TOPOGRAPHIC MAPPING PROJECT PH - 82
FLORIDA EAST COAST, St. Augustine to New Smyrna Beach
Compiled by the U. S. Coast and Geodetic Survey at scale 1:20,000
from 1:20,000 scale nine-lens photographs taken February, 1952.
(Refer to Air-photo Index 128-C)
Summary to Accompany Descriptive Report

T-9907

Topographic map T-9907 is one of twelve similar maps in Project PH-82. The project covers the east coast of Florida from St Augustine to New Smyrna Beach. T-9907 covers the Marineland-Summer Haven area in the north half of the project.

This is a graphic compilation project. Field work in advance of compilation included complete field inspection and complete planetable contouring.

The map was compiled at 1:20,000 scale. 1:20,000 scale nine-lens were used in field and office work. "N" camera 1:20,000 scale photographs taken in Oct. 1956 were used in field edit and in the office application of field edit changes. The map was corrected to the date of the new photography.

The map will be published by the Geological Survey at a scale of 1:24,000. Items registered under T-9907 will include a Descriptive Report, a positive impression on coronar of the scribed copy of the manuscript and a lithographic print of the Geological Survey quadrangle.

2. AREAL FIELD INSPECTION

The quadrangle lies along the Atlantic Beach in St. Johns and Flagler Counties. The coastline runs in a northwest-southeast direction, being very regular, except where it is broken by Matanzas Inlet.

The area is very sparsely settled, having no towns within its limits. However, there are two major attractions along the beach section - Marineland and Fort Matanzas National Monument.

The marine studios at Marineland present an amazing display of live marine life in their oceanariums. The studios, whose reputation has spread around the world, is a national institution combining recreational appeal with sound scientific and educational value.

Fort Matanzas National Monument is a part of the National Park System and is administered by the National Park Service, United States Department of Interior. Within and near Fort Matanzas National Monument occurred the deciding scenes of the Spanish-French struggle for Florida in the sixteenth century. The monument has an area of about 228 acres, including Rattlesnake Island (where the fort is located) and part of Anastasia Island. It is typical north Florida dune country, with a heavy, low growth of scrub and palmetto behind the wide, hard-packed beach and shifting sand dunes.
There is very little industry carried on within the area. In the western part, there is some logging and cattle raising.

The quality of the nine-lens photographs was good. The field inspection is believed to be adequate.

3. HORIZONTAL CONTROL

(a) No supplemental control was established.

(b) No datum adjustments were made.

(c) There were no stations recovered within the limits of this quadrangle, which were established by other agencies.

(e) A search was made for all known control points. Stations reported as "Destroyed", "Lost" or "Not Recovered" are:

BUENA VISTA, 1872  
CAMP, 1872  
DUFONT, 1906  
HEMMINGS POINT, 1872  
SCOTT, 1923  
SMALL WHITE WATER TANK, 1933

4. VERTICAL CONTROL

(a) Summer Haven Tidal Bench Marks 2, 3, 4, 5 and 6 were recovered. There are no other bench marks within the quadrangle.

(b) Nine and one-half miles of supplemental levels were run with a Wye Level, beginning and closing on bench marks of third-order accuracy or higher, or on previously established level points. The greatest error of closure was 0.37 foot. The line was adjusted.

(c) The first and last fly-level points are 07-1 and 07-6.

Level points 08-4 and 08-11 are recorded in the level book of this quadrangle.

(d) Inapplicable.
5. CONTOURS AND DRAINAGE

The contouring was accomplished by standard planetable methods on 1:20,000 scale nine-lens photographs at an interval of five (5) feet.

Along the beach section, there is an area of many irregular sand dunes, which rise to a height of thirty-six (36) feet. The topographer has made an effort to draw all contours which space provided. In a few areas, however, the contours had to be generalized because of the size of the feature. The five (5) foot contour along the beach was not drawn. This contour is one meter west of the mean high-water line and appropriate notes have been shown on the photographs. The shoreline is constantly changing in this area. (See heading No. 7 for Shoreline Report.)

The western portion of the quadrangle is flat, with the exception of the area along a branch of Pellicer Creek where the terrain is very irregular.

There are many spoil banks along the Intracoastal Waterway. Several of these banks have been added since photography and some of the original ones enlarged. The topographer has outlined the new spoil limits in red.

6. WOODLAND COVER

The woodland cover was divided into three different classifications along the beach section: trees, scrub and open.

The trees are composed of palm and pines which attain a height of about twenty-five or thirty feet. The scrub consists of low scrub oak and palmetto, which has a height of about five feet. The open areas, for the most part, are the tops of the sand dunes.

In the western portion of the quadrangle, there are several areas adjacent to the marshland, which have photographed very dark and appear to be swamp. These are large oak and pine trees.

7. SHORELINE AND ALONGSHORE FEATURES

The shoreline of the entire project was done by Mr. Henry R. Spies, Cartographic Survey Aid. See special report submitted in November, 1952, a copy of which is filed in the Field Inspection Report of Quadrangle T-9911. One (1) copy filed in the Project Completion Report.
8. OFFSHORE FEATURES

There were no offshore features noted. For the accuracy of the location of the mean low-water line, see heading No. 7 above.

9. LANDMARKS AND AIDS

For the nautical landmarks and aids, see special report by Henry R. Spies (Heading No. 7).

One aeronautical aid (AIRWAY BEACON NO. 28, 1934) was recommended on Form 567. There are no interior landmarks. Destroyed (see Form 567-1957).

10. BOUNDARIES, MONUMENTS AND LINES

3) Grant corners recovered during field edit.

There were no section corners recovered within the quadrangle. However, one point on a section line was picked on contour photograph No. 34961. Form M-2226-12 is not submitted.

The report on boundaries will be the subject of a special report, which will be submitted at a later date.

11. OTHER CONTROL

Form 524 is submitted for three topographic stations, all of which have been reported as landmarks on Form 567.

No photo-hydro stations were established.

12. OTHER INTERIOR FEATURES

All roads have been classified in accordance with the Topographic Manual. Buildings to be shown have been circled in red on the control set of Photographs. Some new construction has been started at Marineland along the eastern side of the Intracoastal Waterway. The field editor should check for new developments in this area.

One bridge and overhead transmission cable clearance have been shown on photograph No. 34978 at Matanzas Inlet.

A copy of the letter to the District Engineer on bridge discrepancies is included with the Special Shoreline Report.
13. **GEOGRAPHIC NAMES**

This will be the subject of a special report, which will be submitted at a later date.

14. **SPECIAL REPORTS AND SUPPLEMENTAL DATA**

A Coast Pilot Report, Shoreline Report, Boundary Report and Geographic Names Report will be submitted as special reports for the entire project.

1 FT = 30480.06 METER
COMPUTED BY J. C. CREGAN  DATE 31 March 1953  CHECKED BY J. C. RICHTER  DATE 23 June 1953
The Photogrammetric Plot Report is a part of the Descriptive Report for T-9904.

31. DELINEATION

This manuscript was delineated by graphic methods. Field inspection was done on 1952 mine-lens photographs. 1956 single lens photographs were used to delineate changes since field inspection.

32. CONTROL

The control on this manuscript is considered adequate.

33. SUPPLEMENTAL DATA

34. CONTOURS AND DRAINAGE

No comment.

35. SHORELINE AND ALONGSHORE DETAILS

Shoreline inspection was adequate. The low water line was based on data furnished by the field party.

36. OFFSHORE DETAILS

No comment.

37. LANDMARKS AND AIDS

Forms 567 are being submitted for 4 landmarks, one aid to navigation, and one aeronautical aid to be charted. Form 567 is being submitted for 10 aids to be deleted.

Since the date of field inspection, all aids to navigation, except one, have been moved or discontinued. One aid with unchanged position has been shown on this Manuscript.
38. **CONTROL FOR FUTURE SURVEYS**

Forms 521 are being submitted for one AZ MK, 2 landmark tanks, and one tower building at Marineland.

39. **JUNCTIONS**

Junctions have been made to the south with T-9903, to the west with T-9906 and to the north with an extension of T-9905. An all water area is to the east.

40. **HORIZONTAL AND VERTICAL ACCURACY**

No comment.

41. **PUBLIC LAND LINES**

On the beach north of Matanzas Inlet, the N/S line between Sections 11 and 12 could not be positioned exactly. The plat does not show a corner on land in this area.

At Summer Haven, 2 grants could not be exactly positioned. (They were shown for use by the field editor in recovery.)

The county map shows section lines between the beach and mainland but none appear on the plats.

The length of J. M. Hernandez Grant (39) will not fit. The photograph appears to show lines which may be the grant lines, but orientation will not fit with the adjacent grants.

42-45. Inapplicable.

46. **COMPARISON WITH EXISTING MAPS**

Comparison has been made with AMS series V747 Matanzas Fla. quad.

47. **COMPARISON WITH NAUTICAL CHARTS**

Comparison has been made with Intracoastal Waterway Charts Nos. 842 and 843, scale 1:40,000, corrected through notices to mariners to Sept. 8, 1956, first published 1952.

Items to be applied to nautical charts immediately: None

Items to be carried forward: None.

Respectfully submitted
13 November 1956

Approved and forwarded

FIELD EDIT REPORT
Project 24170(6082)
Quadrangle T-9907

The field edit of this quadrangle was accomplished during the months of June and July 1957.

51. METHODS

The inspection of the quadrangle was accomplished by traversing all passable roads by truck, walking to other areas which required special attention, and by skiff along the waterways. Instructions were followed in accordance with letter to Baltimore District Office, dated 9 November 1956, 731-mkl. Standard surveying methods were used for other corrections and additions.

All additions, corrections and deletions have either been indicated on the field edit sheet, referenced to the field photographs, or answered directly on the discrepancy print. A legend, describing the colored inks used, is shown on the field edit sheet. Purple ink was used for additional information on the photographs and on the discrepancy print. Some of the original field inspection in the southern portion of the quadrangle was done in purple ink, but since all of the field edit corrections are shown on the 1956 photographs with the exception of a few contours at Summer Haven, it was felt that the compiler would have no difficulty in differentiating between the original field inspection and the field edit surveys.

One 1:20,000 scale print is submitted as a field edit sheet.

Nineteen photographs, on which field edit information has been shown, are listed as follows:

<table>
<thead>
<tr>
<th>56-W-3723</th>
<th>56-W-3931</th>
<th>34978A</th>

</tr>
</tbody>
</table>

52. ADEQUACY OF COMPILATION

The compilation was adequate with the exceptions and additions indicated by the field edit data. It is believed that the compilation will be complete after these are applied.
The quadrangle, as a whole, has changed very little since the original field inspection. Florida State Highway A1A has been changed in two places and a new fixed bridge has been constructed across Matanzas Inlet. The overhead and submarine cables at Matanzas Inlet were not changed. The clearances for the new bridge are shown on photograph 56-W-3828.

The clearances of five areas, where an overhead power cable crosses, were requested on the discrepancy print. There is no cable at the crossing near Fort Matanzas, but clearances for the four other locations have been shown. Your attention is invited to the fact that at all four locations, the water is navigable only for small boats.

The triangulation station, AIRWAY BEACON NO. 28, 1934, has been destroyed. See form 526.

All fixed aids to navigation, within the limits of this quadrangle, were re-located during the field edit. All of these aids were located by the direct method on the 1956 1:10,000 scale photographs with the exception of Matanzas River Daybeacons 104, 105 and 106. There was no 1:10,000 scale photographic coverage for the three southern daybeacons. These daybeacons were located by angles and distances from photographic points. Form M-2226-12, 24a and 567 are submitted with the field edit data.

The woodland, along the beach area north of Matanzas Inlet, was questioned on the discrepancy print. Most of this area, with the exception of the portion near the government property which is definitely trees, is a borderline case. The questioned section consists of scrub oak and palmetto which is very thick and attains an height of four to six feet. It has been recommended on the discrepancy print that no change be made.

Three grant corners were recovered and identified during the field edit. Nothing could be found along sections 11 and 12, T-9S - R-30E. Information from local surveyors state that extension of section and grant lines across the Matanzas River will show considerable errors. This is due to several facts: 1. Original methods of determining distances across the water portion. 2. Surveys made by Mr. Clements in 1834 and re-surveys made by Mr. Randolph in about 1850. The surveys did not always agree, and in some instances were several chain lengths apart.

53. MAP ACCURACY

The horizontal positions of the map detail appear to be good. No standard vertical accuracy test was requested and none was made.
The contours were visually checked and were found to adequately depict the terrain. Since the original contouring, a few areas have changed due to new construction. These areas were revised during the field edit.

54. RECOMMENDATIONS

None

55. EXAMINATION OF PROOF COPY

Mr. D.D. Moody, registered land surveyor and a resident of the area for fifty years, has agreed to examine a proof copy of this quadrangle for possible errors. Mr. Moody's address is: 401 North Anderson Street, Bunnell, Florida.

All geographic names were verified as shown on the advance print of the manuscript. The name SUMMER HAVEN RIVER is not correct. No local usage of this name could be found.

</tbody>
</table>

All fixed aids to navigation within the limits of T-9907 were re-located during the field edit. The new data was not applied to the charts.

The Intracoastal Waterway Channel is incorrectly positioned between lights 78 and 61 on chart 842. Corps of Engineers blueprints were used to provide the channel for the USGS quadrangle.

MHW cable clearance data submitted by the field editor includes the following (1) 50 ft for the cable at Summer Haven (2) 35 ft for the cable across the Matanzas River - located approximately 2000 ft off Summer Haven (3) 65 ft for the north cable at Marineland (4) 55 ft for the south cable at Marineland.

The field editor reports there is no overhead cable approximately 1500 ft south of Fort Matanzas as shown on chart 842.

A clearance of 39 ft. was submitted by the field inspector in 1952 for the overhead cable adjacent to the Matanzas Inlet Bridge.
Data submitted by the field editor for the fixed bridge across Matanzas Inlet is as follows (1) horizontal clearance 41.5 ft MHW (2) vertical clearance 12 ft MHW.

66. Adequacy of Results and Future Surveys

This map complies with the National Standards of Map Accuracy and Bureau requirements.

67. Public Land and Grant Lines

Three land grant corners and two points on line were recovered by the field editor.

The land line "net" (Public Land and Grant Lines) is considered unreliable. Some lines were left off the manuscript.

The line between Sections 13 and 24, T9S R30E was applied from the supplemental plat dated April 1944.

The small grant sections (37, 38, 19, 250) at Summer Haven were adjusted locally to the recovered south corner of section 37, G. W. Peppard Grant.

Only the south line of section 37, G. W. Peppard Grant (T10S R31E) is shown.
