen on 1 February 1956.

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
